

protect the health of the public under the authority of section 301 of the Public Health Service Act (42 U.S.C.).

This information collection request also includes the Passenger Locator Information Form. The Passenger Locator Information Form is used to collect reliable information that assists quarantine officers in locating, in a timely manner, those passengers and crew who are exposed to communicable diseases of public health significance while traveling on a conveyance. HHS delegates authority to CDC to conduct

quarantine control measures. Currently, with the exception of rodent inspections and the cruise ship sanitation program, inspections are performed only on those vessels and aircraft which report illness prior to arrival or when illness is discovered upon arrival. Other inspection agencies assist quarantine officers in public health screening of persons, pets, and other importations of public health significance and make referrals to the Public Health Service when indicated. These practices and procedures assure protection against the

introduction and spread of communicable diseases into the United States with a minimum of recordkeeping and reporting as well as a minimum of interference with trade and travel.

Respondents include airline pilots, ships' captains, importers, and travelers. The nature of the quarantine response dictates which forms are completed by whom.

There are no costs to respondents except for their time to complete the forms.
