#### SUPPLEMENTARY INFORMATION:

##### I. Funding Opportunity Description

###### A. Background

FDA intends to establish a cooperative agreement to create the WCFS to address these issues through the development of approaches and data critical to understanding the risks associated with the interface between production agriculture and food protection. Such knowledge is critical to the development of scientifically validated "best practices" for mitigating those risks at the production (versus processing) level. In establishing this cooperative agreement, FDA recognizes the importance of agricultural practices in the Western states, an increasingly important food producing region for fruits, vegetables, specialty crops, and dairy products; and a key point of entry for imported foods. The development of an integrated collaborative food protection research/education/outreach program in this region will benefit both consumers and producers nationwide.

###### B. Program Research Goals

A proposal is being solicited to establish and operate a collaborative center that is designed to meet the objectives of the RFA. The proposal should include information on both the structure and administration of the center and the approaches that will be used to establish robust and sustainable regional, national, and international research and outreach collaborations (including collaborations with the agency's other Centers of Excellence; other Centers at UCD, such as the Center for Produce Safety; and other components of the University of California system), as well as strategies for cultivating additional base support for the center.
