[FWS-R4-ES-2008-N0131; 41545-1261-0000-D2]

Interagency Florida Panther Response Plan**AGENCY:** Fish and Wildlife Service, Interior.**ACTION:** Notice of availability: environmental assessment and finding of no significant impact for the Interagency Florida Panther Response Plan.**SUMMARY:** We, the Fish and Wildlife Service, announce our decision and the availability of the Final Environmental Assessment (EA) and Finding of No Significant Impact (FONSI) for our Interagency Florida Panther Response Plan. Our EA considers alternatives for managing conflicts between humans and the endangered Florida panther (*Puma concolor coryi*), in accordance with the National Environmental Policy Act of 1969, as amended.**ADDRESSES:** A copy of the EA and FONSI may be obtained by writing to: Layne Hamilton, Refuge Manager, Florida Panther and Ten Thousand Islands National Wildlife Refuges, 3860 Tollgate Boulevard, Suite 300, Naples, FL 34114, or Elizabeth Souheaver, Area II Supervisor, Southeast Regional Office, Fish and Wildlife Service, 1875 Century Boulevard, Suite 420, Atlanta, GA 30345. The EA and/or FONSI may also be accessed and downloaded from the Service's Internet Web site: <http://www.fws.gov/verobeach/>.**FOR FURTHER INFORMATION CONTACT:** Ms. Layne Hamilton, at address in **ADDRESSES**, or at 239-353-8442, extension 227 (telephone), or Ms. Elizabeth Souheaver, Area II Supervisor, at address in **ADDRESSES**, or at 404-679-7163 (telephone).**SUPPLEMENTARY INFORMATION:** With this notice, we announce our decision and availability of the final EA and FONSI for the Interagency Florida Panther Response Plan in accordance with the National Environmental Policy Act's (NEPA's) implementing regulations at 40 CFR 1506.6 (b). We released a draft of the plan to the public as a Draft EA for "Guidelines for Living with Florida Panther and the Interagency Florida Panther Response Plan," and requested comments in a notice in the **Federal Register** on May 25, 2006 (71 FR 30156). To improve the quality and credibility of the scientific information, we also conducted a formal peer review process for the draft plan. Responses to public,tribal, and peer review comments were included in the Revised EA appendices. On November 2, 2007, we released the Revised EA and the Interagency Florida Panther Response Plan to the public, requesting comments via a **Federal Register** notice (72 FR 62256). We have included responses to specific comments in the Final EA appendices. We have coordinated this proposal with the National Park Service, the Florida Fish and Wildlife Conservation Commission, and local Indian tribes.The Draft, Revised, and Final EAs identified and evaluated three alternatives for managing the conflicts between humans and the endangered Florida panther (*Puma concolor coryi*). Alternative A (Preferred Action) manages human-panther interactions with an interagency response team and an established plan that prioritizes public safety and evaluates each situation by analyzing panther behavior and human activity. Alternative B (No Action) does not utilize an interagency team or a response plan, but responds to human-panther interactions on a case-by-case basis without established protocols or guidelines. Alternative C includes a response team and a plan that differs from Alternative A by providing rigid protocols based on frequency of panther sightings and proximity to human-occupied structures, without considering panther behavior or influences of human activity on panther behavior. The EA consists of a thorough analysis of the environmental, social, economic, and cultural resource considerations for each alternative.

The FONSI documents the selection of Alternative A. This alternative was selected over the other alternatives because it utilizes the best available science in a consistent manner to manage human-panther interactions. Under this alternative, the Response Team's responsibility is to review information related to human-panther interactions, classify these situations based on the documented behavior of the panther, provide an action plan to the responsible agencies, and take approved and appropriate actions. The plan provides the responding officials with the flexibility to address emergency situations swiftly. Also, public outreach and education are an important element of this proposal, recognizing the importance of teaching people how to safely live and recreate in panther habitat. There are no conflicts with local, State, regional, or Federal plans or policies.

Authority: We provide this notice under NEPA regulations at 40 CFR 1506.6.

Dated: October 6, 2008.

