

disagrees with this comment. The volume of water removed by each LNG ship as a percentage of the total amount of the Bay is negligible and would not increase salinity in the Chesapeake Bay.

One commenter stated the impact of seawater intake for ballast from the increase in LNG tankers did not address the impact to aquatic organisms. The Coast Guard disagrees with this comment. The potential impacts to the aquatic organisms were addressed in Section 7 of the Supplemental EA. The calculated seawater intake on the LNG vessels is 0.6 feet per second. This velocity is similar to the 0.5 feet per second identified by the National Marine Fisheries Service as minimizing entrainment and impingement of aquatic organisms.

Supplemental Environmental Assessment

We prepared a Supplemental EA to identify and examine the reasonable alternatives and assess their potential environmental impacts. The Supplemental EA examined the potential effects associated with the incremental increase in LNG ship traffic within U.S. territorial waters on natural, cultural, and human resources.

Our preferred alternative is to issue a LOR with conditions. This action will assure that the waterway is suitable, safe, and environmentally sound for the increased LNG vessel traffic resulting from the Cove Point Expansion Project. This preferred alternative as well as other alternatives are further described in the supplemental EA.

The Coast Guard determined the Supplemental EA adequately discusses the environmental issues and impacts of the proposed action. It provides sufficient evidence and analysis for determining that an environmental impact statement is not required. Therefore, a Finding of No Significant Impact was issued for the preferred alternative of the proposed action.
