

restore tidal influence to the site; however, continued maintenance of the Dutchman and South Slough levees would occur. Under this alternative, because the lead agencies would be required to maintain the northern levee along Dutchman Slough in perpetuity, maintenance activities would likely increase as the levees age and as scour increases in response to activities undertaken by the Napa Sonoma Restoration Project. Under the No-Action Alternative, the components of the Proposed Action would not be implemented.

#### *Preferred Restoration Alternative*

The Preferred Restoration Alternative would restore the entire 1,500-ac Cullinan Ranch Site with implementation of the following project components:

- *Component 1:* Construct boardwalk to provide access to existing electrical towers.
- *Component 2:* If needed, drainage ditches would be blocked to promote redevelopment of natural sloughs.
- *Component 3:* Improve the DFG Pond 1 levee and install water control structures.
- *Component 4:* Protect Highway 37 from project-induced flooding and erosion, through levee construction.
- *Component 5:* Construct public access areas.
- *Component 6:* Breach the levees along Dutchman and South Sloughs and Guadalcanal Village.
- *Component 7:* Implement long-term monitoring.

#### *Partial Restoration Alternative*

The Partial Restoration Alternative would restore 300 ac of the Cullinan Ranch Site. The Partial Restoration Alternative was developed in order to limit potential impacts to the hydrology of Dutchman Slough. While it would meet the purpose and need of the project, a smaller overall area within Cullinan Ranch would be restored, and connectivity with other adjacent restoration projects would be limited.

The Partial Restoration Alternative would include implementation of the following project components:

- *Component 1:* If needed, drainage ditches would be blocked to promote redevelopment of natural Sloughs.
- *Component 2:* Construct internal levee.
- *Component 3:* Protect Highway 37 from project-induced flooding and erosion, through levee construction.
- *Component 4:* Breach the levee along Dutchman Slough.
- *Component 5:* Long-term monitoring.