Cynthia K. Dohner,*Deputy Regional Director, Southeast Region.*

Marine Mammal Protection Act; Stock Assessment Report**AGENCY:** Fish and Wildlife Service, Interior.**ACTION:** Notice of availability of final revised marine mammal stock assessment report for the northern sea otter stock in Washington State; response to comments.**SUMMARY:** In accordance with the Marine Mammal Protection Act (MMPA), the Fish and Wildlife Service (Service) has incorporated public comments into a revision of the marine mammal stock assessment report for the northern sea otter (*Enhydra lutris kenyoni*) stock in Washington State. The 2008 final stock assessment report is now complete and available to the public.**ADDRESSES:** Send requests for printed copies of the final stock assessment report to: Manager, U.S. Fish and Wildlife Service, Western Washington Fish and Wildlife Office, 510 Desmond Drive SE, Suite 102, Lacey, WA 98503; (360) 753-9440. Copies of the final revised stock assessment report are also available on the Internet in Adobe Acrobat format at <http://www.fws.gov/westwafwo>.**SUPPLEMENTARY INFORMATION:** One of the goals of the MMPA (16 U.S.C. 1361-1407) is to ensure that stocks of marine mammals occurring in waters under the jurisdiction of the United States do not experience a level of human-caused mortality and serious injury that is likely to cause the stock to be reduced below its optimum sustainable population level (OSP). OSP is defined as " * * * the number of animals which will result in the maximum productivity of the population or the species, keeping in mind the carrying capacity of the habitat and the health of the ecosystem of which they form a constituent element."

To help accomplish the goal of maintaining marine mammal stocks at their OSPs, section 117 of the MMPA requires the Service and the National Marine Fisheries Service (NMFS) to

prepare stock assessment reports for each marine mammal stock that occurs in waters under the jurisdiction of the United States. These stock assessments are to be based on the best scientific information available and are, therefore, prepared in consultation with established regional scientific review groups. Each stock assessment must include: (1) A description of the stock and its geographic range; (2) minimum population estimate, maximum net productivity rate, and current population trend; (3) estimate of human-caused mortality and serious injury; (4) commercial fishery interactions; (5) status of the stock; and (6) potential biological removal level (PBR). The PBR is defined as “* * * the maximum number of animals, not including natural mortalities, that may be removed from a marine mammal stock while allowing that stock to reach or maintain its OSP.” The PBR is the product of the minimum population estimate of the stock (N_{min}); one-half the maximum theoretical or estimated net productivity rate of the stock at a small population size (R_{max}); and a recovery factor (F_r) of between 0.1 and 1.0, which is intended

to compensate for uncertainty and unknown estimation errors. Section 117 of the MMPA also requires the Service and the NMFS to review and revise the stock assessment reports: (A) At least annually for stocks that are specified as strategic stocks; (B) at least annually for stocks for which significant new information is available; and (C) at least once every 3 years for all other stocks. A strategic stock is defined in the MMPA as a marine mammal stock: (A) For which the level of direct human-caused mortality exceeds the PBR; (B) which, based on the best available scientific information, is declining and is likely to be listed as a threatened species under the Endangered Species Act of 1973 (ESA) within the foreseeable future; or (C) which is listed as a threatened or endangered species under the ESA, or is designated as depleted under the MMPA. A draft revised stock assessment report for the northern sea otter stock in Washington State was made available for a 90-day public review and comment period on April 17, 2008 (73 FR 20931). Prior to releasing it for public review and comment, the Service subjected the

draft report to internal technical review and to scientific review by the Pacific Regional Scientific Review Group established under the MMPA. Following the close of the comment period, the Service revised the stock assessment and prepared the final 2008 stock assessment report. We revised the final stock assessment report based on public comments received (see below). The status of the stock remains unchanged from the draft revised SAR that was provided for public comment; however, the PBR level was amended to reflect the results of the 2007 survey conducted by the Washington Department of Fish and Wildlife. We also provided further clarification in the discussion of fisheries information as it relates to reports of incidental take. Most of the public comments received were addressed by adding new text for clarity. A summary of the final revised stock assessment report is presented in Table 1. The table lists the stock’s N_{min} , R_{max} , F_r , PBR, annual estimated human-caused mortality and serious injury, and status.

