

exempted fishery within regulated mesh areas. Because one of the research goals is to use the information to expand the whiting fishery exemption area, staying within this 5-percent multispecies bycatch cap would be useful for future management decisions based on this research. No NE multispecies would be landed for sale, with the exception of whiting. Additionally, this EFP would include an exemption from multispecies minimum size limits at § 648.86 for sampling purposes only. This exemption would allow sampling of undersized species prior to their discard.

Whiting caught during the research would be landed and sold, up to the current possession limit, to provide additional funding for the project. All other organisms, including whiting with high expected survival return rates, would be released as quickly and carefully as practicable. The applicant may request minor modifications and extensions to the EFP throughout the year. EFP modifications and extensions may be granted without further notice if they are deemed essential to facilitate completion of the proposed research and have minimal impacts that do not change the scope or impact of the initially approved EFP request. Any fishing activity conducted outside the scope of the exempted fishing activity would be prohibited.
