Comment: Many commenters indicated their preferences with respect to the types of HAI measures that should be included in the HOP QDRP. One commenter recommended Surgical Care Improvement Project (SCIP) Infection, and the Surgical Site Infection measures (NQF #0299) that NHSN reports. Specifically, the commenter recommended the inclusion of this measure in conjunction with the "Ability for Providers with HIT to Receive Laboratory Data Electronically Directly into Their Qualified/Certified EHR System as Discrete Searchable Data" measure (NQF #0489). The commenter strongly believed the two measures would make a difference between life and death for patients with sepsis, deep wound or surgical site infections. With rapid diagnosis and timely receipt of lab results, healthcare providers are able to treat patients while they are being seen rather than necessitating a return visit or follow-up phone call. For HAI measure topics, one commenter recommended MRSA colonization prior to invasive surgery or at admission to an acute care facility, hand-hygiene adherence, and use of barrier precautions. One commenter opposed the inclusion of the catheter-associated urinary tract infections (UTIs) HAI because the commenter believed that UTIs are not fully preventable and stated that they are hard to diagnose at the time of admission without urine screening and cultures. Furthermore, the commenter was concerned with the high cost for screening all patients undergoing surgery in HOPDs and added that the practice is inconsistent with the "Diagnosis, Prevention and Treatment of Catheter-Associated Urinary Tract Infection in Adults: 2009 International Clinical Practice Guidelines from the Infectious Diseases Society of America", which recommended that catheter-associated asymptomatic bacteriuria should not be screened.

Response: We thank the commenters for their suggestions for HAI measure topics. We disagree with the statement that UTIs are not preventable. In fact, the majority of CAUTIs are preventable by avoiding unnecessary catheterization, and by limiting the duration of catheterization. In our view, it is unnecessary to screen all patients on arrival because the vast majority of patients do not have a urinary tract infection at arrival. Catheters are used too commonly, often without appropriate justification. Very often, many catheters are left in far too long and most hospitals do not have good systems to identify patients that need to

have the catheter removed. We are working with CDC to develop metrics of infection control and outcomes.

Comment: One commenter was very concerned about the outdated infection control data used by CMS to make policy decisions.

Response: We agree that there is a need for more current data on the actual rates of healthcare-associated infections and we are working closely with the CDC to obtain this information and performance metrics.

We thank the commenters for their input regarding the adoption of HAI quality measures in the HOP QDRP measure set.

C. Payment Reduction for Hospitals That Fail To Meet the HOP QDRP Requirements for the CY 2011 Payment Update

1. Background

Section 1833(t)(17)(A) of the Act, which applies to subsection (d) hospitals (as defined under section 1886(d)(1)(B) of the Act), requires that hospitals that fail to report data required for the quality measures selected by the Secretary, in the form and manner required by the Secretary under section 1833(t)(17)(B) of the Act, incur a 2.0 percentage point reduction to their OPD fee schedule increase factor, that is, the annual payment update factor. Section 1833(t)(17)(A)(ii) of the Act specifies that any reduction would apply only to the payment year involved and would not be taken into account in computing the applicable OPD fee schedule increase factor for a subsequent payment year.

In the CY 2009 OPPS/ASC final rule with comment period (73 FR 68769 through 68772), we discussed how the payment reduction for failure to meet the administrative, data collection, and data submission requirements of the HOP QDRP affected the CY 2009 payment update applicable to OPPS payments for HOPD services furnished by the hospitals defined under section 1886(d)(1)(B) of the Act to which the program applies. The application of a reduced OPD fee schedule increase factor results in reduced national unadjusted payment rates that apply to certain outpatient items and services provided by hospitals that are required to report outpatient quality data and that fail to meet the HOP QDRP requirements. All other hospitals paid under the OPPS receive the full OPPS payment update without the reduction.

The national unadjusted payment rates for many services paid under the OPPS equal the product of the OPPS conversion factor and the scaled relative weight for the APC to which the service is assigned. The OPPS conversion factor, which is updated annually by the OPD fee schedule increase factor, is used to calculate the OPPS payment rate for services with the following status indicators (listed in Addendum B to this final rule with comment period): "P," "Q1," "Q2," "Q3," "R," "S," "T," "V," "U," or "X." In the CY 2009 OPPS/ASC final rule with comment period (73 FR 68770), we adopted a policy that payment for all services assigned these status indicators would be subject to the reduction of the national unadjusted payment rates for applicable hospitals, with the exception of services assigned to New Technology APCs with assigned status indicator "S" or "T," and brachytherapy sources with assigned status indicator "U," which were paid at charges adjusted to cost in CY 2009. We excluded services assigned to New Technology APCs from the list of services subject to the reduced national unadjusted payment rates because the OPD fee schedule increase factor is not used to update the payment rates for these APCs.

In addition, section 1833(t)(16)(C) of the Act, as amended by section 142 of the Medicare Improvements for Patients and Providers Act of 2008 (MIPPA) (Pub. L. 110–275), specifically required that brachytherapy sources be paid during CY 2009 on the basis of charges adjusted to cost, rather than under the standard OPPS methodology. Therefore, the reduced conversion factor also was not applicable to CY 2009 payment for brachytherapy sources because payment would not be based on the OPPS conversion factor and, consequently, the payment rates for these services were not updated by the OPD fee schedule increase factor. However, in accordance with section 1833(t)(16)(C) of the Act, as amended by section 142 of the MIPPA, payment for brachytherapy sources at charges adjusted to cost expired on January 1, 2010. Therefore, in the CY 2010 OPPS/ASC final rule with comment period (74 FR 60641), we finalized our CY 2010 proposal, without modification, to apply the reduction to payment for brachytherapy sources to hospitals that fail to meet the quality data reporting requirements of the HOP QDRP for the CY 2010 OPD fee schedule increase factor.

The OPD fee schedule increase factor, or market basket update, is an input into the OPPS conversion factor, which is used to calculate OPPS payment rates. To implement the requirement to reduce the market basket update for hospitals that fail to meet reporting requirements, we calculate two conversion factors: A full market basket conversion factor (that is, the full conversion factor), and a reduced market basket conversion factor (that is, the reduced conversion factor). We then calculate a reduction ratio by dividing the reduced conversion factor by the full conversion factor. We refer to this reduction ratio as the "reporting ratio" to indicate that it applies to payment for hospitals that fail to meet their reporting requirements. Applying this reporting ratio to the OPPS payment amounts results in reduced national unadjusted payment rates that are mathematically equivalent to the reduced national unadjusted payment rates that would result if we multiplied the scaled OPPS relative weights by the reduced conversion factor. To determine the reduced national unadjusted payment rates that applied to hospitals that failed to meet their quality reporting requirements for the CY 2010 OPPS, we multiply the final full national unadjusted payment rate in Addendum B to the CY 2010 OPPS/ASC final rule with comment period by the CY 2010 OPPS final reporting ratio of 0.980 (74 FR 60642).

In the CY 2009 OPPS/ASC final rule with comment period (73 FR 68771 through 68772), we established a policy that the Medicare beneficiary's minimum unadjusted copayment and national unadjusted copayment for a service to which a reduced national unadjusted payment rate applies would each equal the product of the reporting ratio and the national unadjusted copayment or the minimum unadjusted copayment, as applicable, for the service. Under this policy, we apply the reporting ratio to both the minimum unadjusted copayment and national unadjusted copayment for those hospitals that receive the payment reduction for failure to meet the HOP QDRP reporting requirements. This application of the reporting ratio to the national unadjusted and minimum unadjusted copayments is calculated according to § 419.41 of our regulations, prior to any adjustment for hospitals' failure to meet the quality reporting standards according to § 419.43(h). Beneficiaries and secondary payers thereby share in the reduction of payments to these hospitals.

In the CY 2009 OPPS/ASC final rule with comment period (73 FR 68772), we established the policy that all other applicable adjustments to the OPPS national unadjusted payment rates apply in those cases when the OPD fee schedule increase factor is reduced for hospitals that fail to meet the requirements of the HOP QDRP. For example, the following standard adjustments apply to the reduced national unadjusted payment rates: The

wage index adjustment; the multiple procedure adjustment; the interrupted procedure adjustment; the rural sole community hospital adjustment; and the adjustment for devices furnished with full or partial credit or without cost. We believe that these adjustments continue to be equally applicable to payments for hospitals that do not meet the HOP QDRP requirements. Similarly, outlier payments will continue to be made when the criteria are met. For hospitals that fail to meet the quality data reporting requirements, the hospitals' costs are compared to the reduced payments for purposes of outlier eligibility and payment calculation. This policy conforms to current practice under the IPPS. In the CY 2010 OPPS/ASC final rule with comment period (74 FR 60642), we continued this policy. For a complete discussion of the OPPS outlier calculation and eligibility criteria, we refer readers to section II.G. of this CY 2011 OPPS/ASC final rule with comment period.

2. Reporting Ratio Application and Associated Adjustment Policy for CY 2011

In the CY 2011 OPPS/ASC proposed rule (75 FR 46376), we proposed to continue our established policy of applying the reduction of the OPD fee schedule increase factor through the use of a reporting ratio for those hospitals that fail to meet the HOP QDRP requirements for the full CY 2011 annual payment update factor. For the CY 2011 OPPS, the proposed reporting ratio was 0.980, calculated by dividing the reduced conversion factor of $66.930 by the full conversion factor of $68.267. The final CY 2011 OPPS reporting ratio is 0.980, calculated by dividing the reduced conversion factor of $67.530 by the full conversion factor of $68.876. We proposed to continue to apply the reporting ratio to all services calculated using the OPPS conversion factor. For the CY 2011 OPPS, we proposed to apply the reporting ratio, when applicable, to all HCPCS codes to which we have assigned status indicators "P," "Q1," "Q2," "Q3," "R," "S," "T," "V," "U," and "X" (other than new technology APCs to which we have assigned status indicators "S" and "T"). We proposed to continue to exclude services paid under New Technology APCs. We proposed to continue to apply the reporting ratio to the national unadjusted payment rates and the minimum unadjusted and national unadjusted copayment rates of all applicable services for those hospitals that fail to meet the HOP QDRP reporting requirements. We also proposed to continue to apply all other applicable standard adjustments to the OPPS national unadjusted payment rates for hospitals that fail to meet the requirements of the HOP QDRP. Similarly, we proposed to continue to calculate OPPS outlier eligibility and outlier payment based on the reduced payment rates for those hospitals that fail to meet the reporting requirements.

We did not receive any public comments on our CY 2011 proposal to apply the HOP QDRP reduction in the manner described in the paragraph above and, therefore, are finalizing our proposal, without modification. For the CY 2011 OPPS, we are applying a reporting ratio of 0.980 to the national unadjusted payments, minimum unadjusted copayments, and national unadjusted copayments for all applicable services for those hospitals failing to meet the HOP QDRP reporting requirements. This reporting ratio applies to HCPCS codes assigned status indicators "P," "Q1," "Q2," "Q3," "R," "S," "T," "U," "V," or "X," excluding services paid under New Technology APCs. All other applicable standard adjustments to the OPPS national unadjusted payment rates for hospitals that fail to meet the requirements of the HOP QDRP will continue to apply. We continue to calculate OPPS outlier eligibility and outlier payment based on the reduced rates for those hospitals that fail to meet the reporting requirements.

D. Requirements for HOPD Quality Data Reporting for CY 2012 and Subsequent Years

In order to participate in the HOP QDRP, hospitals must meet administrative, data collection and submission, and data validation requirements (if applicable). Hospitals that do not meet the requirements of the HOP QDRP, as well as hospitals not participating in the program and hospitals that withdraw from the program, will not receive the full OPPS payment rate update. Instead, in accordance with section 1833(t)(17)(A) of the Act, those hospitals will receive a reduction of 2.0 percentage points in their annual payment update factor for the applicable payment year. We established the payment determination requirements for the CY 2011 payment update in the CY 2010 OPPS/ASC final rule with comment period (74 FR 60642 through 60652).

In the CY 2011 OPPS/ASC proposed rule (75 FR 46376 through 46381), for payment determinations affecting the CY 2012 payment update, we proposed to implement the requirements listed below. Most of these requirements are the same as the requirements we implemented for the CY 2011 payment determination, with some proposed modifications.

1. Administrative Requirements

To participate in the HOP QDRP, we proposed that several administrative steps be completed. These steps would require the hospital to:

- Identify a QualityNet security administrator who follows the registration process located on the QualityNet Web site (*http://www.QualityNet.org*) and submits the information to the appropriate CMS-designated contractor. All CMS-designated contractors would be identified on the QualityNet Web site. The same person may be the QualityNet security administrator for both the Hospital Inpatient Quality Reporting Program and the HOP QDRP. From our experience, we believe that the QualityNet security administrator typically fulfills a variety of tasks related to the hospital's ability to participate in the HOP QDRP, such as: Creating, approving, editing and/or terminating QualityNet user accounts within the organization; monitoring QualityNet usage to maintain proper security and confidentiality measures; and serving as a point of contact for information regarding QualityNet and the HOP QDRP. The hospital would be required to maintain a current QualityNet security administrator for as long as the hospital participates in the program due to CMS information systems security requirements. While only a single QualityNet security administrator would be required for program purposes, we suggest to hospitals that it may be beneficial to have more than one QualityNet security administrator for back-up purposes.
- Register with QualityNet, regardless of the method used for data submission.
- Complete and submit an online participation form if this form (or a paper Notice of Participation form) has not been previously completed, if a hospital has previously withdrawn, or if the hospital acquires a new CCN. For HOP QDRP decisions affecting the CY 2012 payment determination, hospitals that share the same CCN would be required to complete a single online participation form. In the CY 2009 OPPS/ASC final rule with comment period (73 FR 68772), we implemented an online registration form and eliminated the paper form. At this time, the participation form for the HOP QDRP is separate from the Hospital Inpatient Quality Reporting Program and completing a form for each program is required. Agreeing to participate includes acknowledging that the data submitted to the CMS-designated

contractor would be submitted to CMS, shared with one or more other CMS contractors that support the implementation of the HOP QDRP and be publicly reported.

We proposed to update and retain the following deadlines, which we established in the CY 2010 OPPS/ASC final rule with comment period (74 FR 60643), for submitting the participation form:

Hospitals with Medicare acceptance dates on or after January 1, 2011: For the CY 2012 payment update, we proposed that any hospital that has a Medicare acceptance date on or after January 1, 2011 (including a new hospital and hospitals that have merged) must submit a completed participation form no later than 180 days from the date identified as its Medicare acceptance date on the CMS Online System Certification and Reporting (OSCAR) system. Hospitals typically receive a package notifying them of their new CCN after they receive their Medicare acceptance date. The Medicare acceptance date is the earliest date that a hospital can receive Medicare payment for the services that it furnishes. Completing the participation form would include supplying the name and address of each hospital campus that shares the same CCN.

