SUPPLEMENTARY INFORMATION:

Background: The NSA is a tenant DOD agency on Fort Meade. NSA is a high-technology organization that is on the frontier of communications and data processing. In order to meet evolving mission requirements, the development of a modern operational complex is needed at the NSA campus on Fort Meade.

Proposed Action and Alternatives: The Campus Development Project was initiated to provide a modern operational complex to meet the evolving mission requirements of NSA and the Intelligence Community. Development is proposed for a portion of Fort Meade (referred to as "Site M") adjacent to the NSA campus. Site M is divided into northern (Site M-1, 137 acres) and southern (Site M-2, 90 acres) portions. DOD proposes that development of Site M occur in three option phases over a horizon of approximately 20 years.

- *Proposed Action (Phase I).* Development would occur in the near term (approximately 2012 to 2014) on the eastern half of Site M-1, supporting 1.8 million square feet (ft²) of facilities for NSA to consolidate mission elements, enabling services, and support services across the campus based on function; servicing the need for more collaborative environment and optimal adjacencies, including associated infrastructure (e.g., electrical substation and generator plants providing 50

megawatts of electricity) and administrative functions for up to 6,500 personnel. This phase would also include a steam and chilled water plant, water storage tower, and electrical substations and generator facilities capable of supporting the entire operational complex on Site M.

- *Alternative 1 (Phases I and II).* Alternative 1 would include the implementation of the Proposed Action (Phase I) along with Phase II. Phase II would occur in the mid-term (approximately 2020) on the western half of Site M-1, supporting 1.2 million ft² of administrative facilities.

- *Alternative 2 (Phases I, II, and III).* Alternative 2 would include the implementation of the Proposed Action (Phase I) along with Phases II and III. Development would occur on Site M-2 in the long term (approximately 2029), supporting an additional 2.8 million ft² of administrative facilities, bringing built space to 5.8 million ft² for up to 11,000 personnel.

Alternatives identified include each of the development phases identified above, as well as three options for redundant emergency backup power generation and various pollution control systems. The No Action Alternative (not undertaking the Campus Development Project) will also be analyzed in detail.

Summary of Environmental Impacts: The level of potential environmental impacts resulting from the Proposed Action and alternatives would primarily be dependent on the alternative ultimately selected. Environmental impacts would generally be more adverse for Alternatives 1 and 2 than for the Proposed Action due to the increase in building footprint and the number of additional personnel associated with the alternatives.

Generally, construction and demolition activities would be expected to result in some amount of ground disturbance. Short-term adverse on-site impacts on soil and water resources as a result of sedimentation, erosion, and storm water runoff are unavoidable. Construction and demolition activities also generate solid waste. These kinds of impacts would be expected regardless of the alternative chosen. Long-term operation of the complex would be expected to result in negligible to moderate impacts on land use, transportation, noise, air quality, biological resources, infrastructure, hazardous materials and waste, and socioeconomic resources. Potential significant impacts on cultural resources could occur under Alternative 2 if potentially historic properties are not treated as a design constraint and avoided.

Best Management Practices and Mitigation Measures. The Proposed Action has the potential to result in adverse environmental impacts. The Proposed Action includes best management practices, mitigation measures, and design concepts to avoid adverse impacts to the extent practicable. Unavoidable impacts would be minimized or compensated for, to the extent practicable. In accordance with Council on Environmental Quality regulations, mitigation measures must be considered for adverse environmental impacts. Once a particular impact associated with a proposed action is considered significant, then mitigation measures must be developed where it is feasible to do so.

Copies of the Draft EIS are available for public review at local repositories and by request (*see ADDRESSES*). The DOD invites public and agency input on the Draft EIS. Please submit comments and materials during the 45-day public review period to allow sufficient time for consideration in development of the Final EIS (*see DATES*).
