

dust as defined in the Coal Mine Health and Safety Act of 1969.

Given the results of the recent coal dust particle size survey and large-scale explosion tests, NIOSH recommends a new standard of 80% TIC be required in the intake airways of bituminous coal mines. The survey results indicate that the current requirement of 80% TIC in return airways is still sufficient and appropriate. In addition, NIOSH agrees with and endorses an earlier recommendation that new rock dusting standards should be based on a worst-case scenario (using high volatile coals) with no relaxation for lower volatile coals.