The use of the Medicare acceptance date as beginning the timeline for HOP QDRP participation allows CMS to monitor more effectively hospital compliance with the requirement to complete a participation form because a hospital's Medicare acceptance date is readily available to CMS through its data systems. In addition, providing an extended time period to register for the program would allow newly functioning hospitals sufficient time to get their operations fully functional before having to collect and submit quality data. We invited public comment on this proposed policy.

Hospitals with Medicare acceptance dates before January 1, 2011: For the CY 2012 payment update, we proposed that any hospital that has a Medicare acceptance date on or before December 31, 2010 that is not currently participating in the HOP QDRP and wishes to participate in the CY 2012 HOP QDRP must submit a participation form by March 31, 2011. We proposed a deadline of March 31, 2011, because we believe it would give hospitals sufficient time to decide whether they wish to participate in the HOP QDRP, as well as put into place the necessary staff and resources to timely report data for first quarter CY 2011 services. This requirement would apply to all hospitals whether or not the hospital billed for payment under the OPPS.

Under our current requirements, hospitals that want to withdraw from participation must follow the same deadlines as hospitals that want to participate. We proposed to change this requirement. We proposed to lengthen the time during which hospitals may withdraw from participation because we believe that hospitals should be allowed more time to consider this decision. In addition, this increased time to withdraw is comparable programmatically to our approach under the Hospital Inpatient Quality Reporting Program (75 FR 23996 and 50231). Specifically, for the CY 2012 payment update, we proposed that any HOP QDRP participating hospital that wants to withdraw may do so at any time from January 1, 2011 to November 1, 2011. Hospitals that withdraw during this time period for the CY 2012 payment update would not be able to sign up to participate for the CY 2012 payment update, would have a 2.0 percentage point reduction in their CY 2012 payment update, and would be required to resubmit a participation form in order to participate for purposes of any future payment updates. We note that once a hospital has submitted a participation form, it is considered to be an active HOP QDRP participant until such time as the hospital submits a withdrawal form to CMS or the facility is designated as closed in the CMS OSCAR system. We invited public comment on this proposed policy.

We did not receive any public comments on our CY 2011 proposals for HOP QDRP administrative requirements for the CY 2012 payment determination; therefore, we are finalizing our proposals without modification.

2. Data Collection and Submission Requirements

a. General Data Collection and Submission Requirements

In the CY 2011 OPPS/ASC proposed rule (75 FR 46377 through 46379), we proposed that, to be eligible for the full CY 2012 OPPS payment update, hospitals would be required to:

- Submit data: Hospitals that would be participating in the HOP QDRP would be required to submit data for each applicable quarter by the deadline posted on the QualityNet Web site; there must be no lapse in data submission. For the CY 2012 annual payment update, the applicable quarters would be as follows: 3rd quarter CY 2010, 4th quarter CY 2010, 1st quarter CY 2011, and 2nd quarter CY 2011. Hospitals that did not participate in the CY 2011 HOP QDRP, but would like to participate in the CY 2012 HOP QDRP, and that have a Medicare acceptance date on the OSCAR system before January 1, 2011, would begin data submission for 1st quarter CY 2011 services using the CY 2012 measure set that would be finalized in the CY 2011 OPPS/ASC final rule with comment period. For those hospitals with Medicare acceptance dates on or after January 1, 2011, data submission must begin with the first full quarter following the submission of a completed online participation form. For the claims-based measures, we would calculate the measures using the hospital's Medicare claims data. For the CY 2012 payment update, we would utilize paid Medicare FFS claims submitted prior to January 1, 2011, to calculate these measures. For the structural measure to be used for the CY 2012 payment determination, hospitals would be required to submit data beginning with January 1, 2011 discharges using a Web-based tool available on QualityNet beginning in 2011.

Sampling and Case Thresholds: It would not be necessary for a hospital to submit data for all eligible cases for some measures if sufficient eligible case thresholds are met. Instead, for those measures where a hospital has a sufficiently large number of cases, the hospital would sample cases and submit data for these sampled cases rather than submitting data from all eligible cases. This sampling scheme, which includes the minimum number of cases based upon case volume, would be set out in the HOPD Specifications Manual at least 3 months in advance of the required data collection. We proposed to change this notification timeframe for this sampling scheme to at least 3 months from at least 4 months to be consistent with the HOPD Specifications Manual release schedule. Hospitals would be required to meet the sampling requirements for required quality measures each reporting quarter.

In addition, in order to reduce the burden on hospitals that treat a low number of patients but otherwise meet the submission requirements for a particular quality measure, hospitals that have five or fewer claims (both Medicare and non-Medicare) for any measure included in a measure topic in a quarter would not be required to submit patient level data for the entire measure topic for that quarter. Even if hospitals would not be required to submit patient level data because they have five or fewer claims (both Medicare and non-Medicare) for any measure included in a measure topic in

a quarter, we proposed that they may voluntarily do so.

Hospitals would be required to submit all required data according to the data submission schedule that will be available on the QualityNet Web site (*https://www.QualityNet.org*). This Web site meets or exceeds all current HIPAA requirements. Submission deadlines would, in general, be 4 months after the last day of each calendar quarter. Thus, for example, the submission deadline for data for services furnished during the first quarter of CY 2011 (January–March 2011) would be on or around August 1, 2011. The actual submission deadlines would be posted on the *http://www.QualityNet.org* Web site.

Hospitals would be required to submit data to the OPPS Clinical Warehouse using either the CMS Abstraction and Reporting Tool for Outpatient Department (CART–OPD) measures or the tool of a third-party vendor that meets the measure specification requirements for data transmission to QualityNet.

Hospitals would be required to submit quality data through My QualityNet, the secure portion of the QualityNet Web site, to the OPPS Clinical Warehouse. The OPPS Clinical Warehouse, which is maintained by a CMS-designated contractor, would submit the OPPS Clinical Warehouse data to CMS. OPPS Clinical Warehouse data are not currently considered to be Quality Improvement Organization (QIO) data; rather, we consider such data to be CMS data. However, it is possible that the information in the OPPS Clinical Warehouse may at some point become QIO information. If this occurs, these data would also become protected under the stringent QIO confidentiality regulations in 42 CFR part 480.

Hospitals would be required to collect HOP QDRP data from outpatient episodes of care to which the required measures apply. For the purposes of the HOP QDRP, an outpatient "episode of care" is defined as care provided to a patient who has not been admitted as an inpatient, but who is registered on the hospital's medical records as an outpatient and receives services (rather than supplies alone) directly from the hospital. Every effort would be made to ensure that data elements common to both inpatient and outpatient settings are defined consistently for purposes of quality reporting (such as "time of arrival").

Hospitals would be required to submit quality data using the CCN under which the care was furnished.

To be accepted into the OPPS Clinical Warehouse, data submissions, at a minimum, would be required to be timely, complete, and accurate. Data submissions are considered to be "timely" when data are successfully accepted into the OPPS Clinical Warehouse on or before the reporting deadline. A "complete" submission would be determined based on whether the data satisfy the sampling criteria that are published and maintained in the HOPD Specifications Manual, and must correspond to both the aggregate number of cases submitted by a hospital and the number of Medicare claims the hospital submits for payment. We are aware of "data lags" that occur when hospitals submit claims, then cancel and correct those claims; efforts would be made to take such events into account that can change the aggregate Medicare case counts. To be considered "accurate," submissions would be required to pass validation, if applicable.

We strongly recommend that hospitals review OPPS Clinical Warehouse feedback reports and the HOP QDRP Provider Participation Reports that are accessible through their QualityNet accounts. These reports enable hospitals to verify whether the data they or their vendors submitted were accepted into the OPPS Clinical Warehouse and the date/time that such acceptance occurred. We also note that irrespective of whether a hospital submits data to the OPPS Clinical Warehouse itself or uses a vendor to complete the submissions, the hospital would be responsible for ensuring that HOP QDRP requirements are met.

Finally, during the past two years of the HOP QDRP, the submission of population and sampling data was not required, though hospitals could submit, on a voluntary basis, the aggregate numbers of outpatient episodes of care which are eligible for submission under the HOP QDRP and sample size counts. These aggregated numbers of outpatient episodes represent the number of outpatient episodes of care in the universe of all possible cases eligible for data reporting under the HOP QDRP. For the CY 2012 payment update, we proposed to require submission of this population and sample size data. Specifically, we proposed that hospitals must submit on a quarterly basis, aggregate population and sample size counts for Medicare and non-Medicare encounters for the measure populations for which chart-abstracted data must be submitted. Under this proposal, hospitals would submit aggregate population and sample size counts for measure populations even if the hospital had not treated patients in a specific measure population; that is, if a hospital has not treated any patients in a specific HOP QDRP measure population, the hospital would still be required to submit a zero for its quarterly aggregate population and sample counts to meet the requirement.

We believe that hospitals have had sufficient time to become familiar with HOP QDRP data and to develop data systems necessary to support this requirement. We view it as vital for quality data reporting for hospitals to be able to determine accurately their aggregate population and appropriate sampling size data to assess their completeness of data reporting. We rely on hospitals to properly sample cases where sampling occurs so that representative data are submitted; for hospitals to correctly sample, it is necessary for them to be able to determine their aggregate population sizes. In addition, we believe it is beneficial for hospitals to develop systems that can determine whether or not they have furnished services or billed for five or fewer cases for a particular measure topic on a quarterly basis.

We proposed that the deadlines for the reporting of aggregate numbers of outpatient episodes of care and sample size counts would be the same as those for the reporting of data for the measures requiring chart abstraction, and these deadlines would be posted on the data submission schedule that would be available on the QualityNet Web site. Hospitals would be permitted to submit this information prior to the deadline; this would allow CMS to advise hospitals regarding their incomplete submission status as appropriate and give hospitals sufficient time to make appropriate revisions before the data submission deadline.

We plan to use the aggregate population and sample size data to assess data submission completeness and adherence to sampling requirements for Medicare and non-Medicare patients.

We invited public comment on these proposed requirements. The public comments we received and our responses are outlined below.

Comment: One commenter supported the requirement that hospital outpatient departments report quality data under the HOP QDRP. This commenter stated a belief that payment incentives to increase the reporting of data by hospital outpatient departments represent a useful tool in promoting transparency.

Response: We thank the commenter for supporting hospital outpatient quality data reporting under the HOP QDRP, the use of the 2.0 percentage

point reduction for hospitals that do not successfully report quality data, and the use of payment incentives to promote transparency.

Comment: One commenter stated that frontline workers are important in data collection and reporting for the HOP QDRP and that the best interests of patients would be served if frontline healthcare workers are guaranteed a voice in the development and implementation of mechanisms to collect quality data.

Response: We agree with the commenter that those that perform the work for data collection and reporting for the HOP QDRP should have a voice in the development and implementation of mechanisms to collect quality data. To that end, we encourage these workers as well as other members of the public to participate in the comment process for the OPPS/ASC proposed rule with comment period. In addition, CMS offers educational programs, including programs that include discussions of proposed and final HOP QDRP requirements and encourages the public to submit input directly to the HOP QDRP support contractor or via a question and answer tool located at *https://cms-ocsq.custhelp.com/cgi-bin/cms_ocsq.cfg/php/enduser/home.php?p_sid=_*crJryj&p_accessibility=0&p_redirect=*.

Comment: One commenter asked for the definition of an outpatient and whether this definition would include patients obtaining testing only or must patients be in an outpatient bed.

Response: The term "outpatient" is defined in the Medicare Claims Processing Manual, Chapter 1, Section 50.3.1. This section states that "outpatient" means a person who has not been admitted as an inpatient but who is registered on the hospital or critical access hospital (CAH) records as an outpatient and receives services (rather than supplies alone) directly from the hospital or CAH." Therefore, "outpatients" could include patients solely obtaining diagnostic services, as well as those patients who have been placed in a bed, provided they meet the applicable definition of "outpatient."

Comment: Some commenters agreed that hospitals with five or fewer claims for a specific measure should not be required to submit patient-level data for the entire measure topic for that quarter, but should be allowed to submit data voluntarily. These commenters stated their belief that this exception should apply to hospitals with less than six Medicare claims, not less than six claims across all payers.

Response: We thank the commenters for supporting our policy to not require hospitals with five or fewer claims for a specific measure for a quarter to submit data while allowing these hospitals to report data voluntarily. With respect to the commenters' suggestion that we modify our policy to apply to five or fewer Medicare claims (rather than five or fewer Medicare and non-Medicare claims), we selected more than 5 cases per quarter (more than 20 cases per year) as the minimum threshold to ensure that the vast majority of hospitals with sufficient caseload would be required to submit data, while easing the burden on hospitals whose patient counts were too small to reliably report hospital measure results. Because we collect data on both Medicare and non-Medicare patients, we believe it is appropriate to set our case thresholds using the population for which we are collecting data, which includes both Medicare and non-Medicare patients.

Comment: One commenter stated that the term "encounter" is not defined in the outpatient setting, and it is not so clear cut. This commenter questioned for what purpose does the CMS need population and sampling data as the proposed rule was not clear about the ultimate purpose for these data collections.

Response: We disagree with the commenter that the term "encounter" is not defined in the outpatient setting. We refer the commenter to the definition of hospital outpatient "encounter" in the CMS Medicare Benefit Policy Manual, Chapter 6, Section 20.3, which states the following: "A hospital outpatient 'encounter' is a direct personal contact between a patient and a physician, or other person who is authorized by State licensure law and, if applicable, by hospital or CAH staff bylaws, to order or furnish hospital services for diagnosis or treatment of the patient." Regarding the ultimate purpose of reported population and sampling data, as we have stated previously, (74 FR 60645), and in this proposed rule with comment period, we plan to use the aggregate population and sample size data to assess data submission completeness and adherence to sampling requirements for Medicare and non-Medicare patients. Further, as we stated in our proposal, we view it as vital for quality data reporting that hospitals be able to determine accurately their aggregate population and appropriate sampling size data to assess their completeness of data reporting.

Comment: Many commenters stated their belief that collecting population and sampling data for outpatient measures is burdensome and time-consuming for hospitals. These commenters urged CMS to not finalize this provision to collect such data as the challenges to do so are particularly great for both larger hospitals and smaller hospitals. Some of these commenters cited specific underlying factors for hospitals of certain size; that larger hospitals have very large patient populations and smaller hospitals have less integrated HIT systems. Some commenters expressed concern that identifying outpatient populations is difficult and that it may not be possible for an all-payer patient population because outpatient billing is more varied and less defined than inpatient billing. One commenter stated that unlike inpatient information which is located in a single facility, outpatient population and sample size data may be located in diverse outpatient settings and a hospital's ability to manage this data from diverse sources could be problematic because of the time, cost, and resource commitment for this requirement. One commenter stated that in some cases hospital charges are written off or not billed in favor of physician charges so querying the UB–04 data for such cases would retrieve an incomplete patient population and would exclude non-Medicare patients. One commenter suggested that CMS wait until the meaningful use implementation of EHRs is completed before requiring the reporting of population and sampling data because this would eliminate the burden on hospital staff to pull data from multiple sources to obtain population size. One commenter stated that it foresaw the implementation of the population and sample data reporting requirement as extremely problematic.

