

periodically review and, if appropriate, revise the NAAQS based on the revised criteria.

Air quality criteria have been established for sulfur oxides (SO_x) and NAAQS have been established for sulfur dioxide (SO₂), an indicator for gaseous SO_x. Presently, EPA is in the process of reviewing the NAAQS for SO₂. As part of its review of the NAAQS, EPA prepared an assessment of exposures and health risks associated with ambient SO₂. A plan describing the proposed approaches to assessing exposures and risks was described in *Sulfur Dioxide Health Assessment Plan: Scope and Methods for Exposure and Risk Assessment*. This document was released for public review and comment in November 2007 and was the subject of a consultation with the Clean Air Scientific Advisory Committee (CASAC) on December 5–6, 2007. Comments received from that consultation were considered in developing a draft document, *Risk and Exposure Assessment to Support the Review of the SO₂ Primary National Ambient Air Quality Standard: First Draft*, which was released for public review and comment in July 2008 and was the subject of a CASAC review on July 30–31, 2008. Comments received from that review were considered in developing a second draft document, *Risk and Exposure Assessment to Support the Review of the SO₂ Primary National Ambient Air Quality Standard: Second Draft*, which was released for public review and comment in March 2009 and was the subject of a CASAC review on April 16–17, 2009. In preparing the final risk and exposure assessment report, EPA considered comments received from CASAC and the public at and subsequent to that meeting.

The *Risk and Exposure Assessment to Support the Review of the SO₂ Primary National Ambient Air Quality Standard: Final Report* being released at this time conveys the approaches taken to assess exposures to ambient SO₂ and to characterize associated health risks, and presents the results of those assessments. This document also contains a staff policy assessment that considers the health evidence presented in an EPA document, *Integrated Science Assessment for Oxides of Sulfur* (available at: http://www.epa.gov/ttn/naaqs/standards/so2/s_so2_cr_ia.html), and the exposure and risk characterization results, as they relate to the adequacy of the current SO₂ NAAQS and consideration of potential alternative primary SO₂ standards. The *Risk and Exposure Assessment to Support the Review of the SO₂ Primary National Ambient Air Quality Standard:*

Final Report will be available online at: http://www.epa.gov/ttn/naaqs/standards/so2/s_so2_cr_rea.html.

Dated: July 22, 2009.
