SUPPLEMENTARY INFORMATION:

I. Abstract

National Oceanic and Atmospheric Administration (NOAA) collects information to implement the International Dolphin Conservation Program Act (Act). The Act allows entry of yellowfin tuna into the United States (U.S.), under specific conditions, from nations in the International Dolphin Conservation Program that would otherwise be under embargo. The Act also allows U.S. fishing vessels to participate in the yellowfin tuna fishery

in the eastern tropical Pacific Ocean (ETP) on terms equivalent with the vessels of other nations. NOAA collects information to allow tracking and verification of “dolphin safe” and “non-dolphin safe” tuna products from catch through the U.S. market.

The regulations implementing the Act are at 50 CFR parts 216 and 300. The recordkeeping and reporting requirements at 50 CFR parts 216 and 300 form the basis for this collection of information. This collection includes permit applications, notifications, tuna tracking forms, reports, and certifications that provide information on vessel characteristics and operations in the ETP, the origin of tuna and tuna products, and certain other information necessary to implement the Act.

II. Method of Collection

Paper applications, other paper records, electronic and facsimile reports, and telephone calls are required from participants. Methods of submittal include transmission of paper forms via regular mail and facsimile as well as electronic submission via e-mail or an ETP site (password protected).

SUPPLEMENTARY INFORMATION:

I. Abstract

The National Marine Fisheries Service (NMFS) requires U.S. fishing vessels registered for use with, or any U.S. citizen issued with, a Special Coral Reef Ecosystem Fishing Permit (authorized under the Fishery Management Plan for Coral Reef Ecosystems of the Western Pacific Region) to complete logbooks and submit them to NMFS. The information in the logbooks is used to obtain fish catch/fishing effort data on coral reef taxa (level of classification such as family, genus, or species, depending on level applicable for management) harvested in designated low-use marine protected areas and on potentially-harvested coral reef taxa in waters of the U.S. exclusive economic zone in the western Pacific region. These data are needed to determine the condition of the stocks and whether the current management measures are having the intended effects, to evaluate the benefits and costs of changes in management measures, and to monitor and respond to incidental takes of endangered and threatened marine animals.

II. Method of Collection

Information is submitted to NMFS in the form of paper logbook sheets and paper transshipment forms within 30 days of each landing of coral reef harvest.