Response: We understand the commenters' concerns that outpatient billing could be more varied and less defined than inpatient billing and that there could be issues with charge write-offs and other billing factors that could complicate a hospital's determination of outpatient population sizes. We acknowledge that the adoption of EHRs could facilitate the determination of outpatient population sizes. We also acknowledge that we have seen evidence that some hospitals would not be able to meet the reporting of population and sampling size requirement due to issues such as the information being located in multiple areas. We have noted this issue in previous rulemaking (74 FR 60645). We note that the HOP QDRP is entering its third year of quality data reporting and believe that it would be beneficial for hospitals to develop systems that can determine their population sizes for

outpatient quality measures so they can assess their completeness of reporting and accuracy of their sample size selections.

However, after consideration of the public comments we received, we have decided to not finalize our proposal to require the reporting of population and sample size data and instead continue our policy of accepting the submission of this information on a voluntary basis for the CY 2012 payment determination. In the past we have recognized that collecting this information can be burdensome and time consuming for some hospitals for their outpatient populations. Based upon the comments we received, we are convinced that these issues remain for a significant number of hospitals.

For all other CY 2011 proposals for general data collection and submission requirements (that is, those proposals aside from the population and sampling data reporting requirement), we did not receive any comments and we are finalizing these proposals without modification.

b. Extraordinary Circumstance Extension or Waiver for Reporting Quality Data

In our experience, there have been times when hospitals have been unable to submit required quality data due to extraordinary circumstances that are not within their control. It is our goal to not penalize hospitals for such circumstances and we do not want to unduly increase their burden during these times. Therefore, in the CY 2010 OPPS/ASC final rule with comment period (74 FR 60046 through 600647), we adopted a process for hospitals to request and for CMS to grant extensions or waivers with respect to the reporting of required quality data when there are extraordinary circumstances beyond the control of the hospital. In the CY 2011 OPPS/ASC proposed rule (75 FR 46379), we proposed to retain these procedures with some proposed modifications.

Under the process, in the event of extraordinary circumstances, such as a natural disaster, not within the control of the hospital, for the hospital to receive consideration for an extension or waiver of the requirement to submit quality data for one or more quarters, a hospital would submit to CMS a request form that would be made available on the QualityNet Web site. The following information should be noted on the form:

- Hospital CCN;
- Hospital Name;
- CEO and any other designated personnel contact information, including name, e-mail address, telephone number, and mailing address (must include a physical address; a post office box address is not acceptable);
- Hospital's reason for requesting an extension or waiver;
- Evidence of the impact of the extraordinary circumstances, including but not limited to photographs, newspaper and other media articles; and
- A date when the hospital would again be able to submit HOP QDRP data, and a justification for the proposed date.

The request form would be signed by the hospital's CEO. A request form would be required to be submitted within 45 days of the date that the extraordinary circumstance occurred. We proposed to remove the requirement found in the CY 2010 OPPS/ASC final rule with comment period (74 FR 60646) that the hospital include an identified reason for requesting an extension or waiver in addition to the hospital's reason for requesting an extension or waiver as a requirement. We believe that this requirement is redundant and removing it will reduce unnecessary hospital burden.

Following receipt of such a request, CMS would—

(1) Provide a written acknowledgement using the contact information provided in the request, to the CEO and any additional designated hospital personnel, notifying them that the hospital's request has been received;

(2) Provide a formal response to the CEO and any additional designated hospital personnel using the contact information provided in the request notifying them of our decision; and

(3) Complete any CY 2011 request for Extraordinary Circumstance Extension or Waiver for Reporting Quality Data requests reviews and communicate the results of these determinations within 90 days following our receipt of such a request. We proposed to add a deadline for a CMS response so that hospitals can have a designated timeline for when they should receive such a response.

This proposal would not preclude us from granting waivers or extensions to hospitals that have not requested them when we determine that an extraordinary circumstance, such as an act of nature (for example, hurricane) affects an entire region or locale. If we make the determination to grant a waiver or extension to hospitals in a region or locale, we would communicate this decision to hospitals and vendors through routine communication channels, including but not limited to e-mails and notices on the QualityNet Web site. We invited public comment on these proposals.

We did not receive any public comments on our CY 2011 proposals for extraordinary circumstance extensions or waivers for the reporting of quality data under the HOP QDRP; therefore, we are finalizing our proposals without modification.

3. HOP QDRP Validation Requirements for Chart-Abstracted Data: Data Validation Approach for CY 2012 and Subsequent Years

a. Background

In the CY 2010 OPPS/ASC proposed rule, we solicited public comments on our proposed validation methodology (74 FR 35403 through 35404). We stated that we are considering building upon what we proposed as a validation approach for CY 2012 and subsequent years by, in addition to selecting a random sample of hospitals for validation purposes, selecting targeted hospitals based on criteria designed to measure whether the data they have reported raises a concern regarding data accuracy. These possible targeting criteria included identified abnormal data patterns, whether a hospital had previously failed validation, whether a hospital had not been previously selected for validation for 2 or more consecutive years, and some combination of some or all of the criteria.

We solicited public comments on whether such criteria, or another approach, should be applied in future years. We especially solicited suggestions for additional criteria that could be used to target hospitals for validation. We greatly appreciate all the public comments we received regarding the validation process proposed for CY 2012 and subsequent years. We responded to public comments on our proposed methodology for CY 2012 and subsequent years but did not finalize a validation process in the CY 2010 OPPS/ASC final rule with comment period 74 FR 60650 through 60652). We noted that we would take all of the comments we received into account when we develop our validation proposals for CY 2012.

b. Data Validation Requirements for CY 2012

In the CY 2011 OPPS/ASC proposed rule (75 FR 46379 through 46381), similar to our proposed and adopted validation plan for the FY 2012 Hospital Inpatient Quality Reporting Program, we proposed to validate data from 800 randomly selected hospitals (approximately 20 percent of all participating HOP QDRP hospitals) each year, beginning with CY 2012 payment determination. We proposed to sample 800 hospitals because we believe, based

upon sampling simulation studies using HOP QDRP data, that sampling this number would provide a sufficient number for a representative sample of hospitals on various strata (for example, urban, rural, bed-size) while significantly reducing overall hospital burden. For the CY 2012 payment determination, we would select only from hospitals participating for the CY 2012 payment update, so if a hospital submitted data for the CY 2011, but withdrew, this hospital would not be deemed as eligible for selection. We noted that because 800 hospitals would be selected randomly, every HOP QDRP-participating hospital would be eligible each year for validation selection.

For each selected hospital, we proposed to randomly select up to a total of 48 self-reported cases from the total number of cases (12 per quarter) that the hospital successfully submitted to the OPPS Clinical Warehouse. However, if a selected hospital has submitted less than 12 cases in any quarter, only those cases available would be validated. We believe that validating a larger number of cases per hospital, but only for 800 randomly selected hospitals, and validating these cases at the measure level (rather than the data element level) has several benefits. We proposed up to a total of 48 cases per hospital because a sample size of about 50 is considered sufficient for detecting relationships and correlations, so a larger sample size is not deemed necessary (for reference, see Wilson Van Voohis, Carmen R. and Morgan, Betsey L., (2007), *Understanding Power and Rules of Thumb for Determining Sample Sizes, Tutorials in Quantitative Methods for Psychology*, Volume 3(2), Pages 43–50). We believe that this approach is suitable for HOP QDRP data because it will: Produce a more reliable estimate of whether a hospital's submitted data have been abstracted accurately; provide more statistically reliable estimates of the quality of care delivered in each selected hospital as well as at a national level; and reduce overall hospital burden because most hospitals will not be selected to undergo validation each year.

We would not be selecting cases stratified by measure or topic; our interest is whether the data submitted by hospitals accurately reflect the care delivered and documented in the medical record, not what the accuracy is by measure or whether there are differences by topic. Additionally, we note that, due to the distribution of HOP QDRP data submitted to date by hospital size, the data do not lend themselves to sampling by topic area. Specifically, small hospitals tend to have more AMI Cardiac Care cases and fewer Surgical Care cases, whereas, larger hospitals tend to have few if any AMI Cardiac Care cases and more Surgical Care cases.

Analysis of submitted HOP QDRP data indicate that this sampling design would provide sufficient number of denominator cases per measure for determination of national and individual hospital measure estimates with acceptable levels of statistical certainty.

We proposed to sample data for April 1, 2010 to March 31, 2011 services because this would provide a full year of the most recent data possible to use for the purpose of completing the validation in sufficient time for us to make the CY 2012 payment determinations.

A designated CMS contractor would, each quarter that applies to the validation, ask each of the 800 selected hospitals to submit medical documentation for up to 12 randomly selected cases submitted to and accepted by the HOP QDRP Clinical Warehouse. The CMS contractor would request paper copies of medical documentation corresponding to selected cases from each hospital via certified mail or other trackable method that requires a hospital representative to sign for the request letter; a trackable method would be utilized so that CMS would be assured that the hospital received the request. The hospital would have 45 calendar days from the date of the request as documented in the request letter to submit the requested documentation and have the documentation received by the CMS contractor. If the hospital does not comply within 30 calendar days of receipt of the initial medical documentation request, the CMS contractor would send a second letter by certified mail or other trackable method to the hospital, reminding the hospital that paper copies of the requested documentation must be submitted and received within 45 calendar days following the date of the initial CMS contractor request. If the hospital does not submit the requested documentation and the documentation is not received by the CMS contractor within the 45 calendar days, then the CMS contractor would assign a "zero" score to each data element for each selected case and the case would fail for all measures in the same topic (for example, OP–6 and OP–7 measures for a Surgical Care case).

We proposed that the letter from the designated CMS contractor would be addressed to the hospital's medical record staff identified by the hospital for the submission of records under the Hospital Inpatient Quality Reporting Program (that is, the hospital's medical records staff identified by the hospital to their State QIO). If CMS has evidence that the hospital received both letters requesting medical records, the hospital would be deemed responsible for not returning the requested medical record documentation and the hospital would not be allowed to submit such medical documentation as part of its reconsideration request so that information not utilized in making a payment determination is not included in any reconsideration request.

Once the CMS contractor receives the requested medical documentation, the contractor would independently reabstract the same quality measure data elements that the hospital previously abstracted and submitted, and the contractor would then compare the two sets of data to determine whether the two sets of data match. Specifically, the contractor would conduct a measures level validation by calculating each measure within a submitted case using the independently reabstracted data and then comparing this to the measure reported by the hospital; a percent agreement would then be calculated. Specifically, the validation score for a hospital would equal the total number of measure matches divided by the total number of measures multiplied by 100 percent.

This method is the same as recommended in the CMS Hospital Value-Based Purchasing Report to Congress and is illustrated more fully on pages 83–84 of this report which can be found on our Web site at: *http://www.cms.hhs.gov/AcuteInpatientPPS/downloads/HospitalVBPPlanRTCFINALSUBMITTED2007.pdf.* We believe that this approach is appropriate and it was supported by many commenters when we requested comment on HOP QDRP validation requirements outlined in the CY 2010 OPPS/ASC proposed rule (74 FR 35402 through 35403; 74 FR 60647 through 60652).

To receive the full OPPS payment update, we proposed that hospitals must attain at least a 75 percent validation score, based upon our validation process, for the designated time period. We have selected 75 percent as the threshold for the validation score because we believe this level is reasonable for hospitals to achieve while still ensuring accuracy of the data. Additionally, this level is consistent with what we proposed and adopted for the Hospital Inpatient Quality Reporting Program (75 FR 23993 and 75 FR 50226). Since we are not validating all hospital measures submitted, it is necessary to calculate a confidence

interval that incorporates sampling error. We would use the upper bound of a one-tailed 95 percent confidence interval to estimate the validation score. We proposed to use a one-tail confidence interval to calculate the validation score because it appropriately reflects our concern of whether the confidence interval for the calculated validation score includes or is above the 75 percent validation threshold for a hospital to be considered as submitting accurate data. If the calculated upper limit is above the required 75 percent validation score threshold, we would consider a hospital's data to be "validated" for payment purposes. The use of a one-tailed confidence interval and the 75 percent and threshold level are the same as those finalized for the Hospital Inpatient Quality Reporting Program for FY 2012 payment determinations (75 FR 23991 through 23993).

For derivation of the upper bound of a one-tailed 95 percent confidence interval we proposed to use a binomial distribution approach as we are looking at the percentage of measures submitted by a hospital matching what is calculated from the reabstracted data. Since the measure match rate for each hospital is a proportion, a binomial approach is appropriate, see Pagano, Robert R., (1990), *Understanding Statistics in the Behavioral Sciences,* 3rd Edition, Pages 175–188.

Thus, we proposed the following formula which includes a finite population correction factor and a continuity correction factor for calculating the upper bound of the one-tailed 95 percent confidence interval:

$$\textbf{Upper Confidence Limit} = p + 1.645\left(\sqrt{\frac{p\,(1-p)}{n}}\right)\left(\sqrt{\frac{N-n}{N-1}}\right)+\frac{1}{2n}$$

In this formula, N represents the population for the reporting year, n represents the sample size for the reporting year, p (calculated as a percentage) represents the validation score for the reporting year (that is, the percentage of measures matching), and 1-p represents the percentage of measures not matching. It should be noted that a confidence interval would not need to be calculated for hospitals that did not have enough cases to sample as the confidence interval is equal to zero (when the value of N is equal to n, N minus n equals zero and the upper confidence limit is equal to the validation score in the above formula). In addition, a confidence interval would not need to be calculated for those hospitals that have a validation score, p, that is greater than or equal to 75 percent because the hospital has attained the minimum threshold; the upper bound of any calculated confidence interval would be 75 percent or greater.

For further information on the proposed methodology for calculation of a 95 percent confidence interval for a binomial distribution utilizing a finite population correction, see *http://itl.nist.gov/div898/handbook/prc/section2/prc24.htm* and *http://courses.wcupa.edu/rbove/Berenson/10th%20ed%20CD-ROM%20topics/section7_3.pdf.*

We solicited public comments on this proposed validation methodology. The public comments we received and our responses are outlined below.

Comment: Several commenters supported the proposal to validate the accuracy of a hospital's measurement rate rather than on individual data elements and stated that by focusing on the hospital's measure rate, CMS is focusing on the information most important to patient care.

