

American MSM. The study entails conducting interviews with a sample of African American MSM, ages 18 to 44 to: (1) Explore participants' knowledge, attitudes and beliefs about HIV and HIV testing to inform the development of campaign messages; (2) identify the most motivating approach, supporting data, and key messages for materials

development; (3) test creative concepts, potential campaign themes, logos and names; and (4) test creative materials developed based on the findings from the previous phases of the research. Findings from this study will be used by CDC and its partners to inform current and future program activities.

A total of 288 participants will be screened for eligibility in order to find 144 people who will participate in an interview. All interview participants (n=144) will complete a short "Paper and Pencil" questionnaire. There are no costs to the respondents other than their time.

ESTIMATED ANNUALIZED BURDEN TABLE

Types of data collection	No. of respondents	No. of responses per respondent	Average burden per response (in hours)	Total burden (in hours)
Screener	288	1	10/60	48
Consent Form	144	1	5/60	12
Interview	144	1	1	144
Paper and Pencil Survey	144	1	10/60	24
Total				228

Dated: February 13, 2009.

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Written comments should be received within 60 days of this notice.

Background and Brief Description

The purpose of the proposed study is to conduct formative research to inform the development of the HIV Testing Social Marketing Campaign for African American MSM, a CDC-sponsored social marketing campaign aimed at increasing HIV testing rates among young, African American MSM. The study entails conducting interviews with a sample of African American MSM, ages 18 to 44 to: (1) Explore participants' knowledge, attitudes and beliefs about HIV and HIV testing to inform the development of campaign messages; (2) identify the most motivating approach, supporting data, and key messages for materials development; (3) test creative concepts, potential campaign themes, logos and names; and (4) test creative materials developed based on the findings from the previous phases of the research. Findings from this study will be used by CDC and its partners to inform current and future program activities.

A total of 288 participants will be screened for eligibility in order to find 144 people who will participate in an interview. All interview participants (n=144) will complete a short "Paper and Pencil" questionnaire. There are no costs to the respondents other than their time.

Proposed Project

STD Surveillance Network (SSuN)—New—Division of STD Prevention (DSTDP); National Center for HIV/AIDS, Viral Hepatitis, STD, and TB Prevention (NCHHSTP); Centers for Disease Control and Prevention (CDC).

Background and Brief Description

The STD Surveillance Network (SSuN) is a group of STD clinics and health departments designed to perform active surveillance for STDs, such as, chancroid, chlamydia, gonorrhea, syphilis, hepatitis B, HIV, trichomoniasis, genital warts, human Papillomavirus, and *Mycoplasma genitalium* at twelve health departments and STD clinics at: Alabama State Health Department, Baltimore City Health Department, Chicago City Health Department, Colorado State Health Department, Connecticut State Health Department, Los Angeles City Health Department, Louisiana State Health Department, New York City Health Department, Philadelphia City Health Department, San Francisco City Health Department, Virginia State Health Department, and Washington State Health Department.

These twelve active sentinel surveillance sites will provide detailed information on demographic characteristics, behavioral risk factors, and clinical history of ill persons in order to identify factors that sustain the epidemic. For example, history of previous STD, number and sex of sex partners, and participation in anonymous or commercial sex alter a person's risk for acquiring disease.

The objectives of the SSuN project are: (1) To establish an integrated network of sentinel STD clinics and health departments to inform and guide national programs and policies for STD control in the U.S.; (2) to improve the

capacity of national, state, and local STD programs to detect, monitor, and respond to established and emerging trends in STDs, HIV, and viral hepatitis; and (3) to identify and evaluate the effectiveness of public health interventions to reduce STD morbidity.

Information for the SSuN will be obtained from two different areas; twelve sentinel STD clinics and twelve health departments who will conduct sentinel surveillance among individuals who are diagnosed with STDs in the general population.

Health Departments and the sentinel STD clinics are funded by CDC through a cooperative agreement for participation in the SSuN active surveillance. Clinical information of the patients with a STD is routinely entered into the STD clinic databases in an electronic form. In addition to the clinical data, STD clinic counselors will include a patient interview on sexual behaviors and practices, and clinical history which will also reside in the clinic databases. Data elements of interest to the SSuN will be extracted from the clinic databases on a quarterly basis and transmitted to CDC through a secured channel. Each STD clinic will spend 2 hours to transmit the data to CDC each quarter. At CDC, data will be aggregated with data from all participating sites in a common language and formatted for analysis.

The twelve Health departments serving as the SSuN sentinel surveillance sites will interview 67 persons from the community at large each quarter. Each interview is expected to take 7 minutes per person. The survey results will also be entered into the existing information systems at each health department and sent to CDC through a secure data network on a quarterly basis.

There is no cost to the respondents other than their time.

ESTIMATE OF ANNUALIZED BURDEN TABLE

Respondent	No. of respondents	No. of responses per respondent	Average burden per response (in hours)	Total burden (in hours)
STD Surveillance Clinics	12	4	2	96
STD Patients	3216	1	7/60	375
Total				471
