

Upon receipt of the reports, the data is entered into the ODS Tracking System. The ODS Tracking System is a secure database that maintains the data submitted to EPA and helps the Agency: (1) Maintain oversight over total production and consumption of controlled substances; (2) monitor compliance with limits and restrictions on production, imports, and trades and specific exemptions from the phaseout for individual U.S. companies; (3) enforce against illegal imports; and (4) assess, and report on, compliance with the U.S. phasedown caps established under the Montreal Protocol.

EPA has implemented an electronic reporting system through the Agency's Central Data Exchange (CDX) that allows regulated entities to prepare and submit data electronically. Coupled with the widespread use of the standardized forms, electronic reporting has improved data quality and made the reporting process efficient for both reporting companies and EPA. Most reports that are submitted to the Agency with the largest amount of data are submitted electronically.

Burden Statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to average 5 hours per response. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements which have subsequently changed; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

Respondents/Affected Entities: Companies that produce, import, and export class II controlled ozone depleting substances

Estimated Number of Respondents: 53
Frequency of Response: Occasionally
Estimated Total Annual Hour Burden: 1,860 hours

Estimated Total Annual Cost: \$181,532, which includes \$1,140 annualized capital or O&M costs.

Changes in the Estimates: There is an increase of 228 hours in the total estimated burden currently identified in the OMB Inventory of Approved ICR

Burdens. This change can be attributed to two major changes: (1) An increase in the number of responses for the Request for Additional Allowance Report and Domestic Transfer of Allowances/Inter-pollutant Transfer Report and (2) an increase in the number of activities per year for the Petition to Import Used Substances.

1,2-Ethylene Dichloride; Completion of EPA Program Review

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: EPA issued a testing consent order that incorporated an enforceable consent agreement (ECA) for 1,2-Ethylene Dichloride (EDC) in June 2003, using authorities under section 4 of the Toxic Substances Control Act (TSCA). The companies subject to the ECA agreed to conduct toxicity testing in a tiered testing program that included development of pharmacokinetics and mechanistic data and a computational dosimetry model for route-to-route extrapolations. The testing program was designed to satisfy the toxicological data needs for EDC identified in a TSCA section 4 proposed test rule for a number of hazardous air pollutant chemicals. The modeling is intended to allow toxicological studies conducted using oral exposures to be interpreted so that they could also be used to predict the effects of inhalation exposures. This notice announces the completion of the program review component of the ECA for EDC. This notice also states EPA's findings and conclusion regarding the adequacy of the derived models to perform satisfactory route-to-route extrapolations, responds to comments on the Tier I Program Review Testing, and establishes revised deadlines for completion of Tier II testing and computational route-to-route dosimetry modeling for extrapolations listed under Tier II of the ECA for EDC.
