

part of the selection process for future competitions.

This current call for comments on white papers pertains to the four areas of critical national need shown below. However, TIP intends to post additional white papers for comments over the coming months.

Civil Infrastructure: Civil infrastructure constitutes the basic fabric of the world in which we live and work. It is the combination of fundamental systems that support a community, region, or country. The civil infrastructure includes systems for transportation (airport facilities, roads, bridges, rail, waterway locks) and systems for water distribution and flood control (water distribution systems, storm and waste water collection, dams, and levees). New construction approaches and materials to improve the infrastructure and for mitigating the expense of repairing or replacing existing infrastructure appear to be areas with the potential for specific societal challenges within this area of critical national need.

The 2009 *Civil Infrastructure* competition, based on the white paper *Advanced Sensing Technologies and Advanced Repair Materials for Infrastructure: Water Systems, Dams, Levees, Bridges, Roads, and Highways*, dated March 2009, emphasizes technologies to detect corrosion, cracking, delamination and other structural damage in water resources systems such as water and wastewater pipelines, dams, levees and waterway locks, as well as bridges and roadways. The white paper for the 2009 *Civil Infrastructure* competition can be found at http://www.nist.gov/tip/wp_cmts/index.html.

Manufacturing: R&D projects in manufacturing could enable better, more cost-effective use of advanced materials in innovative products. New and improved materials underlie many new product innovations. High-strength alloys, aluminum and magnesium are used to build stronger, lighter and safer vehicles; superalloys are used to make higher efficiency gas turbines; composites make larger, more efficient wind turbine blades and higher performance aircraft; and nanomaterials are finding their way into better performing batteries, energy storage devices, high voltage transmission lines and healthcare applications.

The 2009 *Manufacturing* competition, based on the white paper *Accelerating the Incorporation of Materials Advances into Manufacturing Processes*, dated March 2009, addresses improved technologies to produce these new materials and to rapidly integrate them

into products while maintaining the material's unique properties. The white paper for the 2009 *Manufacturing* competition can be found at http://www.nist.gov/tip/wp_cmts/index.html.

Energy (proposed topic area): The proposed topic area within the critical national need area of energy is based on the draft white paper *Technologies to Enable a Smart Grid*, which outlines the technologies that will be required to enable a reliable smart grid approach to electric power distribution, demand, and response control, grid connectivity, and the integration of renewable energy sources into the grid. The proposed topic aims to address research in energy storage systems and the integration of stored energy into the grid system, advanced sensors and their energy sources to be deployed along the grid, and communication and control technologies (high voltage power electronics). The draft white paper for the proposed topic of Energy can be found at http://www.nist.gov/tip/wp_cmts/index.html.

Healthcare (proposed topic area): The proposed topic area with the critical national need of Healthcare is based on the draft white paper *Advanced Technologies for Proteomics, Data Integration and Analysis and Biomanufacturing for Personalized Medicine*, which outlines the platform technologies that will be needed to enable a personalized approach to safer and more cost-effective healthcare. The proposed topic specifically aims to address research needs for: Non-invasively analyzing proteins in real time in live tissues, animal models and humans; linking genomic, proteomic and other disparate datasets with patient-specific data to understand disease susceptibility and response to treatment; and cost-effective high-throughput biopharmaceutical manufacturing. The draft white paper for the proposed topic of *Healthcare* can be found at http://www.nist.gov/tip/wp_cmts/index.html.