Response: We thank the commenters and appreciate their support. We agree that by utilizing a match rate at the measure level, we are focusing on the information most relevant to measuring the accuracy of this data which is important to patient care.

Comment: Several commenters supported the proposed validation approach of reviewing 48 medical charts (12 per quarter) from 800 randomly selected hospitals each year with the review assessing the accuracy of each hospital's measure rate, reflecting whether or not the hospital classified patients appropriately into the measure denominators and numerators. Some of these commenters stated their belief that this approach holds promise as a reasonable approach to ensure the accuracy of the data.

Response: We thank the commenters and appreciate their support. We agree with the commenters that the proposed validation process beginning with CY 2012 is an improved and reasonable approach for ensuring data accuracy. We also agree that a validation process is important in public reporting of quality data and believe that consistency between quality data reporting programs is important. Regarding the commenters who stated that our proposed validation method for assessing accuracy reflects whether or not the hospital classified patients appropriately into the measure denominators and numerators, we want to clarify that what we are assessing is whether, for each selected hospital-reported measure, the data that the hospital reported matches what is determined by independent abstraction. We are not assessing whether the hospital classified patients appropriately into the measure denominators and numerators.

Comment: One commenter disagreed with the random sampling of hospitals methodology and believed that all hospitals should be held accountable equally via a valid sample based on local practice patterns. This commenter also urged CMS to delegate targeted reviews to the State QIOs on a more proactive basis so that they are addressed in a more immediate timeframe, not leaving it to chance that a hospital with poor data quality will be identified randomly.

Response: Under the HOP QDRP, all hospitals are responsible for submitting accurate data. Because all reporting hospitals will be subject to selection for validation each payment determination year, we believe that all hospitals will have incentive to maintain data quality. Regarding the use of State QIOs in performing targeted reviews, the HOP QDRP was implemented separately from the QIO program and State QIOs have not been involved with the HOP QDRP to date. We note that we intend to provide support for data quality issues to individual hospitals through existing support mechanisms, including QualityNet reports and existing support contractors. In addition, we have included criteria aimed at data quality concerns among our targeting criteria for data validation conditions under consideration for CY 2013 and subsequent years.

Comment: Several commenters agreed with having a minimum of 75 percent reliability from chart abstraction for hospitals to pass validation. These commenters stated their view that adopting the same approach regarding validation for the inpatient and

outpatient quality measure programs enhanced consistency between the two programs. One commenter supported the proposed validation program for outpatient data reporting as it is harmonized with the inpatient program. One commenter stated its recognition of the important role of validation in the public reporting process and because the proposed process mirrors some of the current validation processes they supported the proposed approach.

Response: We thank the commenters and appreciate their support. We agree that consistency between quality data reporting programs is important. We note that we strive to maintain consistency between the inpatient and outpatient data reporting programs, with differences occurring due to differences in data or data systems between the programs.

Comment: One commenter stated that the proposed validation requirements are reasonable and would be acceptable to providers if it were the only Federal data submission requirement. This commenter was concerned that the record requests for validation would supplement those already established as part of Federal integrity audit processes (for example, RAC, Medicaid Integrity, ZPIC, and MAC) and facilities would receive multiple requests from each contracted entity significantly increasing hospital provider's labor investment and costs. This commenter urged CMS to review the validation process with respect to other data requirements rather than seeing it as a single request, and to consider the operational impact that receiving multiple audit entity requests will have on any single provider.

Response: We understand the commenter's concern regarding multiple Federal medical record requests. For HOP QDRP validation, we have worked to limit overall burden by reducing the number of hospitals participating annually in validation through our random sampling of hospitals. In addition, hospitals will be reimbursed for photocopying and mailing costs as they are under the Hospital Inpatient Quality Reporting Program, thus, reducing the burden in submitting medical record documentation for HOP QDRP validation purposes. We agree that efforts should be made to keep record requests for validation purposes at the minimum necessary to ensure accuracy of submitted data and will consider ways to do so in future rulemaking.

Comment: Some commenters asked if their assumption that validation of the Imaging Efficiency measures would not be required as part of the data validation process since the analysis is done through claims data is correct.

Response: The commenters' assumption is correct. Validation of the Imaging Efficiency measures would not be required as part of the data validation process because that process, at the present time, only applies to chart-abstracted measures.

Comment: One commenter recommended a phased-in approach, with the first year being a "test run" to allow hospitals the opportunity to become familiar with the HOP QDRP validation program.

Response: We believe the commenter is asking CMS to allow hospitals to first receive experience with the validation process without their payment being affected. We also believe that our validation process for the CY 2011 payment determination (74 FR 60647 through 60648) fulfills this recommendation.

After consideration of the public comments we received we are adopting as final, without modification, our proposals regarding validation for the CY 2012 payment determination.

c. Additional Data Validation Conditions under Consideration for CY 2013 and Subsequent Years

In the CY 2011 OPPS/ASC proposed rule (75 FR 46381), we stated that we are considering building upon what we proposed as a validation approach for the HOP QDRP. We are considering, in addition to selecting a random sample of hospitals for validation purposes, selecting targeted hospitals based on criteria designed to measure whether the data they have reported raises a concern regarding data accuracy. Because hospitals have gained little experience with validation under the HOP QDRP, we are considering this approach for possible use beginning with the CY 2013 payment determination. Examples of targeting criteria could include:

- Abnormal data patterns identified such as consistently high HOP QDRP measure denominator exclusion rates resulting in unexpectedly low denominator counts;
- Whether a hospital had previously failed validation;
- Whether a hospital had not been previously selected for validation for 2 or more consecutive years;
- Whether a hospital had low submitted case numbers relative to population sizes; and/or
- Whether a hospital had any extreme outlier values for submitted data elements.

We invited comment on whether, in addition to random sampling for validation, we should use targeted validation and, if so, what criteria for targeting we should adopt.

Comment: One commenter believed that no single hospital should be at risk for being selected for validation for multiple years and that targeting criteria should be used to ensure that hospitals are not over-selected.

Response: We understand the commenter's concern that hospitals could be selected for validation in multiple years due to the use of targeting criteria. We will take this comment into consideration as we consider whether to propose targeting criteria that could result in a hospital being selected for validation for multiple years as a part of the validation process.

We thank the commenters for their views on these issues and will take them into account when considering further criteria for the validation process for CY 2013 and subsequent years. We note that for the CY 2013 payment determination, HOP QDRP quality data reporting will have been completed for four payment determinations: CYs 2009, 2010, 2011, and 2012. Further, hospitals will have had the opportunity to learn from the validation process for the CY 2011 and CY 2012 payment determinations. We also believe that all of the targeting criteria we discuss above are reasonable. We intend to propose targeting criteria in the validation process for CY 2013 and subsequent years in our CY 2012 OPPS/ASC proposed rule.

E. HOP QDRP Reconsideration and Appeals Procedures

When the Hospital Inpatient Quality Reporting Program was initially implemented, it did not include a reconsideration process for hospitals. Subsequently, we received many requests for reconsideration of those payment decisions and, as a result, established a process by which participating hospitals would submit requests for reconsideration. We anticipated similar concerns with the HOP QDRP and, therefore, in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66875), we stated our intent to implement for the HOP QDRP a reconsideration process modeled after the reconsideration process we implemented for the Hospital Inpatient Quality Reporting Program. In the CY 2009 OPPS/ASC final rule with comment period (73 FR 68779), we adopted a mandatory reconsideration process that applied to the CY 2010 payment decisions. In the CY 2010 OPPS/ASC final rule with comment period (74 FR 60654 through

60655), we continued this process for the CY 2011 payment update. In the CY 2011 OPPS/ASC proposed rule (75 FR 46381 through 46382), we proposed to continue this process for the CY 2012 payment update with some modification. Under this proposed process, the hospitals must—

• Submit to CMS, via QualityNet, a Reconsideration Request form that would be made available on the QualityNet Web site; this form would be submitted by February 3, 2012, and would contain the following information:

oo Hospital CCN.

oo Hospital Name.

oo CMS-identified reason for failure (as provided in any CMS notification of failure to the hospital).

oo Hospital basis for requesting reconsideration. This would identify the hospital's specific reason(s) for believing it met the HOP QDRP requirements and should receive a full annual payment update.

oo CEO and any additional designated hospital personnel contact information, including name, e-mail address, telephone number, and mailing address (must include physical address, not just a post office box).

oo A copy of all materials that the hospital submitted in order to receive the full payment update for CY 2012. Such material would include, but may not be limited to, the applicable Notice of Participation form or completed online registration form, and quality measure data that the hospital submitted via QualityNet.

• Submit paper copies of all the medical record documentation that it submitted for the initial validation. Hospitals would submit this documentation to a designated CMS contractor which would have authority to review patient level information. We would post the address where hospitals are to ship this documentation on the QualityNet Web site. Final review of all mismatched data under a reconsideration request would be done by CMS.

• Provide a written justification for each appealed data element classified during the validation process as a mismatch. Only data elements that affect a hospital's validation score would be subject to reconsideration. We would review the data elements that were labeled as mismatched as well as the written justifications provided by the hospitals, and make a decision on the reconsideration request.

For CY 2011 reconsiderations, we required that a reconsideration request must be signed by the hospital CEO (74 FR 60654). However, we have found that this requirement increases the burden for hospitals as it hampers the electronic submission of the HOP QDRP reconsideration request form. Thus, we did not propose to include this requirement; for CY 2012 reconsiderations, reconsideration request forms would not need to be signed by the hospital's CEO.

Following receipt of a request for reconsideration, CMS would—

• Provide an e-mail acknowledgement, using the contact information provided in the reconsideration request, to the CEO and any additional designated hospital personnel notifying them that the hospital's request has been received.

• Provide a formal response to the hospital CEO and any additional designated hospital personnel, using the contact information provided in the reconsideration request, notifying the hospital of the outcome of the reconsideration process.

We intend to complete any CY 2012 reconsideration reviews and communicate the results of these determinations within 90 days following the deadline for submitting requests for reconsideration. In the CY 2010 OPPS/ASC final rule with comment period 74 FR 60654 through 60655), in response to a comment, we indicated that we would "complete any reconsideration reviews and communicate the results of these determinations within 60 to 90 days following the date we receive the request for reconsideration." In the CY 2011 OPPS/ASC proposed rule (75 FR 46382), we proposed to refine how we describe the time frame for CY 2011 from "60 to 90 days" to within "90 days" because designating a range of dates is unnecessary for this provision.

If a hospital is dissatisfied with the result of a HOP QDRP reconsideration decision, we proposed that the hospital may file an appeal under 42 CFR Part 405, Subpart R (PRRB appeal).

Similar to what we proposed and finalized for the Hospital Inpatient Quality Reporting Program, the scope of our review when a hospital requests reconsideration because it failed our validation requirement would be as follows:

• Hospital requests reconsideration for CMS contractor-abstracted data elements classified as mismatches affecting validation scores. Hospitals would be required to have timely submitted requested medical record documentation to the CMS contractor during the quarterly validation process for the requested case to be eligible to be reconsidered on the basis of mismatched data elements.

• Hospital requests reconsideration for medical records submitted during the quarterly validation process and classified as invalid record selection. Invalid record selections would be defined as medical records submitted by hospitals during the quarterly validation process that do not match the patient's episode of care information as determined by the designated re-abstracting CMS contractor. In other words, the contractor determines that the hospital returned medical documentation that is different from that which was requested. If this designated contractor determines that the hospital submitted invalid or incorrect medical documentation, it would award a zero validation score for the case. During the reconsideration process, our review of invalid record selection would initially be limited to determining whether the medical documentation submitted initially to the designated CMS contractor was for the designated episode of care. If we determine during reconsideration that the hospital did submit medical documentation corresponding to the designated episode of care, then we would abstract data elements from the medical record documentation submitted by the hospital; otherwise, the case would not be abstracted.

• Hospital requests reconsideration for medical records not submitted to the CMS contractor within the 45 calendar day deadline. Our review would initially be limited to determining whether the CMS contractor received the requested medical record documentation within 45 calendar days, and whether the hospital received the initial medical record request and reminder notice. If we determine during reconsideration that the CMS contractor did receive the paper copy of the requested, supporting medical record documentation within 45 calendar days, then we would abstract data elements from the medical record documentation submitted by the hospital. If we determine that the hospital received two letters requesting medical documentation and still did not submit the requested documentation within the 45 calendar day period, CMS would not accept this documentation as part of the reconsideration and CMS would not abstract data from this documentation.

In sum, we proposed to initially limit the scope of our reconsideration reviews involving validation to information already submitted by the hospital during the quarterly validation process, and we would not abstract submitted medical record documentation that was not submitted to the CMS contractor during the quarterly validation process.

We would expand the scope of our reconsideration reviews involving validation only if we find during the initial review that the hospital correctly and timely submitted the requested medical record documentation; only then would we abstract data elements from the medical record documentation submitted by the hospital as part of our reconsideration review.

If a hospital is dissatisfied with the result of a HOP QDRP reconsideration decision, the hospital would be able to file an appeal under 42 CFR Part 405, Subpart R (PRRB appeal).

We did not receive any public comments on our CY 2012 proposals for HOP QDRP reconsideration and appeals procedures; therefore, we are finalizing our proposals without modification.

F. Reporting of ASC Quality Data

As discussed above, section 109(b) of the MIEA–TRHCA amended section 1833(i) of the Act by redesignating clause (iv) as clause (v) and adding new clause (iv) to paragraph (2)(D) and by adding new paragraph (7). These amendments authorize the Secretary to require ASCs to submit data on quality measures and to reduce the annual payment update in a year by 2.0 percentage points for ASCs that fail to do so. However, these provisions permit, but do not require, the Secretary to take such action.

In the CY 2008 OPPS/ASC final rule with comment period (72 FR 66875), the CY 2009 OPPS/ASC final rule with comment period (73 FR 68780), and the CY 2010 OPPS/ASC final rule with comment period (74 FR 60656), we indicated that we intend to implement the provisions of section 109(b) of the MIEA–TRHCA in a future rulemaking. While promoting high quality care in the ASC setting through quality reporting is highly desirable and fully in line with our efforts under other payment systems, the transition to the revised payment system in CY 2008 posed significant challenges to ASCs, and we determined that it would be most appropriate to allow time for ASCs to gain some experience with the revised payment system before introducing other new requirements. Further, by implementing quality reporting under the OPPS prior to establishing quality reporting for ASCs, CMS would gain experience with quality measurement in the ambulatory setting in order to identify the most appropriate measures for quality reporting in ASCs prior to the introduction of the requirement for ASCs. Finally, we are sensitive to the potential burden on ASCs associated with chart abstraction and believe that adopting such measures at this time is in contrast with our desire to minimize collection burden, particularly when measures may be reported via EHRs in the future.

