

snags in combination with the extended rotation age of 60 years, will improve spotted owl dispersal habitat in this CSA and outside of the CSA. Marbled murrelets are expected to receive benefits through the identification of Special Management Areas and Special Set Asides as these areas will be allowed to develop into more structurally diverse forest with an increased chance of containing suitable nesting platforms over the life of the Permit. Spotted owls will also benefit from improved habitat conditions in these areas.

While SHAs are often categorically excluded under NEPA, for this situation an EA was determined to best integrate Federal and State public review processes. As described above, PBTF is applying to the Washington Department of Natural Resources for a Landowner Option Plan and a Cooperative Habitat Enhancement Agreement for both the spotted owl and the marbled murrelet. The draft EA evaluates the potential impacts to the environment from the no-action alternative and the proposed SHA.

This notice is provided pursuant to section 10(c) of the Act and NEPA regulations (40 CFR 1506.6). The Service will evaluate the Permit application, associated documents, and comments submitted thereon to determine whether the draft EA, and the proposed SHA and Permit application meet the requirements of NEPA regulations and section 10(a) of the Act, respectively. If it is determined that the requirements are met, the SHA will be finalized and signed, and the Permit will be issued to the Applicant for incidental take of the covered species. The final NEPA and permit determinations will not be completed until after the end of the 30-day comment period, and will fully consider all public comments received during the comment period.
