

complexes and geographic locations where Navy training occurs. The primary tools available for monitoring include visual observations, acoustic monitoring, photo identification and tagging, and oceanographic and environmental data collection.

A list of proposed mitigation measures and standard operating procedures are described in the application for the proposed training operations. These mitigation measures include personnel training for watchstanders and lookouts in marine mammal monitoring, operating procedures for collision avoidance, specific measures applicable to the mid-Atlantic during North Atlantic right whale migration, and a series of measures for specific at-sea training events including surface-to-surface gunnery, etc. A detailed description of the monitoring and mitigation measures are provided in the applications.

Information Solicited

Interested persons may submit information, suggestions, and comments concerning the Navy's request (see **ADDRESSES**). All information, suggestions, and comments related to the Navy's Cherry Point Range Complex request and NMFS' potential development and implementation of regulations governing the incidental taking of marine mammals by the Navy's training activities will be considered by NMFS in developing, if appropriate, the most effective regulations governing the issuance of letters of authorization.

POLICY JUSTIFICATION

Republic of Korea – Various Munitions and Weapon Systems

The Republic of Korea has requested a possible sale of 125 AIM-120C-7 Advanced Medium Range Air-to-Air Missiles (AMRAAM), 14 AIM-120C Captive Air Training Missiles, 2 AIM-120C Dummy Air Training Missiles, 35 AGM-65G MAVERICK Missiles, 6 TGM-65G MAVERICK Training Missiles, 280 Joint Direct Attack Munition (JDAM) tail kits, 2 JDAM Load Build Trainers, 2 GBU-24 Laser Guided Bomb Units (PAVEWAY III), 32 GBU-12 Laser Guided Bomb Units (PAVEWAY II), 2 GBU-10 Laser Guided Bomb Units (PAVEWAY II), and 12,700 RR-170 Radar Jamming Chaff, containers, bomb components, spare/repair parts, publications, documentation, personnel training, training equipment, contractor technical and logistics personnel services, and other related support elements. The estimated cost is \$200 million.

The Republic of Korea is one of the major political and economic powers in East Asia and the Western Pacific and a key partner of the United States in ensuring peace and stability in that region. It is vital to the U.S. national interest to assist our ally in developing and maintaining a strong and ready self-defense capability, which will contribute to an acceptable military balance in the area. This proposed sale is consistent with those objectives. No foreign policy or military developments affect this proposed sale.

The proposed sale of weapon system support is being addressed in conjunction with the planned Direct Commercial Sale of 21 additional F-15K fighter aircraft. The proposed sale will significantly enhance the Korean Air Force's current air-to-air intercept capability to equal capabilities within their region of operations. Korea will have no difficulty absorbing these additional missiles into its armed forces.

The principal contractor is the Raytheon Corporation in Tucson, Arizona. There are no known offset agreements proposed in connection with this potential sale.

There are four U.S. Air Force pilots and five maintenance Extended Training Service Specialists in the Republic of Korea. They are expected to remain for the next five years.

There will be no adverse impact on U.S. defense readiness as a result of this proposed sale.

Transmittal No. 08-45**Notice of Proposed Issuance of Letter of Offer
Pursuant to Section 36(b)(1)
of the Arms Export Control Act****Annex
Item No. vii****(vii) Sensitivity of Technology:**

1. The AIM-120C-7 Advanced Medium Range Air-to-Air Missile (AMRAAM) is a new generation air-to-air missile. The AIM-120C-7 AMRAAM hardware, including the missile guidance section, is classified Confidential. State-of-the-art technology is used in the missile to provide it with unique beyond-visual-range capability. Significant AIM-120C-7 features include a target detection device with embedded electronic countermeasures, an electronics unit within the guidance section that performs all radar signal processing, mid-course and terminal guidance, flight control, target detection and warhead burst point determination. Anti-tampering security measures have been incorporated into the AIM-120C-7 to prevent exploitation of the AMRAAM software.

2. The AGM-65G/H MAVERICK air-to-ground missile has an overall classification of Secret. The Secret aspects of the MAVERICK system are tactics, information revealing its vulnerability to countermeasures, and counter-countermeasures. Manuals and technical documents, which are necessary for operational use and organizational maintenance have portions that are, classified Confidential. Performance and operating logic of the countermeasures circuits are Secret.

3. The PAVEWAY II/III series of laser guided bombs consists of a guidance kit that converts existing unguided free-fall bombs into precision-guided "smart" munitions. At the core of each PAVEWAY II/III Munition Kit is a dumb bomb. A laser guidance kit is integrated with each dumb bomb to add the requisite level of accuracy. The kit consists of a computer-controlled group at the front end of the weapon and an airfoil group at the back. When a target is illuminated by a laser-either airborne or ground-based-the guidance fins react to signals from the control group and steer the weapon to the target. This precision-guided munition offers improved accuracy over free-fall bombs, thus providing the potential for reduced collateral damage.

4. The Joint Direct Attack Munition (JDAM) is a guidance kit that converts existing unguided free-fall bombs into precision-guided “smart” munitions. By adding a new tail section containing an Inertial Navigation System (INS)/Global Positioning System (GPS) guidance to unguided bombs, the cost effective JDAM provides highly accurate weapon delivery in any “flyable” weather. The INS, using updates from the GPS, helps guide the bomb to the target via the use of movable tail fins. Weapon accuracy is dependent on target coordinates and present position as entered into the guidance control unit. After weapon release, movable tail fins guide the weapon to the target coordinates. In addition to the tail kit, other elements in the overall system that are essential for successful employment include:

- 1) Access to accurate target coordinates.**
- 2) INS/GPS capability.**
- 3) Operational Test and Evaluation Plan.**

5. Additional sensitive areas include operating manuals and maintenance technical orders containing performance information, operating and test procedures, and other information related to support operations and repair. The hardware, software, and data identified are classified to protect vulnerabilities, design and performance parameters and other similar critical information.

6. If a technologically advanced adversary were to obtain knowledge of the specific hardware in the proposed sale, the information could be used to develop countermeasures which might reduce weapon system effectiveness or be used in the development of a system with similar or advanced capabilities.
