**SUPPLEMENTARY INFORMATION:**

##### I. Introduction

The U.S. Nuclear Regulatory Commission (NRC) is issuing a revision to an existing guide in the agency's "Regulatory Guide" series. This series was developed to describe and make available to the public information such as methods that are acceptable to the NRC staff for implementing specific parts of the agency's regulations, techniques that the staff uses in evaluating specific problems or postulated accidents, and data that the staff needs in its review of applications for permits and licenses.

Regulatory Guide 3.25, "Standard Format and Content of Safety Analysis Reports for Uranium Enrichment Facilities," was issued with a temporary identification as Draft Regulatory Guide, DG-3033. This regulatory guide directs the reader to the type of information acceptable to the NRC staff for review of a safety analysis report (SAR) for uranium enrichment facilities. The SAR may be a separate report submitted as part of the application or may be integrated into the license application. This guide also refers the reader to documentation on the standard format and content of SARs and related documents submitted as part of an application to construct or modify and operate a nuclear fuel cycle facility.
