

parts of the NRC's regulations, techniques that the staff uses in evaluating specific problems or evaluating accidents, and data that the staff needs in its review of applications for permits and licenses.

The draft regulatory guide (DG), entitled, "Qualification for Cement Grouting for Prestressing Tendons in Containment Structures," is temporarily identified by its task number, DG-1196, which should be mentioned in all related correspondence. DG-1196 is proposed Revision 2 of Regulatory Guide 1.107, dated February 1977.

This guide describes a method that the staff of the U.S. Nuclear Regulatory Commission (NRC) considers acceptable for the use of Portland cement grout as the corrosion inhibitor for prestressing tendons in prestressed concrete containment structures. This guide also provides quality standards for using portland cement grout to protect prestressing steel from corrosion.

The prestressing tendon system of a prestressed concrete containment structure is a principal strength element of the structure. The ability of the containment structure to withstand the events postulated to occur during the life of the structure depends on the functional reliability of the structure's principal strength elements. Thus, any significant deterioration of the prestressing elements caused by corrosion may present a potential risk to public safety. It is important that any system for inhibiting the corrosion of prestressing elements must possess a high degree of reliability in performing its intended function.

**AGENCY:** Nuclear Regulatory Commission.

**ACTION:** Notice of availability of safety evaluation report.

**FOR FURTHER INFORMATION CONTACT:**

**SUPPLEMENTARY INFORMATION:**

**I. Introduction**

The Nuclear Regulatory Commission (NRC) is considering the issuance of a license to AREVA Enrichment Services (AES) LLC (the applicant) to authorize construction of a gas centrifuge enrichment facility and possession and use of byproduct material, source material, and special nuclear material. This proposed facility is known as the Eagle Rock Enrichment Facility (EREF)

and will be located in Bonneville County, Idaho. The NRC has prepared a Safety Evaluation Report (SER) in support of this license application.

**II. Summary**

By letter dated December 30, 2008, the applicant submitted to the NRC, an application requesting a license, under Title 10 of the *Code of Federal Regulations* Parts 30, 40, and 70, to possess and use byproduct material, source material, and special nuclear material in a gas centrifuge uranium enrichment facility. The applicant proposes that the facility, known as the EREF, be located in Bonneville County, Idaho, about 32 kilometers (20 miles) west-northwest of the city of Idaho Falls. By letter dated April 23, 2009, AES submitted a revised application to increase the facility's nominal capacity from 3 million separative work units (SWU)/year to 6 million SWUs/year. The applicant subsequently revised its license application by letter dated April 30, 2010.

The NRC staff has prepared the SER in support of this license application. The SER discusses the results of the safety review performed by the staff in the following areas: General information, organization and administration, integrated safety analysis (ISA) and ISA summary, radiation protection, nuclear criticality safety, chemical process safety, fire safety, emergency management, environmental protection, decommissioning, management measures, physical protection, and materials control and accountability.

**III. Further Information**

The SER is available electronically at the NRC's Electronic Reading Room at <http://www.nrc.gov/reading-rm/adams.html>. From this site, you can access the NRC's Agencywide Documents Access and Management System (ADAMS), which provides text and image files of NRC's public documents. The ADAMS Accession Number for the April 30, 2010, revised license application is ML101610549. The ADAMS Accession Number for the September 28, 2010 SER is ML102710296.