We continue to believe that promoting high quality care in the ASC setting through quality reporting is highly desirable and fully in line with our efforts under other payment systems. However, we continue to have the concerns outlined above for CY 2011. In the CY 2011 OPPS/ASC proposed rule (75 FR 46383), we stated that we intend to implement the provisions of section 109(b) of the MIEA–TRHCA in a future rulemaking. We invited public comment on: (1) The deferral of quality data reporting for ASCs; (2) suggestions for quality measures geared toward the services provided by ASCs; and (3) potential reporting mechanisms for ASC quality data, including electronic submission of these data. In addition, we invited public comment on the following measures under future consideration for ASC quality data reporting:

- Patient Fall in the ASC;
- Patient Burn;
- Hospital Transfer/Admission;
- Wrong Site, Side, Patient, Procedure, Implant;
- Prophylactic IV Antibiotic Timing;
- Appropriate Surgical Site Hair Removal;
- Surgical site infection (SSI);
- Medication administration variance (MAV);
- Medication reconciliation; and
- VTE measures: Outcome/assessment/prophylaxis.

In the CY 2011 OPPS/ASC proposed rule (75 FR 46383), we note that section 3006(f) of the Affordable Care Act, added by section 10301(a) of the Affordable Care Act, requires CMS to develop a plan to implement a value-based purchasing program for ASCs; this plan is due to Congress by January 1, 2011. We stated that we intend to align implementation of ASC quality reporting to be consistent with the value-based purchasing plan that will be developed and that we intend to propose implementing the provisions of section 109(b) of the MIEA–TRHCA in CY 2012 rulemaking. We invited public comment on: (1) The timing of implementing quality data reporting for ASCs; (2) suggestions for quality measures for services provided by ASCs; and (3) potential reporting mechanisms for ASC quality data, including electronic submission of these data.

Comment: Several commenters agreed with CMS' intention to defer quality data reporting for ASCs. Some commenters supported CMS's rationale for the approach, that is, enabling ASCs to gain experience with the recently launched payment system and permitting CMS to gain experience in the HOPD setting before implementing quality data reporting requirements for ASCs. Several commenters supported CMS' decision to move with caution in expanding quality data reporting to the ASC setting and appreciated CMS' sensitivity to administrative burdens faced by ASCs. Commenters stated that it would be beneficial to allow extra time in planning a quality data reporting program for ASCs in order to assess implementation challenges and identify appropriate measures.

Response: We thank the commenters for their support for delaying quality data reporting for ASCs and their agreement with our reasons for doing so.

Comment: Numerous commenters urged CMS to begin the ASC quality data reporting program as soon as possible. Many commenters indicated that the collection and reporting of quality data is a common practice for ASC facilities, as 35 States are currently collecting ASC quality data. The industry is eager to make quality data available to consumers in a manner that facilitates direct comparisons between equivalent surgical care delivered in HOPDs and ASCs. Some commenters urged CMS to implement a quality data reporting system for ASCs, out of concern that data has shown there are common occurrences of lapses in infection control in ASCs in three States. One commenter was concerned about the continued delay in a quality measurement and reporting program for the rapidly growing ASC setting and indicated that, by now, it should be technically feasible for ASCs to report on quality measures. One commenter recommended the adoption of NQF-endorsed electronic measures and limiting implementation to no more than three measures in the first reporting year. The commenter also urged CMS to keep the results of ASC quality reporting confidential for the first year.

Response: We recognize that it is beneficial for consumers to be able to compare the quality of surgical care across HOPDs and ASCs. We intend to begin this reporting program as soon as it is feasible. We thank the commenters for these suggestions. We will take them into consideration in the planning process for ASC quality measure data reporting.

Comment: One commenter stated that the use of EHRs in ASCs is still not widespread, so CMS should consider alternative reporting mechanisms such as registry-based reporting.

Response: We thank the commenter for the suggestion and we will evaluate the feasibility of alternative reporting mechanisms, such as registry-based reporting, for ASCs in conjunction with using EHR technology.

Comment: One commenter encouraged CMS to align potential ASC quality measure metrics with State and Federal legislative requirements as well as consider some inpatient measure collection process for applicability. One commenter recommended that a future ASC quality reporting program should: (1) Provide a mechanism for providers to raise concerns prior to public display of information; (2) include a provider narrative section to inform consumers of the reliability or accuracy of the information presented; and (3) include facility accreditation status, state licensure and Medicare certification.

Response: We thank the commenters for their input. We will take the comments into consideration in the planning process for ASC quality measure data reporting.

As stated previously, we invited public comment on 10 quality measures under future consideration for ASC quality data reporting (75 FR 46383). We received the following comments on these quality measures:

Comment: One commenter supported the Patient Fall measure.

Response: We thank the commenter for the support. We will consider it in the planning process for ASC quality measure data reporting.

Comment: One commenter supported the Patient Burn measure.

Response: We thank the commenter for the support. We will consider it in the planning process for ASC quality measure data reporting.

Comment: One commenter supported the Hospital Transfer/Admission measure. Another commenter stated that this measure only measures transfer/admission status which is controlled by insurance companies and not by ASCs. The commenter recommended the exclusion of this measure in ASC reporting program.

Response: We thank the commenters for the input. We will consider it in the planning process for ASC quality measure data reporting.

Comment: Two commenters supported the Prophylactic IV Antibiotic Timing measure.

Response: We thank the commenters for the support. We will consider it in the planning process for ASC quality measure data reporting.

Comment: Two commenters supported the Appropriate Surgical Site Hair Removal measure.

Response: We thank the commenters for the support. We will consider it in the planning process for ASC quality measure data reporting.

Comment: One commenter supported the Surgical Site Infection (SSI) measure. Two commenters stated the tracking of surgical complications is resource intensive and the accuracy of reporting of post-operative surgical site infections is resource-dependent. One commenter stated the measure involves many procedures and variables. The commenter recommended that CMS learn from the implementation of SSI measures in the Hospital Inpatient Quality Reporting Program, with respect to definition standardization, data collection and data validation. One commenter suggested using one single set of SSI measures to track SSI continuum across hospital inpatient, hospital outpatient and ASC settings. The commenter also indicated the review of diagnosis/services on claim data, antibiotic prescribed within 30 days of a surgical procedure, and post-surgical visits could be used for ASC pay-for-performance metrics. One commenter recommended the exclusion of this measure in ASCs.

Response: We thank the commenters for the support and suggestions. We will consider them in the planning process for ASC quality measure data reporting.

Comment: One commenter supported the VTE measures: Outcome/assessment/prophylaxis. Two commenters recommended postponing the VTE measures until there is more evidence to support the measure.

Response: We thank the commenters for the support and suggestions. We will consider them in the planning process for ASC quality measure data reporting.

Comment: Two commenters suggested the adoption of hospital measures that are applicable in the ASC settings: (1) Selection of prophylactic antibiotic; and (2) presence of physician during entire recovery period.

Response: We thank the commenters for the suggestions. We will consider them in the planning process for ASC quality measure data reporting.

Comment: Some commenters recommended additional measures and measure topics for ASCs:

- Sedation safety (rescue required, delayed recovery)
- Patient experience/satisfaction
- 6 NQF-endorsed, ASC QC-developed, facility-level measures
- Wrong Site/wrong side/wrong patient/wrong procedure/wrong implant
- Timing of the administration of intravenous antibiotics for prophylaxis of surgical site infection
- Infection control
- HAC

Response: We thank the commenters for the recommendations. We will consider them in the planning process for ASC quality measure data reporting.

Comment: Several comments supporting the implementation of a value-based purchasing program for ASCs. One commenter stated that CMS should engage all stakeholders to preview the ASC value-based purchasing report prior to its submission to Congress on January 1, 2011. One commenter recommended that CMS start ASC quality reporting in the HOP QDRP in CY 2012 to prepare for ASC value-based purchasing for ASCs.

Response: Section 3006(f) of the Affordable Care Act, added by section 10301(a) of the Affordable Care Act, requires the Secretary to develop a plan to implement a value-based purchasing program for ASCs. In developing the plan, the Secretary must consult with relevant affected parties. We are aware that, in order to implement any such plan, a quality reporting program must be initiated. We thank the commenters for their support and recommendations.

After consideration of the public comments we received, we are restating our intent to propose implementing an ASC quality measure reporting program in the CY 2012 proposed rule. We continue to believe that promoting high quality care in the ASC setting through quality data reporting is highly desirable and fully in line with our efforts under other payment systems.

G. Electronic Health Records

As we stated in the CY 2010 OPPS/ASC final rule (74 FR 60656), we are actively seeking alternatives to manual chart abstraction for the collection of quality measures for our quality data reporting programs. Among these alternatives are claims-based measure calculations, collection of data from systematic registries widely used by hospitals, and electronic submission of quality measures using EHRs. In response to the CY 2009 OPPS/ASC final rule (73 FR 68769), we received suggestions during the public comment period that we adopt measures that can be collected via EHRs. We agree with the commenters about the importance of actively working to move to a system of data collection based on submission from EHRs. In section XVI.B.5.b. of this final rule with comment period, for the CY 2014 payment determination we stated that we were considering for the future several chart-abstracted quality measures for diabetes mellitus, some of which have already been specified for EHR-based capture and submission, and

others for which EHR-based submission is planned. We have been engaged with health IT standard-setting organizations to promote the development of the necessary standards regarding data capture to facilitate data collection via EHRs, and have been collaborating with such organizations on standards for a number of quality measures. We encourage hospitals to take steps toward the adoption of EHRs that will allow for reporting of clinical quality data from the EHR directly to a CMS data repository. We also encourage hospitals that are implementing, upgrading, or developing EHR systems to ensure that such systems conform to standards adopted by HHS. We invited public comment on the future direction of EHR-based quality measurement submission.

Comment: Some commenters strongly urged CMS to adopt quality measures that have electronic specifications. Commenters supported the use of EHRs and other health information technology (IT) and encouraged CMS to collaborate with the HHS Office of the National Coordinator on Health IT (ONC) to further advance such efforts. The commenters recognized the capability and the huge benefits from such technology. Commenters commended CMS for encouraging the development and adoption of uniform data content and information technology standards across the health care industry that will support automated data collection and reporting of clinical data from EHR systems. The commenters believed that such efforts would streamline hospital data submission procedures and significantly reduce the burden for hospitals.

One commenter noted that the availability of e-measures is still limited. For instance, the commenter believes that it is difficult to find EHR systems that can easily interface with disease registries. Some commenters encouraged CMS to consider postponing the adoption of new quality measures for the HOP QDRP for CY 2012 until those measures can be collected via EHRs. The commenters noted that delaying the adoption of new measures for this reason was also warranted given the challenges hospitals will face in implementing ICD–10 coding system and complying with the Affordable Care Act.

Response: We appreciate the supportive comments we received regarding EHR-based data collection as an alternative data source for quality measures. We agree that EHR-based data submission may provide an alternative means of submitting quality data that would reduce the burden of chart abstraction for hospitals. Although we encourage hospitals to adopt EHRs, we acknowledge the challenges that must be met both by hospitals and CMS to establish the infrastructure and interoperability necessary to collect data on quality measures via EHRs. We also recognize the burden faced by hospitals in making multiple technological changes, including the ICD–10 coding system, and complying with the Affordable Care Act. We will carefully consider any additional burden that may be imposed on hospitals as a result of adopting additional measures for the HOP QDRP and will continue to consider other feasible alternatives to data collection such as registries. We will also continue to work collaboratively with health IT voluntary consensus standards organizations to ensure that quality measures can be collected in a standardized manner.

We have worked with the Healthcare Information Technology Standards Panel (HITSP), a public private partnership whose purpose was to recommend ways to harmonize health IT interoperability standards, including the specifications of data elements used in several measure sets so that they may be collected and reported via EHRs. We are currently working with the HIT Standards Committee and the HIT Policy Committee established by HITECH to continue this standardization work. Standardization of the specifications allows software to convert clinical data of different types into a form that can be analyzed for quality measurement. We encourage collaboration among standard-setting organizations and measure developers, on the creation of standards for electronic collection of data elements for other quality measures as well, particularly those used in our quality data reporting programs.

Comment: One commenter did not support a policy that would allow CMS to have access to clinical information via an EHR for purposes of quality measure reporting because it believed that CMS would be invading the privacy of patients.

Response: We will take these concerns into consideration when developing a system to collect information from EHRs in the future.

Comment: Some commenters recommended that CMS harmonize the HOP QDRP quality measures with the meaningful use objectives under the HITECH EHR Incentive Program, as well as with other quality programs that have been authorized under the Affordable Care Act. Commenters also suggested that CMS test, adopt, and validate EHR specifications. Commenters recommended that CMS initially adopt for EHR data collection under the HOP QDRP quality measures that apply to the Emergency Department and delay adopting measures that apply to the broader outpatient setting until both hospital and CMS' technical capabilities mature. Commenters were strongly opposed to a policy under which providers would be required to submit data on the same measure multiple times under different reporting programs, but instead supported a policy under which providers could report data on a measure one time for use in multiple reporting programs.

Response: One of our important objectives is to align the quality measures used in the various existing quality data reporting programs, and to align these measures with the measures we are developing for use in new programs authorized under the Affordable Care Act. However, when considering whether particular measures can be aligned, we must take into account the needs and requirements of the various individual quality reporting programs.

We thank the commenters and will take these comments into consideration as we consider the future direction of EHR-based quality measure submission with respect to the HOP QDRP.

XVII. Files Available to the Public Via the Internet

A. Information in Addenda Related to the CY 2011 Hospital OPPS

Addenda A and B to this final rule with comment period provide various data pertaining to the CY 2011 payment for items and services under the OPPS. Addendum A, which includes a list of all APCs payable under the OPPS, and Addendum B, which includes a list of all active HCPCS codes with their CY 2011 OPPS payment status and comment indicators, are available to the public by clicking "Hospital Outpatient Regulations and Notices" on the CMS Web site at: *http://www.cms.gov/HospitalOutpatientPPS/.*

For the convenience of the public, we also are including on the CMS Web site a table that displays the HCPCS code data in Addendum B sorted by APC assignment, identified as Addendum C.

Addendum D1 defines the payment status indicators that are used in Addenda A and B. Addendum D2 defines the comment indicators that are used in Addendum B. Addendum E lists the HCPCS codes that are only payable to hospitals as inpatient procedures and are not payable under the OPPS. Addendum L contains the out-migration wage adjustment for CY 2011.

