SUPPLEMENTARY INFORMATION:

Background and Purpose

The offshore supply vessel INGRID will be used for offshore supply operations. The horizontal distance between the forward and aft masthead lights may be 21'-10". Placing the aft masthead light at the horizontal distance from the forward masthead light as required by Annex I, paragraph 3(a) of the 72 COLREGS and Annex I, Section 84.05(a) of the Inland Rules Act would result in an aft masthead light location directly over the cargo deck, where it would interfere with loading and unloading operations.

The Certificate of Alternative Compliance allows for the horizontal separation of the forward and aft masthead lights to deviate from the requirements of Annex I, paragraph 3(a) of 72 COLREGS and Annex I, Section 84.05(a) of the Inland Rules Act.

This notice is issued under authority of 33 U.S.C. 1605(c), and 33 CFR 81.18.

Dated: January 4, 2010.

Commander, U.S. Coast Guard, Chief, Inspections and Investigations Branch, By Direction of the Commander, Eighth Coast Guard District.

Background

The Florida scrub-jay (scrub-jay) is found exclusively in peninsular Florida and is restricted to xeric upland communities (predominately in oak-dominated scrub with open canopies) of the interior and Atlantic coast sand ridges. Increasing urban and agricultural development has resulted in habitat loss and fragmentation, which have adversely affected the distribution and numbers of scrub-jays. Remaining habitat is largely degraded due to the exclusion of fire, which is needed to maintain xeric uplands in conditions suitable for scrub-jays. The total estimated population is between 7,000 and 11,000 individuals.

Applicant's Proposal

The applicant is requesting take of approximately 100 ac of occupied Florida scrub-jay habitat incidental to the project. The 4,345-ac project is located on the Texaco Tract in Sections 22-27, 34, and portions of Section 13, Township 34 South, Range 22 East, in Manatee County, Florida. The proposed project includes land clearing activities associated with phosphate mining which will result in the take of 100 ac of occupied scrub-jay habitat, including four scrub-jay families. The applicant proposes to mitigate for the take of the sand skink at a ratio of 2:1 based on Service Mitigation Guidelines. The applicant proposes to mitigate for 100 ac of impacts by establishing a conservation easement capturing 200 ac of scrub-jay within the Mosaic Wellfield.

We have determined that the applicant's proposal, including the proposed mitigation and minimization measures, would have minor or
