Notice of Intent To Prepare an Environmental Impact Statement for the Proposed Sonoran Solar Energy Project, Maricopa County, AZ

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of Intent.

SUMMARY: The Bureau of Land Management (BLM), Phoenix District Office, Lower Sonoran Field Office intends to prepare an Environmental Impact Statement (EIS) to address potential effects of a proposed solar energy project by Boulevard Associates, LLC and by this notice is announcing the beginning of the scoping process and soliciting input on the identification of issues.

DATES: The BLM will announce public scoping meetings to identify relevant issues through news media, newspapers, and BLM's Web site (<http://www.blm.gov/az/st/en.html>) at least 15 days prior to each meeting. We will provide additional opportunities for public participation upon publication of the Draft EIS, including a 45-day public comment period.

ADDRESSES: Comments may be submitted by either of the following methods:

- Mail: Sonoran Solar Energy Project,
- ATTN: Joe Incardine, National Project Manager, BLM Phoenix District Office, Lower Sonoran Field Office, 21605 North 7th Avenue, Phoenix, Arizona 85027-2929.
- Electronic Mail: sonoransolar@blm.gov.

FOR FURTHER INFORMATION CONTACT: For information regarding the BLM process or to have your name added to the mailing list, send requests to: ATTN: Sonoran Solar Energy Project, BLM Phoenix District Office, Lower Sonoran Field Office, 21605 North 7th Avenue, Phoenix, Arizona 85027-2929, or call Joe Incardine, 801-524-3833, or e-mail: Joe_Incardine@blm.gov.

SUPPLEMENTARY INFORMATION: The purpose of the public scoping process is to determine relevant issues that will

influence the scope of the environmental analysis, including alternatives, and guide the planning process. Boulevard Associates, LLC has applied to BLM for a right of way (ROW) on public lands to construct a concentrated solar thermal (CST) power plant, a 500 kilovolt (kV) transmission line, water supply facilities, a natural gas pipeline, an access road, and other related facilities in the Little Rainbow Valley, east of State Route 85, and south of the Buckeye Hills and the town of Buckeye in Maricopa County, Arizona. The facility would be expected to operate for approximately 30 years. A ROW grant for the construction, operation, and maintenance of this Project would be required from BLM. Additional applicable permits from Federal, State and local agencies may also be required.

Boulevard Associates, LLC would construct up to 375 megawatts (MW) of solar thermal electrical generation with options for natural gas backup and/or thermal storage capabilities. The solar facility would consist of solar fields made up of single-axis-tracking parabolic trough solar collectors. Each collector contains a linear parabolic-shaped reflector (glass mirrors) that focuses the sun's direct radiation on a heat collection element located at the focal point of the parabola. The collectors would track the sun from east to west during the day to ensure the sun is continuously focused on the linear receiver. A heat transfer fluid would be heated as it passes through the receivers and then circulated through a series of heat exchangers to generate high-pressure superheated steam. The steam would power a conventional steam turbine generator which produces electricity. The plant would be made up of one or more power blocks. Each power block would be located near the center of its respective solar field and would contain multiple feedwater heaters, steam generators, steam superheaters, and feedwater pumps.

To optimize the output capacity of the project, both natural gas backup and/or thermal energy storage would be used as needed. Natural gas backup would include the addition of a partial or full load burner arrangement that would generate additional steam when solar energy is absent or insufficient by itself. Annual output from natural gas would be limited to 25 percent of annual capacity to ensure that the plant remains predominantly a solar powered facility. Thermal energy storage would provide the option of transferring some or all of the solar energy into molten salt contained in insulated tanks. Using heat exchangers and pumps designed for
