Take. The applicant plans collect primarily the skulls and humerus or femur, with soft tissue, from seal mummies of all species on an opportunistic basis. The specimens collected would be radiocarbon dated and sampled for organochlorines in residual lipids in the long bones. The remainder of the samples will be housed in the Southern Methodist University's Shuler Museum of Paleontology. The samples will provide time context for ecological interpretation of stable isotopes and the history of pollution in this portion of Antarctica.