TABLE 1—SUMMARY OF FINAL REVISED STOCK ASSESSMENT REPORT FOR THE NORTHERN SEA OTTER STOCK IN WASHINGTON STATE

Stock	N_{min}	R_{max}	F_r	PBR	Annual estimated average human-caused mortality	Stock status
Northern sea otters (Washington State)	1,125	0.20	0.1	11	Unknown	Non-Strategic

Comments and Responses

The Service received comments from 2 entities on the draft stock assessment report. The issues raised in those comments and our responses are provided below.

Comment 1: The Service should clarify that the next revision on this assessment will be prepared within 3 years or sooner, if the Washington stock expands its range into Oregon or British Columbia, or undergoes any significant change in the status of the stock.

Response: The Service will continue to review available information on an annual basis and revise the stock assessment report at least once every 3 years for the northern sea otter in Washington State, as specified under section 117 of the MMPA. Section 117(c) directs the Service to review a stock assessment if significant new information indicates that the status of the stock has changed, which could occur prior to the end of the next 3 years. If the Service obtains new information that indicates this stock has established a range significantly beyond

the current range, or has undergone some other significant change, the Service will review the stock assessment report and revise as appropriate at that time.

Comment 2: The N_{min} , PBR, and Figure 2 should be amended to reflect the results of the 2007 survey conducted by the Washington Department of Fish and Wildlife and appropriate references to the unpublished reports, both 2006 and 2007, should be provided.

Response: The Service agrees with this comment and has updated the stock assessment report to reflect the 2007 survey data. The 2007 survey data identifies an N_{min} of 1,125 and, therefore, the re-calculated PBR is 11 animals. The citations have also been updated to indicate that information on the 2006 and 2007 unpublished survey data may be obtained by contacting the Washington Department of Fish and Wildlife.

Comment 3: In the discussion under Fisheries Information, clarify the location of Fishery Areas 4 and 4A and when this fishery was last active. In

reference to Observer Coverage in these fisheries, listed in Table 1, provide further clarification as to what is meant by “1–11 net days observed.”

Response: The location of Fishery Areas 4 and 4A has been clarified. The information supplied to us by the Makah Tribe and the NMFS regarding the Makah Northern Washington Marine Set-gillnet Fishery was not broken out by Fishery Area; therefore, we can not provide further fishing effort beyond the activity level already included in Table 1 in the stock assessment report. The observer coverage information provided in Table 1 in the stock assessment report is in the format provided by the sources. Further clarification is not available to us for inclusion in the stock assessment report.

Comment 4: Clarify whether the NMFS, who collects data through a self-reporting system on the incidental take of marine mammals in fisheries, has received reports of sea otters taken in treaty and non-treaty fisheries in Washington State or has simply not

provided the reports to the Service. Specify the corresponding time frame.

Response: The Service has updated the stock assessment report to reflect the requested changes. However, the information provided by the NMFS did not include a time frame; therefore, a time frame has not been included in the updated stock assessment report.

Comment 5: Given the apparent lack of voluntary reports of sea otter takes and the unreliability of voluntary reporting schemes in general, remove the word "more" from the sentence on page 5 that states "* * * the information provided by the NMFS is not sufficient to provide a more accurate estimate of annual mortality * * *." Further, a statement should be made that a useful estimate of fishing mortality will require instituting observer coverage to obtain data on fishery efforts.

Response: We have revised the final stock assessment report to reflect this comment. The fishery observer programs are conducted by the NMFS of the Department of Commerce, and, therefore, institution of observer coverage in fisheries must be directed to them. We have forwarded this suggestion to them (see response to comment 6).

Comment 6: The stock assessment report concludes that available information is not adequate to make a reliable assessment of incidental take levels. Therefore, the Service should consult with NMFS, Tribal authorities, and other relevant groups to arrange for the placement of observers aboard trap and gillnet fishing vessels that may incidentally take sea otters.

