

for 3,000 trials of drugs and biologics and 445 trials of medical devices each year. Each initial registration is estimated to take 7 hours and each of the subsequent 8 updates to the record are estimated to take 2 hours, resulting in an annual burden of 79,235 hours. It is estimated that there will be voluntary submissions of registration information for 6,000 trials of drugs and biologics, 545 trials of devices, and 5,280 trials of other types of medical interventions. Using the same hour estimates as for mandatory registration, the burden associated with voluntary registrations is estimated at 271,975 hours, bringing the total registration burden to 351,210 hours. In the first year of operation, it is estimated that there will be an additional burden of 84,150 hours associated with the updating of information for 7,000 trials of drugs and biologics and 650 trials of medical devices that were previously registered in the databank and ongoing as of December 26, 2007 (90 days after enactment). It is estimated that such trials will require one update of 3 hours to bring them into compliance with the new law (FDAAA) and 4 subsequent updates of 2 hrs each. Results reporting is required only for those applicable clinical trials of drugs, biologics, and devices that are subject to the mandatory registration requirements of FDAAA and for which the product(s) under study have been approved or cleared by the FDA. It is estimated that results reporting will be required for 1,645 trials of drugs and biologics and 375 trials of medical devices each year. Initial submission of results information is estimated to require 10 hours, and each result submission is expected to require two updates that take 5 hours each. The total burden for results reporting is therefore estimated at 40,400 hours per year. There are no capital costs to report.
