

Estimated Total Annual Cost Burden (does not include hourly wage costs): \$1,200.

Affected Public: Business or other for profits (mines).

Description: Main fans for all underground metal and nonmetal gassy mines must have pressure-recording systems. The fans are required to be examined daily while operating if persons are underground. The pressure-recording systems indicate whether the fans are in good operating condition. 30 CFR 57.22204 requires the pressure recordings to be kept one year. Information collected through the pressure recordings has been and is used by mine operators and MSHA for maintaining a constant vigilance on mine ventilation and for ensuring that unsafe conditions are identified early and corrected. Technical consultants may occasionally review such information in addressing main fan or ventilation problems. For additional information, see related notice published at Vol. 74 FR 40610 on August 12, 2009.

Description: The Department's regulations at 30 CFR 77.1101 require operators of surface coal mines, including surface facilities, and surface work areas of underground coal mines to establish and keep current a specific escape and evacuation plan to be followed in the event of a fire. The plan is used to instruct employees in the proper method of exiting work areas in the event of a fire. The escape and evacuation plan is prepared by the mine operator and is used by mines, MSHA, and persons involved in rescue and recovery. The plan is used to instruct employees in the proper methods of exiting structures in the event of a fire. MSHA inspection personnel use the plan to determine compliance with the standard requiring a means of escape and evacuation be established and the requirement that employees be instructed in the procedures to follow

should a fire occur. For additional information, see related notice published at Vol. 74 FR 40611 on August 12, 2009.

Description: The Department's regulations at 30 CFR 77.1901 require coal mine operators to conduct inspections of slope and shaft areas of hazardous conditions, including tests for methane and oxygen deficiency, before and during each shift and before and after blasting. Records of the results of the inspections are required to be kept. The records are used by slope and shaft supervisors and employees, State mine inspectors, and Federal mine inspectors. The records show that the examinations and tests were conducted and give insight into the hazardous conditions that have been encountered and those that may be encountered. The records of inspections greatly assist those who use them in making decisions that will ultimately affect the safety and health of slope and shaft sinking employees. For additional information, see related notice published at Vol. 74 FR 40612 on August 12, 2009.
