

Research Lab for a 2-month holding period to quantify delayed mortality. Fish surviving the 2-month holding period would be returned to Rhode Island coastal waters. The applicants have also requested temporary exemptions from scup size restrictions at § 648.124; scup possession limits at § 648.125; and possession restrictions for squid and butterfish at § 648.25. These exemptions would allow incidental catch species to be temporarily retained for data collection purposes. Incidental catch below the minimum size, and above the possession limit, would be discarded immediately following data collection.

The applicants anticipate that for each control net tow, the legal-sized summer flounder catch would be 75 lb (34 kg), and the sub-legal sized summer flounder catch would be 12 lb (5.4 kg). Target catch, including squid, butterfish, and scup, would total 150 lb (68 kg). For each experimental net tow, both the legal-sized and sub-legal sized summer flounder catch would be less than 10 lb (4.5 kg). Target catch would remain 150 lb (68 kg). Each day of fishing would consist of four to six side-by-side tows, with a total of 12 fishing days for the project.

The applicants may request minor modifications and extensions to the EFP throughout the course of research. EFP modifications and extensions may be granted without further public notice if they are deemed essential to facilitate completion of the proposed research and result in only a minimal change in the scope or impacts of the initially approved EFP request.