Addendum M lists the HCPCS codes that are members of a composite APC and identifies the composite APC to which each is assigned. This addendum also identifies the status indicator for the HCPCS code and a comment indicator if there is a change in the code's status with regard to its membership in the composite APC. Each of the HCPCS codes included in Addendum M has a single procedure payment APC, listed in Addendum B, to which it is assigned when the criteria for assignment to the composite APC are not met. When the criteria for payment of the code through the composite APC are met, one unit of the composite APC payment is paid, thereby providing packaged payment for all services that are assigned to the composite APC according to the specific I/OCE logic that applies to the APC. We refer readers to the discussion of composite APCs in section II.A.2.e. of this final rule with comment period for a complete description of the composite APCs.

These addenda and other supporting OPPS data files are available on the CMS Web site at: *http://www.cms.gov/HospitalOutpatientPPS/.*

B. Information in Addenda Related to the CY 2011 ASC Payment System

Addenda AA and BB to this final rule with comment period provide various data pertaining to the CY 2011 payment for the covered surgical procedures and covered ancillary services for which ASCs may receive separate payment. Addendum AA lists, for CY 2011, the ASC covered surgical procedures, whether the procedure is subject to multiple procedure discounting, the comment and payment indicators for each procedure, and the payment weights and rates for each procedure. Addendum BB displays, for CY 2011, the ASC covered ancillary services, the comment and payment indicators for each service and the payment weights and rates for each service. All ASC relative payment weights and payment rates for CY 2011 are a result of applying the revised ASC payment system methodology established in the final rule for the revised ASC payment system published in the **Federal Register** on August 2, 2007 (72 FR 42470 through 42548) to the CY 2011 OPPS and MPFS ratesetting information.

Addendum DD1 defines the payment indicators that are used in Addenda AA and BB. Addendum DD2 defines the comment indicators that are used in Addenda AA and BB.

Addendum EE (available only on the CMS Web site) lists the surgical procedures that are excluded from Medicare payment if furnished in ASCs. The excluded procedures listed in Addendum EE are surgical procedures that are assigned to the OPPS inpatient list, are not covered by Medicare, are reported using a CPT unlisted code, or have been determined to pose a significant safety risk to a Medicare beneficiary when performed in an ASC or for which standard medical practice dictates that the beneficiary typically requires active medical monitoring and care at midnight following the procedure.

These addenda and other supporting ASC data files are included on the CMS Web site at: *http://www.cms.gov/ASCPayment/.* The MPFS data files are located at: *http://www.cms.gov/PhysicianFeeSched/.*

The links to all of the FY 2011 IPPS wage index-related tables (that are used for the CY 2011 OPPS) that were published in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50450 through 50456) are accessible on the CMS Web site at: *http://www.cms.gov/AcuteInpatientPPS/WIFN.*

XVIII. Collection of Information Requirements

A. Legislative Requirement for Solicitation of Comments

Under the Paperwork Reduction Act of 1995, we are required to provide 60-day notice in the **Federal Register** and to solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. In order to fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

In the CY 2011 OPPS/ASC proposed rule (75 FR 46436 through 46440), we solicited public comments on each of the issues outlined above as discussed below that contained information collection requirements. We address any public comments that we received on these information collection requirements below.

B. Associated Information Collections Not Specified in Regulatory Text

In the CY 2011 OPPS/ASC proposed rule, we made reference to proposed associated information collection requirements that were not discussed in the regulation text contained in this document. The following is a discussion of those requirements.

1. Hospital Outpatient Quality Data Reporting Program (HOP QDRP)

As previously stated in section XVI. of the proposed rule and this final rule with comment period, the quality data reporting program for hospital outpatient care, known as the Hospital Outpatient Quality Data Reporting Program (HOP QDRP), has been generally modeled after the quality data reporting program for hospital inpatient services, the Hospital Inpatient Quality Reporting Program. Section 109(a) of the MIEA–TRHCA (Pub. L. 109–432) amended section 1833(t) of the Act by adding a new subsection (17) which affects the annual payment update factor applicable to OPPS payments for services furnished by hospitals in outpatient settings on or after January 1, 2009. Section 1833(t)(17)(A) of the Act states that subsection (d) hospitals (as defined under section 1886(d)(1)(B) of the Act) that fail to report data required for the quality measures selected by the Secretary in the form and manner required by the Secretary under section 1833(t)(17)(B) of the Act will incur a 2.0 percentage point reduction to their annual payment update factor. Section 1833(t)(17)(B) of the Act requires that hospitals submit quality data in a form and manner, and at a time, that the Secretary specifies. Section 1833(t)(17)(A)(ii) of the Act specifies that any reduction would apply only to the payment year involved and would not be taken into account in computing the applicable annual payment update factor for a subsequent payment year. Section 1833(t)(17)(C)(i) of the Act requires the Secretary to develop measures appropriate for the measurement of the quality of care (including medication errors) furnished by hospitals in outpatient settings, that these measures reflect consensus among affected parties and, to the extent feasible and practicable, that these measures include measures set forth by one or more national consensus building entities.

We did not receive any public comments on these information collection requirements.

2. HOP QDRP Quality Measures for the CY 2012, CY 2013 and CY 2014 Payment Determinations

In the CY 2009 OPPS/ASC final rule with comment period (73 FR 68766), we retained the 7 chart-abstracted quality measures we used in CY 2009 and adopted 4 new claims-based imaging measures for the CY 2010 payment determination, bringing the total number of quality measures for which hospitals must submit data to 11 measures. In the CY 2010 OPPS/ASC final rule with comment period (74 FR 60637), we required hospitals to continue to submit data on the same 11 measures for the CY 2011 payment determination. The burden associated with the aforementioned data submission requirements is currently approved under OCN: 0938–1109 and expires October 31, 2013.

We are finalizing our proposal to retain for the CY 2012 payment determination the 7 chart-abstracted quality measures and the 4 claims-based imaging measures we used for the CY 2011 payment determinations. For the CY 2012 payment determination, we are also adopting 1 structural HIT measure that tracks HOPDs' capacity to receive laboratory results electronically, and 3 claims-based imaging efficiency measures, bringing the total number of quality measures for which hospitals must submit data to 15 measures. We will calculate the claims-based measures using Medicare FFS claims data and do not require additional hospital data submissions, and we are using the same data submission requirements related to the seven data abstracted measures that we used for the CY 2011 payment determination. For the structural measure, hospitals will enter data into a Web-based collection tool during a specified collection period once annually.

For the CY 2013 payment update, we are requiring that hospitals continue to submit data for all of the quality measures that we adopted for the CY 2012 payment determination. We are also adopting 1 structural HIT measure assessing the ability to track clinical results between visits, 6 new chart-abstracted measures on the topics of HOPD care transitions and ED efficiency, as well as 1 chart-abstracted ED–AMI measure that was proposed for the CY 2012 payment determination but which we decided to finalize for the CY 2013 payment determination, bringing the total number of quality measures for which hospitals must submit data to 23 measures. We are requiring hospitals to submit data related to the 14 chart-abstracted measures. We will calculate the 7 claims-based measures using Medicare FFS claims data and do not require additional hospital data submission for these measures. For the 2 structural measures, hospitals will enter data into a Web-based collection tool during a specified collection period once annually.

For the CY 2014 payment determination, we are not adopting any new measures at this time. These measures that, as of now, will be used for the CY 2012 through CY 2014 payment determinations are listed in the table below.

HOP QDRP MEASUREMENT SET TO BE USED FOR THE CY 2012, CY 2013, AND CY 2014 PAYMENT DETERMINATIONS

OP–1: Median Time to Fibrinolysis
OP–2: Fibrinolytic Therapy Received Within 30 Minutes
OP–3: Median Time to Transfer to Another Facility for Acute Coronary Intervention
OP–4: Aspirin at Arrival
OP–5: Median Time to ECG
OP–6: Timing of Antibiotic Prophylaxis
OP–7: Prophylactic Antibiotic Selection for Surgical Patients
OP–8: MRI Lumbar Spine for Low Back Pain
OP–9: Mammography Follow-up Rates
OP–10: Abdomen CT—Use of Contrast Material
OP–11: Thorax CT—Use of Contrast Material
OP–12: The Ability for Providers with HIT to Receive Laboratory Data Electronically Directly into their Qualified/Certified EHR System as Discrete Searchable Data *
OP–13: Cardiac Imaging for Preoperative Risk Assessment for Non Cardiac Low Risk Surgery *
OP–14: Simultaneous Use of Brain Computed Tomography (CT) and Sinus Computed Tomography (CT) *
OP–15: Use of Brain Computed Tomography (CT) in the Emergency Department for Atraumatic Headache *
OP–16: Troponin Results for Emergency Department acute myocardial infarction (AMI) patients or chest pain patients (with *Probable Cardiac Chest Pain*) Received Within 60 minutes of Arrival **
OP–17: Tracking Clinical Results between Visits **
OP–18: Median Time from ED Arrival to ED Departure for Discharged ED Patients **
OP–19: Transition Record with Specified Elements Received by Discharged Patients **
OP–20: Door to Diagnostic Evaluation by a Qualified Medical Professional **
OP–21: ED-Median Time to Pain Management for Long Bone Fracture **
OP–22: ED-Patient Left Before Being Seen **
OP–23: ED-Head CT Scan Results for Acute Ischemic Stroke or Hemorrhagic Stroke who Received Head CT Scan Interpretation Within 45 minutes of Arrival **

* New measure for CY 2012 payment determination.
** New measure for CY 2013 payment determination.

As part of the data submission process pertaining to the quality measures we are finalizing for the CY 2012 payment determination, hospitals must complete and submit a notice of participation form for the HOP QDRP. By submitting this document, hospitals agree that they will allow CMS to publicly report the quality measures as required by the HOP QDRP.

For the CY 2012 payment determination, the burden associated with this requirement is the time and effort associated with completing the notice of participation form as well as collecting and submitting the data on the required quality measures. We estimate that there will be approximately 3,200 respondents per year. For hospitals to collect and submit the information on the required measures, we estimate it will take 35 minutes per sampled case. We estimate there will be a total of 930,000 cases per year, approximately 290 cases per year per respondent. The estimated annual burden associated with the

aforementioned submission requirements for the chart-abstracted data is 542,500 hours (930,000 cases per year × 0.583 hours/case). For the structural measure, we estimate that each participating hospital will spend 10 minutes per year to collect and submit the required data, making the estimated annual burden associated with this measure 533 hours (3,200 hospitals × 0.167 hours per hospital).

For the CY 2013 payment determination, the burden associated with this requirement is the time and effort associated with completing the notice of participation form as well as collecting and submitting the data on the required quality measures. We estimate that there will be approximately 3,200 respondents per year. For hospitals to collect and submit the information on the required measures, we estimate it will take 35 minutes per sampled case. We estimate there will be a total of 1,860,000 cases per year, approximately 580 cases per year per respondent. The estimated annual burden associated with the aforementioned submission requirements for the chart-abstracted data is 1,084,380 hours (1,860,000 cases per year × 0.583 hours/case). For the structural measures, we estimate that each participating hospital will spend 20 minutes per year to collect and submit the required data, making the estimated annual burden associated with this measure 1,066 hours (3,200 hospitals × 0.334 hours per hospital).

In the proposed rule, we invited public comment on the burden associated with these information collection requirements. We did not receive any public comments on these information collection requirements.

3. HOP QDRP Validation Requirements

In addition to finalizing requirements related to the submission of quality data, in this final rule with comment period we are finalizing requirements related to data validation for CY 2012. Similar to our proposed and final policy for the FY 2012 Hospital Inpatient Quality Reporting Program (75 FR 23991 through 23993 and 50225 through 50227), we will validate data from 800 randomly selected hospitals each year under the HOP QDRP, beginning with the CY 2012 payment determination. We note that, because the 800 hospitals would be selected randomly, every HOP QDRP-participating hospital would be eligible each year for validation selection. For each selected hospital, we would randomly select up to 48 patient episodes of care per year (12 per quarter) for validation purposes from the total number of cases that the hospital successfully submitted to the OPPS Clinical Warehouse during the applicable time period. However, if a selected hospital submitted less than 12 cases in one or more quarters, only those cases available would be validated.

The burden associated with the CY 2012 requirement is the time and effort necessary to submit validation data to a CMS contractor. We estimate that it will take each of the 800 sampled hospitals approximately 12 hours to comply with these data submission requirements. To comply with the requirements, we estimate each hospital must submit 48 cases for the affected year for review. We are requiring that 800 hospitals comply with these requirements per year, which will result in a total of 38,400 charts being submitted by the sampled hospitals. The estimated annual burden associated with the data validation process for CY 2012 and subsequent years is 9,600 hours. While these requirements are subject to the PRA, they are currently approved under OCN: 0938–1109 and expire October 31, 2013.

In the proposed rule, we invited public comment on the burden associated with these information collection requirements.

Comment: One commenter stated that the proposed validation requirements are reasonable and would be acceptable to providers if they were the only Federal data submission requirements. The commenter stated its concern that the record requests for validation would supplement those already established as part of Federal integrity audit processes (for example, RAC, Medicaid Integrity, ZPIC, and MAC) and facilities would receive multiple requests from each contracted entity, significantly increasing a hospital provider's labor investment and costs. The commenter urged CMS to review the validation process with respect to other data requirements rather than seeing it as a single request, and to consider the operational impact that receiving multiple audit entity requests will have on any single provider.

Response: We understand the commenter's concern regarding multiple Federal medical record requests. For HOP QDRP validation, we have worked to limit overall burden by reducing the number of hospitals participating annually in validation through our random sampling of hospitals. In addition, hospitals will be reimbursed for photocopying and mailing costs as they are under the Hospital Inpatient Quality Reporting Program, thus reducing the burden in submitting medical record documentation for HOP QDRP validation purposes. We agree that efforts should be made to keep record requests for validation purposes at the minimum necessary to ensure the accuracy of submitted data and will consider ways to do so in future rulemaking.

4. HOP QDRP Reconsideration and Appeals Procedures

In the CY 2009 OPPS/ASC final rule with comment period (73 FR 68779), we adopted a mandatory reconsideration process that applied to the CY 2010 payment decisions. In the CY 2010 OPPS/ASC final rule with comment period (74 FR 60654 through 60655), we continued this process for the CY 2011 payment update. In the CY 2011 OPPS/ASC proposed rule (75 FR 46381 through 46382), we proposed to continue this process for the CY 2012 payment update with some modifications. We proposed to eliminate a requirement that the reconsideration request form be signed by the hospital CEO to facilitate electronic submission of the form and reduce hospital burden. Under this proposed process, the hospitals would be required to meet all of the requirements specified in section XVI.E. of the CY 2011 OPPS/ASC proposed rule. We are finalizing this proposal in this final rule with comment period. While there is burden associated with filing a reconsideration request, section 5 CFR 1320.4 of the Paperwork Reduction Act of 1995 regulations excludes collection activities during the conduct of administrative actions such as re-determinations, reconsiderations, and/or appeals.

We did not receive any public comments on these information collection requirements.