Response: The fishery observer programs are under the administration of the NMFS in accordance with section 118 of the MMPA. With the exception of the Puget Sound Region salmon drift gillnet, all commercial fisheries in the State of Washington that have the potential to take sea otters are classified as Category III in NMFS' List of Fisheries. Category III fisheries are not required to accommodate observers. Further, under this program, fishery interactions are self-reporting or, in some cases, identified as excluded, e.g., treaty Tribal fishing. It is the position of the Service that the incidental take of sea otters by treaty Tribal fishing activities must be authorized under the MMPA. Nonetheless, obtaining incidental take information is a challenge. However, the Service will continue to work with the NMFS, Tribal authorities, and others to the extent practicable under these conditions to obtain better data.

Comment 7: Illegal taking of sea otters is being perpetrated by "fish profiteers" and the Service is not taking appropriate action.

Response: The stock assessment report presents all of the human-caused mortality of sea otters that has been made known to the Service.

Reference Not Cited in the Notice of Availability of Draft Revised SAR: Jameson, R.J. and S. Jeffries. 2008. Results of the 2007 Survey of the Reintroduced Sea Otter Population in Washington State. Unpublished Report. 7pp. Copies may be obtained from the Washington Department of Fish and Wildlife.

Authority: The authority for this action is the Marine Mammal Protection Act of 1972, as amended (16 U.S.C. 1361-1407).

Dated: October 2, 2008.

Kenneth Stansell,

Acting Director, Fish and Wildlife Service.

Aquatic Nuisance Species Task Force Meeting

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of meeting.

SUMMARY: This notice announces a meeting of the Aquatic Nuisance Species (ANS) Task Force. The meeting is open to the public. The meeting topics are identified in the **SUPPLEMENTARY INFORMATION** section.

DATES: The ANS Task Force will meet from 8 a.m. to 5 p.m. on Tuesday, October 28, and Wednesday, October 29, 2008.

ADDRESSES: The ANS Task Force meeting will take place at the U.S. Fish and Wildlife Service, Room 200, 4401 North Fairfax Drive, Arlington, VA 22203; (703) 358-1843. You may inspect minutes of the meeting at the office of the Chief, Division of Fish and Wildlife Management and Habitat Restoration, U.S. Fish and Wildlife Service, 4401 North Fairfax Drive, Arlington, VA 22203, during regular business hours, Monday through Friday. You may also view the minutes on the ANS Task Force Web site at: <http://anstaskforce.gov/meetings.php>.

FOR FURTHER INFORMATION CONTACT: Joe Starinchak, Branch of Invasive Species,

at (703) 358-2018, or by e-mail at Joe_Starinchak@fws.gov.

SUPPLEMENTARY INFORMATION: Pursuant to section 10(a)(2) of the Federal Advisory Committee Act (5 U.S.C. App.), this notice announces meetings of the ANS Task Force. The ANS Task Force was established by the Nonindigenous Aquatic Nuisance Prevention and Control Act of 1990.

Topics the ANS Task Force plans to cover during the meeting include: Regional Panel issues and recommendations, Committee recommendations, and consideration for approval of state ANS management plans. The agenda and other related meeting information are on the ANS Task Force Web site at: <http://anstaskforce.gov/meetings.php>.

Dated: September 22, 2008.

Gary Frazer,

Co-Chair, Aquatic Nuisance Species Task Force, Assistant Director—Fisheries & Habitat Conservation.

Bureau of Land Management

[F-14876-M, F-14876-N; AK-964-1410-KC-P]

Alaska Native Claims Selection

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of decision approving lands for conveyance.

SUMMARY: As required by 43 CFR 2650.7(d), notice is hereby given that an appealable decision approving lands for conveyance pursuant to the Alaska Native Claims Settlement Act will be issued to NANA Regional Corporation, Inc., Successor in Interest to Kivalina Sinuakmeut Corporation. The lands are in the vicinity of Kivalina, Alaska, and are located in:

Kateel River Meridian, Alaska

T. 29 N., R. 24 W.,

Secs. 3 to 10, inclusive;

Secs. 13 to 23, inclusive;

Secs. 28 to 33, inclusive.

Containing approximately 14,663 acres.

The subsurface estate in these lands will be conveyed to NANA Regional Corporation, Inc. when the surface estate is conveyed to NANA Regional Corporation, Inc., Successor in Interest to Kivalina Sinuakmeut Corporation. Notice of the decision will also be published four times in the Arctic Sounder.
