staff needs in its review of applications for permits and licenses.

The draft regulatory guide (DG), entitled, "Initial Startup Test Program to Demonstrate Remote Shutdown Capability for Water-Cooled Nuclear Power Plants," is temporarily identified by its task number, DG—1236, which should be mentioned in all related correspondence. DG—1236 is proposed Revision 2 of Regulatory Guide 1.68.2, dated July 1978.

This guide describes an initial startup test program acceptable to the NRC staff for demonstrating hot shutdown capability and the potential for cold shutdown from outside the control room. This guide is applicable to water-cooled nuclear power plants.

Title 10, Part 50, of the *Code of* Federal Regulations (10 CFR Part 50), "Domestic Licensing of Production and Utilization Facilities," and 10 CFR Part 52, "Licenses, Certifications, and Approvals for Nuclear Power Plants," 10 CFR 50.34, "Contents of Applications; Technical Information," and 10 CFR 52.79, "Contents of Application, Technical Information in FSAR," require, in part, that an applicant for a license to operate a production or utilization facility provide a safety analysis report (SAR) that includes the principal design criteria for the proposed facility. The introduction to Appendix A, "General Design Criteria for Nuclear Power Plants," to 10 CFR Part 50 states that these principal design criteria are to establish the necessary design, fabrication, construction, testing, and performance requirements for structures, systems, and components (SSCs) important to safety (i.e., SSCs that provide reasonable assurance that the facility can be operated without undue risk to the health and safety of the public).
