#### **SUPPLEMENTARY INFORMATION:**

*Title:* Experiments on Driving under Uncertain Congestion Conditions and the Effects on Traffic Networks from Congestion Pricing Initiatives.

*Background:* The traditional way of financing the transportation system in the U.S. is currently being challenged and new revenue schemes are being evaluated for possible implementation. In addition, the growth in traffic volumes overwhelms the ability to finance additional road capacity.

Congestion pricing is gaining support across the world as a way to solve the congestion problem and thereby ease the congestion cost to the public and at the same time generate revenues that can be used to fund additional transportation capacity. While congestion pricing strategies have been implemented in several parts of the world, the implementation is still relatively limited in this country.

This study will assess the responses to several congestion pricing schemes by asking volunteer participants to make driving choices under these schemes in an experiment. The study will present participants with a number of choice situations involving routes that vary in road pricing and travel time. Three basic types of experiments will be conducted: A field experiment using Global Positioning System (GPS) trackers; a multi-driver traffic simulation experiment; and a single driver simulator experiment. In addition to these experiments participants will answer short demographic questionnaires and short surveys of their driving habits.

The initial phase will consist of recruiting participants by sending out invitation letters to potential participants who are drivers on select routes in the Miami, Florida, Orlando, Florida and Atlanta, Georgia metropolitan areas. Local toll road agencies have agreed to collaborate with the researchers in this phase. The invitation will ask those who are interested to complete a survey online. This survey is used to filter respondents based on how frequently they drive on the selected routes. A typical respondent will complete this survey in 30 minutes. Respondents who express interest in being part of the experiments will be asked to attend four face-to-face sessions. There will be a choice of times and locations for these sessions so as to make it convenient for the participant.