5. Additional Topics

In addition to seeking OMB approval for the information collection requirements associated with the HOP QDRP and the data validation processes, we sought public comment on several issues that may ultimately affect the burden associated with the HOP QDRP and associated data validation processes. Specifically, in the proposed rule we proposed to adopt quality measures for the CY 2012 through CY 2014 payment determinations, as well as sought comments on other possible quality measures under consideration for adoption into the HOP QDRP. We also solicited public comments on the use of registries to comply with the HOP QDRP submission requirements, the use of EHRs as a data submission tool, the use of a standardized process for the retirement of HOP QDRP quality

measures, the continued use of an extraordinary circumstance extension or waiver for reporting quality data, and additional data validation conditions that we are considering adopting beginning with the CY 2013 payment determination.

Comments and responses for the issues of registries, EHRs, quality measure retirements, the continued use of an extraordinary circumstance extension or waiver for reporting quality data, and additional data validation conditions are addressed in section XVI. of this final rule with comment period.

XIX. Response to Comments

Because of the large number of public comments we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the **DATES** section of this final rule with comment period, and, when we proceed with a subsequent document(s), we will respond to those comments in the preamble to that document(s).

XX. Regulatory Impact Analysis

A. Overall Impact

We have examined the impacts of this final rule with comment period as required by Executive Order 12866 (September 1993, Regulatory Planning and Review), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4), Executive Order 13132 on Federalism, and the Congressional Review Act (5 U.S.C. 804(2)).

1. Executive Order 12866

Executive Order 12866 directs agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). A regulatory impact analysis (RIA) must be prepared for major rules that have economically significant effects ($100 million or more in any 1 year) or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal government or communities (58 FR 51741).

We estimate that the effects of the OPPS provisions that will be implemented by this final rule with comment period will result in expenditures exceeding $100 million in any 1 year. We estimate the total increase (from changes in this final rule with comment period as well as enrollment, utilization, and case-mix changes) in expenditures under the OPPS for CY 2011 compared to CY 2010 to be approximately $3.2 billion. Because this final rule with comment period for the OPPS is "economically significant" as measured by the $100 million threshold and also a major rule under the Congressional Review Act, we have prepared a regulatory impact analysis that, to the best of our ability, presents the costs and benefits of this rulemaking. Table 66 of this final rule with comment period displays the redistributional impact of the CY 2011 changes on OPPS payment to various groups of hospitals.

We estimate that the effects of the ASC provisions that will be implemented by this final rule with comment period for the ASC payment system will result in expenditures exceeding $100 million in any one year. We estimate the total increase (from changes in this final rule with comment period as well as enrollment, utilization, and case-mix changes) in expenditures under the ASC payment system for CY 2011 compared to CY 2010 to be approximately $230 million. Because this final rule with comment period for the ASC payment system is "economically significant" as measured by the $100 million threshold and also a major rule under the Congressional Review Act, we have prepared a regulatory impact analysis of changes to the ASC payment system that, to the best of our ability, presents the costs and benefits of this rulemaking. Table 68 and Table 69 of this final rule with comment period display the redistributional impact of the CY 2011 changes on ASC payment, grouped by specialty area and then grouped by procedures with the greatest ASC expenditures, respectively.

2. Regulatory Flexibility Act (RFA)

The RFA requires agencies to analyze options for regulatory relief of small businesses if a rule has a significant impact on a substantial number of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. Many hospitals, other providers, ASCs, and other suppliers are considered to be small entities, either by being nonprofit organizations or by meeting the Small Business Administration (SBA) definition of a small business (hospitals having revenues of $34.5 million or less in any 1 year and ASCs having revenues of $10 million or less in any 1 year). (For details on the latest standards for health care providers, we refer readers the SBA's Web site at: *http://sba.gov/idc/groups/public/documents/sba_homepage/serv_sstd_tablepdf.pdf* (refer to the 620000 series).)

For purposes of the RFA, we have determined that many hospitals and most ASCs will be considered small entities according to the SBA size standards. Individuals and States are not included in the definition of a small entity. Therefore, the Secretary has determined that this final rule with comment period will have a significant impact on a substantial number of small entities. Because we acknowledge that many of the affected entities are small entities, the analyses presented throughout this final rule with comment period constitute our regulatory flexibility analysis. Therefore, in the CY 2011 OPPS/ASC proposed rule (75 FR 46441), we solicited public comments on our estimates and analyses of the impact of the proposed rule on those small entities.

3. Small Rural Hospitals

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 603 of the RFA. With the exception of hospitals located in certain New England counties, for purposes of section 1102(b) of the Act, we now define a small rural hospital as a hospital that is located outside an urban area and has fewer than 100 beds. Section 601(g) of the Social Security Amendments of 1983 (Pub. L. 98–21) designated hospitals in certain New England counties as belonging to the adjacent urban areas. Thus, for OPPS purposes, we continue to classify these hospitals as urban hospitals. We believe that the changes to the OPPS in this final rule with comment period will affect both a substantial number of rural hospitals as well as other classes of hospitals and that the effects on some may be significant. Also, the changes to the ASC payment system in this final rule with comment period will affect rural ASCs. Therefore, the Secretary has determined that this final rule with comment period will have a significant impact on the operations of a substantial number of small rural hospitals.

4. Unfunded Mandates

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA)

also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. That threshold level is currently approximately $135 million. This final rule with comment period will not mandate any requirements for State, local, or tribal governments, nor will it affect private sector costs.

5. Federalism

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct costs on State and local governments, preempts State law, or otherwise has Federalism implications.

We have examined the OPPS and ASC provisions included in this final rule with comment period in accordance with Executive Order 13132, Federalism, and have determined that they will not have a substantial direct effect on State, local or tribal governments, preempt State law, or otherwise have a Federalism implication. As reflected in Table 66 below, we estimate that OPPS payments to governmental hospitals (including State and local governmental hospitals) will increase by 2.9 percent under this final rule with comment period. While we do not know the number of ASCs with government ownership, we anticipate that it is small. We believe that the provisions related to payments to ASCs in CY 2011 will not affect payments to any ASCs owned by government entities.

The following analysis, in conjunction with the remainder of this document, demonstrates that this final rule with comment period is consistent with the regulatory philosophy and principles identified in Executive Order 12866, the RFA, and section 1102(b) of the Act.

This final rule with comment period will affect payments to a substantial number of small rural hospitals and a small number of rural ASCs, as well as other classes of hospitals and ASCs, and some effects may be significant.

B. Effects of OPPS Changes in This Final Rule With Comment Period

We are making several changes to the OPPS that are required by the statute. We are required under section 1833(t)(3)(C)(ii) of the Act to update annually the conversion factor used to determine the APC payment rates. We also are required under section 1833(t)(9)(A) of the Act to revise, not less often than annually, the wage index and other adjustments, including pass-through payments and outlier payments. In addition, we must review the clinical integrity of payment groups and weights at least annually. Accordingly, in this final rule with comment period, we are updating the conversion factor and the wage index adjustment for hospital outpatient services furnished beginning January 1, 2011, as we discuss in sections II.B. and II.C., respectively, of this final rule with comment period. We discuss our implementation of section 10324 of the Affordable Care Act, as amended by HCERA, authorizing a wage index of 1.00 for certain frontier states. We also are revising the relative APC payment weights using claims data for services furnished from January 1, 2009, through December 31, 2009, and updated cost report information. We are continuing the current payment adjustment for rural SCHs, including EACHs. Finally, we list the 18 drugs and biologicals in Table 27 of this final rule with comment period that we are removing from pass-through payment status for CY 2011.

Under this final rule with comment period, we estimate that the update change to the conversion factor and other adjustments (but not including the effects of outlier payments, pass through estimates, the expiration of section 508 wages on September 30, 2010, and the application of the frontier wage adjustment for CY 2011) as provided by the statute, will increase total OPPS payments by 2.3 percent in CY 2011. The changes to the APC weights, the changes to the wage indices, and the continuation of a payment adjustment for rural SCHs, including EACHs, will not increase OPPS payments because these changes to the OPPS are budget neutral. However, these updates do change the distribution of payments within the budget neutral system as shown in Table 66 below and described in more detail in this section. We also estimate that the total change in payments between CY 2010 and CY 2011, considering all payments, including changes in estimated total outlier payments, pass through payments, the expiration of additional money for specified section 508 reclassification and special exception wages indices, and the application of the frontier adjustment outside of budget neutrality, in addition to the application of the hospital market basket will increase total OPPS payments by 2.5 percent.

1. Alternatives Considered

Alternatives to the changes we are making and the reasons that we have chosen the options are discussed throughout this final rule with comment period. Some of the major issues discussed in this final rule with comment period and the options considered are discussed below.

a. Alternatives Considered for the Extension of Waiver of Deductible to Services Furnished in Connection With or in Relation to a Colorectal Screening Test That Becomes Diagnostic

Section 4104(c)(2) of the Affordable Care Act waives the deductible with respect to a colorectal cancer screening test regardless of the code that is billed for the establishment of a diagnosis as a result of the test, or for the removal of tissue or other matter or other procedure that is furnished in connection with, as a result of, and in the same clinical encounter as a screening test. We are finalizing our proposal for CY 2011 that the deductible be waived for all surgical services furnished on the same date as a planned screening colonoscopy, planned flexible sigmoidoscopy, or barium enema as being furnished in connection with, as a result of, and in the same clinical encounter as the screening test. As discussed in detail in XII.B.3. of this final rule with comment period, we are implementing this provision by creating a HCPCS modifier that hospitals will append to the diagnostic procedure code that is reported instead of the screening colonoscopy or screening flexible sigmoidoscopy HCPCS code or as a result of the barium enema when the screening test becomes a diagnostic service. The claims processing system will respond to the modifier by waiving the deductible for all surgical services on the same date as the diagnostic test. Coinsurance or copayment will continue to apply to the diagnostic test and other services furnished in connection with, as a result of, and in the same clinical encounter as the screening test.

We considered three alternatives for the extension of wavier of deductible to services furnished in connection with or in relation to a colorectal screening test that becomes diagnostic for CY 2011. The first alternative we considered was to define a limited set of colonoscopy codes to which the waiver could apply when performed on the same date as a procedure that began as a screening colonoscopy, screening flexible sigmoidoscopy, or barium enema. We did not choose this alternative because it is virtually impossible to create a valid and complete list of appropriate procedures to handle all situations, due to the range of problems that could be identified and complications that could occur with any invasive procedures.

Furthermore, we believe this alternative would be complex to implement. Although this alternative narrows the potential for hospitals to abuse the waiver of the deductible by applying it to unrelated services, we believe the potential for abuse of the waiver of the deductible to be minimal. The Part B deductible is a fixed amount that the beneficiary pays before Medicare begins to pay and typically will be met after receiving one to two services.

The second alternative we considered was to define a broader, but still limited set of codes (for example, selected surgical services) to which the waiver would apply when performed on the same date as a procedure that began as a screening colonoscopy, screening flexible sigmoidoscopy, or barium enema. Although this alternative would encompass a broader set of codes, we believe it is virtually impossible to create a valid and complete list of appropriate procedures to handle all situations, due to the range of problems that could be identified and complications that could occur with any invasive procedures. While we acknowledge that this alternative would narrow the potential for abuse of the waiver of the deductible, we believe the potential for abuse is minimal and that this alternative also would be complex to implement. For these reasons we did not choose to define a broader set of limited codes to which the waiver could apply when performed on the same date as a procedure that began as a screening colonoscopy, screening flexible sigmoidoscopy, or barium enema.

The third alternative we considered, and the one we are adopting for CY 2011, is to apply the waiver to any surgical procedure that is reported with the same date as a screening colonoscopy, flexible sigmoidoscopy, or barium enema and that providers report is "in connection with or as a result of" the procedure that began as a screening test. As we discuss in detail in section XII.B.3. of this final rule with comment period, we have created HCPCS modifier "PT" that providers will append to the diagnostic procedure code that is reported instead of the screening colonoscopy or screening flexible sigmoidoscopy HCPCS code or as a result of the barium enema when the screening test becomes a diagnostic service. We chose this alternative because we believe it provides the greatest ease of public understanding and provider application. We believe that this alternative is appropriate because we believe that it will be very rare for an unrelated surgery to occur on the same date as one of these scheduled screening tests. Moreover, we believe that the risk of improper expenditures will be very small under this policy because it is the deductible, and not the coinsurance, that is waived for the related procedures other than the screening tests. As noted above, the Part B deductible is a fixed amount that the beneficiary pays before Medicare begins to pay and typically will be met after receiving one to two services.

b. Alternatives Considered for Payment of the Acquisition and Pharmacy Overhead Costs of Drugs and Biologicals That Do Not Have Pass-Through Status

We are finalizing our proposal that, for CY 2011, the OPPS will make payment for separately payable drugs and biologicals under the methodology that we proposed, which, for CY 2011, results in payment for separately paid drugs and biologicals at ASP+5 percent. This payment will continue to represent combined payment for both the acquisition and pharmacy overhead costs of separately payable drugs and biologicals. As discussed in detail in section V.B.3. of this final rule with comment period, we believe that approximately $150 million of the estimated $457 million in pharmacy overhead cost currently attributed to coded packaged drugs with an ASP and $50 million of the overhead cost currently attributed to uncoded packaged drugs without an ASP should, instead, be attributed to separately payable drugs and biologicals to provide an adjustment for the pharmacy overhead costs of these separately payable products. As a result, we also are reducing the cost of packaged drugs and biologicals that is included in the payment for procedural APCs to offset the $200 million adjustment to payment for separately payable drugs and biologicals. We are finalizing our proposal that any redistribution of pharmacy overhead cost that may arise from CY 2011 final rule claims data will occur only from some drugs and biologicals to other drugs and biologicals, thereby maintaining the estimated total cost of drugs and biologicals under the OPPS.

We considered three alternatives for payment of the acquisition and pharmacy overhead costs of drugs and biologicals that do not have pass-through status for CY 2011. The first alternative we considered was to continue our standard policy of comparing the estimated aggregate cost of separately payable drugs and biologicals in our claims data to the estimated aggregate ASP dollars for separately payable drugs and biologicals, using the ASP as a proxy for average acquisition cost, to calculate the estimated percent of ASP that will serve as the best proxy for the combined acquisition and pharmacy overhead costs of separately payable drugs and biologicals (70 FR 68642). Under this standard methodology, using July 2010 ASP information and costs derived from CY 2009 OPPS final rule claims data, we estimated the combined acquisition and overhead costs of separately payable drugs and biologicals to be ASP minus 1 percent. As discussed in section V.B.3. of this final rule with comment period, we also determined that the combined acquisition and overhead costs of packaged drugs are 296 percent of ASP. We did not choose this alternative because we believe that this analysis indicates that our standard drug payment methodology has the potential to "compress" the calculated costs of separately payable drugs and biologicals to some degree. Further, we recognize that the attribution of pharmacy overhead costs to packaged or separately payable drugs and biologicals through our standard drug payment methodology of a combined payment for acquisition and pharmacy overhead costs depends, in part, on the treatment of all drugs and biologicals each year under our annual drug packaging threshold. Changes to the packaging threshold may result in changes to payment for the overhead cost of drugs and biologicals that do not reflect actual changes in hospital pharmacy overhead cost for those products.

