

activities consistent with an area's VRM Management Class as established in the RMP. It is not BLM policy to determine, at the RMP level, which land uses or activities to restrict based on VRM Management Class. Rather, BLM must consider, at the site specific activity level, all uses proposed for an area with a given VRM Management Class and determine if those uses would be consistent with the objectives for that Class.

Therefore, the RMP will be clarified by removing the following restrictions (this will not impact RMP decisions related to designated critical habitat, Wilderness Study Areas (WSAs), or Areas of Environmental Concern (ACECs)):

- VRM Management Class II areas are closed to leasable mineral entry under the Proposed Plan (PRMP/FEIS p. 2-77). Removal of this restriction will result in an additional 27,387 acres open to leasable mineral entry in the planning area (34,993 acres total).

- VRM Management Class II areas are exclusion areas for renewable energy under the Proposed Plan (PRMP/FEIS p. 2-110). Removal of this restriction will result in an additional 27,327 acres available for renewable energy in the planning area (34,259 acres total).

- VRM Management Class II areas are avoidance areas for all land use authorizations under the Proposed Plan (other than renewable energy which is described above) (PRMP/FEIS p. 2-110). Removal of this restriction will allow BLM to consider issuing land use authorizations on approximately 31,600 acres of land designated as VRM Management Class II in the planning area, outside of designated critical habitat, WSAs, and ACECs.

All future development in the planning area would adhere to the VRM Management Class objectives established in the RMP (PRMP/FEIS p. 2-57). For example, VRM Class II objectives require that the existing character of the landscape be retained and that the level of change to be low. In order to meet these objectives, BLM expects that the level of development in VRM Management Class II would be very minimal. BLM will utilize visual resource design techniques and best management practices to mitigate the potential visual impacts. Visual contrast ratings will be required for all major projects proposed for VRM Management Class I, II, and III areas which have high sensitivity levels. In areas where VRM Management Class objectives cannot be met through design techniques and/or best management practices, BLM has the

authority to deny the project. (PRMP/FEIS p. 2-57 and 2-58).

State Director, California.