The second alternative we considered was to adopt the APC Panel's February 2010 recommendation to redistribute a larger portion of the overhead cost from packaged drugs to separately payable drugs for payment of drugs and biologicals that do not have pass-through status. We did not choose this alternative because, as we discussed in V.B.3. of this final rule with comment period, we are not confident that we know the amount of overhead cost available for redistribution in the uncoded packaged drugs and, therefore, do not know if it is appropriate to redistribute more payment from uncoded packaged drugs to separately paid drugs. Presenters at the February 2010 APC Panel meeting provided analyses suggesting that the uncoded packaged drug cost contain exactly the same drugs as those in the coded packaged drug cost, leading to a recommendation that we could assume the same proportional amount of overhead cost appears in the uncoded packaged drug cost as observed in the coded packaged drug cost in order to increase the amount of "overhead" drug

cost available for redistribution from uncoded packaged drugs to separately payable drugs. Public comments on the proposed rule make comparable comments, and presenters at the August 2010 APC Panel meeting reiterated their recommended assumption of comparable overhead amounts. However, we do not believe we should assume that the costs reported under uncoded pharmacy revenue code lines are for the same drugs and biologicals, with the same ASPs, and overhead costs as the costs of packaged drugs and biologicals reported with a HCPCS code. For these reasons, we are not accepting the APC Panel's recommendation to redistribute a larger portion of overhead costs from packaged drugs to separately payable drugs for CY 2011.

The third alternative we considered and the one we selected for CY 2011 is to continue our CY 2010 redistribution methodology and redistribute $200 million in overhead costs from packaged coded and uncoded drugs to separately payable drugs which will result in a payment for non-pass-through separately payable drugs and biologicals at ASP+5 percent, which will continue to represent a combined payment for both the acquisition costs of separately payable drugs and the pharmacy overhead costs applicable to these products. We also are reducing the cost of packaged drugs that is included in the payment for procedural APCs to offset the $200 million adjustment to payment for separately payable drugs and biologicals, resulting in payment for packaged drugs and biologicals of ASP+198 percent. We chose this alternative because we believe that it provides the most appropriate redistribution of pharmacy overhead costs associated with drugs and biologicals, based on the analyses discussed in section V.B.3. of this final rule with comment period, and is the alternative that is most consistent with the principles of a prospective payment system.

c. Alternatives Considered for the Physician Supervision of Hospital Outpatient Services

Our proposed revision to our requirement for direct supervision of therapeutic services provided to hospital and CAH outpatients attempted to address industry concerns brought to our attention since we issued our CY 2010 final rule with comment period. The primary issue raised by CAHs, rural hospitals and other small hospitals following CY 2010 rulemaking was difficulty in staffing their facilities to meet our requirement for direct supervision of all outpatient therapeutic services, but especially services that involve a significant amount of monitoring by auxiliary staff, that may extend past regular business hours, and that typically are lower clinical complexity and risk. Our proposal to establish a limited set of "non-surgical extended duration therapeutic services" (extended duration services) was designed to address these issues. For these services, we proposed to require only a minimum of direct supervision during an initial period, followed by general supervision for the remainder of the service. Public commenters appreciated our attempt to offer flexibility through our proposal for non-surgical extended duration services, but made several additional requests. First, they note that direct supervision should require the supervising physician or nonphysician practitioner be available, but not specify a physical location. Commenters also requested that CMS adopt general supervision for all therapeutic services. They noted that there are other types of outpatient services that they believe qualify for general supervision, and they made extensive requests for an independent assessment of the clinically appropriate supervision level for any given outpatient service. In order to address these concerns while maintaining an adequate level of safety and quality of care, we are finalizing a supervision policy with the following four components:

1. We are maintaining our default requirement for direct supervision of all outpatient therapeutic services. However, we are revising our definition of direct supervision of both outpatient therapeutic and diagnostic services (except for diagnostic services provided under arrangement in non-hospital locations) to require only "immediate availability," meaning physically immediately available, without specifying a particular physical boundary.

2. Through rulemaking for CY 2012, we will develop a process to consider industry requests for alternative service-specific supervision levels that will include an independent technical advisory committee, potentially the APC Panel.

3. In the interim, we are extending for one year (through CY 2011) our notice of non-enforcement of the current policy for direct supervision of all outpatient therapeutic services furnished in CAHs (*http://www.cms.gov/HospitalOutpatientPPS/Downloads/WebNotice.pdf*). Because CAHs and small rural hospitals paid under the OPPS face comparable staffing challenges, we are extending this provision to hospitals geographically located in a rural area or designated to be located in a rural area for their wage index that have 100 or fewer beds.

4. Finally, for CY 2011, we are finalizing our proposal to establish a limited set of nonsurgical extended duration services for which we would allow direct supervision during the initiation of the service followed by general supervision for the remainder of service at the discretion of the supervising physician or nonphysician practitioner. The list of nonsurgical extended duration therapeutic services subject to this policy for CY 2011 appears in Table 48A of this final rule with comment period.

We considered two alternatives that we believed may have increased flexibility while sustaining our payment requirement for direct supervision of therapeutic hospital outpatient services provided incident to physicians' services. First, we considered offering hospitals the flexibility of broadening the list of extended duration services to include more complex and potentially acute services like chemotherapy administration and blood transfusions, which some stakeholders also maintain do not require direct supervision. Because we were concerned that these services had a higher probability of needing a physician or nonphysician practitioner to furnish assistance and direction through provision of the service, we had reasoned that we could require hospitals to create internal guidelines specifying a supervision level and protocols for staffing that supervision level for every extended duration service, including chemotherapy administration and blood transfusions. We considered minimum requirements for these internal supervision guidelines, including annual review and approval by a governing committee, periodic internal evaluation, and the ability to make these guidelines available to auditors if requested. Further, auditors would review those guidelines if a quality or patient safety event were to occur. Fundamentally, we did not choose this policy because, while many commenters liked this option for the flexibility that it offered, it did not address commenters fundamental concern that our uniform requirement for direct supervision as a condition of payment did not consider the relative risk for needing a supervising physician or nonphysician practitioner's physical presence against the cost of providing direct supervision. Because commenters disagreed about the appropriate level of supervision for individual services, such as chemotherapy, and because we continue

to believe supervision is a key component of the service Medicare purchases for its beneficiaries, we believe that an independent entity, whether the APC Panel or other technical committee, should evaluate services for the appropriate supervision level, potentially something other than direct supervision, to support provision of a safe, quality service. We also did not choose this alternative because some commenters did believe the policy would be burdensome to implement and maintain. Finally, we rejected this alternative because a variable standard of supervision across hospitals could be administratively difficult for us to audit and evaluate.

Second, we considered whether to exclude CAHs from the requirements for direct supervision of therapeutic services. We considered limiting CAHs to their CoPs, which in effect only require them to operate under general supervision. We also considered extending the notice of nonenforcement while we further develop policies. As discussed above, we believe there are strong grounds for applying the same supervision requirements to CAHs as to all other hospitals. One of these grounds is that hospital outpatient services are furnished "incident to" physicians' services, and we believe that the incident to rules apply equally to critical access and other types of hospitals. We continue to believe that Medicare should purchase the same basic level of quality and safe outpatient care for all beneficiaries, whether from a CAH, a small rural hospital, or other hospitals. Moreover, having reviewed public comments, we do not believe it is safe to permit general supervision of all hospital outpatient therapeutic services. At the same time, we acknowledge that in order to purchase the same outpatient care from CAHs as other hospitals, we need to have a national discussion about what constitutes the appropriate supervision for a given service. Therefore, we decided to extend the notice of nonenforcement for CAHs, as well as adding in small rural hospitals, while we propose and finalize a process for evaluating service-specific supervision levels.

We believe that the policies in this final rule will address industry concerns while maintaining an adequate level of safety and quality of care in the hospital outpatient services that Medicare purchases.

2. Limitations of Our Analysis

The distributional impacts presented here are the projected effects of the CY 2011 policy changes on various hospital groups. We post on the CMS Web site our hospital-specific estimated payments for CY 2011 with the other supporting documentation for this final rule with comment period. To view the hospital-specific estimates, we refer readers to the CMS Web site at: *http://www.cms.hhs.gov/HospitalOutpatientPPS/.* Select "regulations and notices" from the left side of the page and then select "CMS–1504–FC" from the list of regulations and notices. The hospital-specific file layout and the hospital-specific file are listed with the other supporting documentation for this final rule with comment period. We show hospital-specific data only for hospitals whose claims were used for modeling the impacts shown in Table 66 below. We do not show hospital-specific impacts for hospitals whose claims we were unable to use. We refer readers to section II.A.2. of this final rule with comment period for a discussion of the hospitals whose claims we do not use for ratesetting and impact purposes.

We estimate the effects of the individual policy changes by estimating payments per service, while holding all other payment policies constant. We use the best data available, but do not attempt to predict behavioral responses to our policy changes. In addition, we do not make adjustments for future changes in variables such as service volume, service mix, or number of encounters. As we have done in previous rules, in the CY 2011 OPPS/ASC proposed rule (75 FR 46445), we solicited public comment and information about the anticipated effects of our changes on providers and our methodology for estimating them.

We received many public comments on the proposed changes to payment policies and to proposed payment rates for the CY 2011 OPPS. We have summarized these public comments and provided our responses to them in other sections of this final rule with comment period as part of our discussions of the specific topics to which the comments pertained. We did not receive any public comments on our methodology for estimating the anticipated effects of our proposed changes on providers or other parties. For the reasons set forth in the proposed rule (75 FR 46444), we are finalizing our proposed methodology for estimating the anticipated effects of our proposed changes on providers or other parties.

3. Estimated Effects of This Final Rule with Comment Period on Hospitals

Table 66 below shows the estimated impact of this final rule with comment period on hospitals. Historically, the first line of the impact table, which estimates the change in payments to all hospitals, has always included cancer and children's hospitals, which are held harmless to their pre-BBA payment-to-cost ratio. As discussed in section II.F. of this final rule with comment period, we are not finalizing our proposal to extend an adjustment to certain cancer hospitals under section 3138 of the Affordable Care Act. Because these hospitals will continue to receive hold harmless payments, per our standard policy, we have excluded them from this impact table. We also include CMHCs in the first line that includes all providers because we include CMHCs in our weight scalar estimate.

We present separate impacts for CMHCs in Table 66 because CMHCs are paid only for partial hospitalization services and CMHCs are a different provider type from hospitals. For CY 2010, CMHCs and hospitals were paid under two APCs for services under the OPPS: APC 0172 (Level 1 Partial Hospitalization (3 services)) and APC 0173 (Level II Partial Hospitalization (4 or more services)). For CY 2011, we are paying CMHCs under APC 0172 (Level I Partial Hospitalization (3 services) for CMHCs) and APC 0173 (Level II Partial Hospitalization (4 or more services) for CMHCs), and we are paying hospitals for partial hospitalization services under APC 0175 (Level I Partial Hospitalization (3 services) for Hospital-based PHPs) and APC 0176 (Level II Partial Hospitalization (4 or more services) for Hospital-based PHPs). We display the impact on CMHCs of this policy change below and we discuss the impact on CMHCs in section XX.B.4. of this final rule with comment period.

The estimated increase in the total payments made under the OPPS is limited by the increase to the conversion factor set under the methodology in the statute. The distributional impacts presented do not include assumptions about changes in volume and service mix. The increase to the conversion factor is reduced by 0.25 percentage point as required by section 3401(i) of the Affordable Care Act and as amended by section 10319(g) of such Act and further amended by section 1105(e) of such Act. Section 3137 of the Affordable Care Act, as amended by the HCERA, extended additional payment to section 508 reclassification hospitals and special exception hospital wages outside budget neutrality through September 30, 2010. The amounts attributable to these reclassifications are incorporated into the CY 2010 estimates in Table 66. Section 10324 of the Affordable Care Act, as amended by HCERA, further authorized additional

expenditures outside budget neutrality for hospitals in certain frontier States to have a wage index of 1.00. The amounts attributable to this frontier State wage index adjustment are incorporated into the CY 2011 estimates in Table 66.

Table 66 shows the estimated redistribution of hospital and CMHC payments among providers as a result of APC reconfiguration and recalibration; wage indices and the rural adjustment; the combined impact of the APC recalibration, wage and rural adjustment effects, and the market basket update to the conversion factor; the frontier State wage index adjustment; and, finally, estimated redistribution considering all payments for CY 2011 relative to all payments for CY 2010, including the impact of changes in estimated outlier payments, expiring section 508 wage indices, and changes to the pass-through payment estimate. We did not model an explicit budget neutrality adjustment for the rural adjustment for SCHs because we are not making any changes to the policy for CY 2011. Because the updates to the conversion factor, including the update of the market basket, less the market basket reduction authorized under the Affordable Care Act, and the subtraction of additional money dedicated to pass-through payment for CY 2011, are applied uniformly across services, observed redistributions of payments in the impact table for hospitals largely depend on the mix of services furnished by a hospital (for example, how the APCs for the hospital's most frequently furnished services will change), and the impact of the wage index changes on the hospital. However, total payments made under this system and the extent to which this final rule with comment period will redistribute money during implementation also will depend on changes in volume, practice patterns, and the mix of services billed between CY 2010 and CY 2011 by various groups of hospitals, which CMS cannot forecast.

Overall, the OPPS rates for CY 2011 will have a positive effect for providers paid under the OPPS, resulting in a 2.5 percent estimated increase in Medicare payments. Removing cancer and children's hospitals because their payments are held harmless to the pre-OPPS ratio between payment and cost and CMHCs suggests that these changes will result in a 2.8 percent estimated increase in Medicare payments to all other hospitals.

To illustrate the impact of the final CY 2011 changes, our analysis begins with a baseline simulation model that uses the final CY 2010 weights, the FY 2010 final IPPS wage indices that include reclassifications, and the final CY 2010 conversion factor. Column 2 in Table 66 shows the independent effect of the changes resulting from the reclassification of services among APC groups and the recalibration of APC weights, based on 12 months of CY 2009 OPPS hospital claims data and the most recent cost report data. We modeled the effect of the APC recalibration changes for CY 2011 by varying only the weights (the final CY 2010 weights versus the final CY 2011 weights calculated using the service mix and volume in the CY 2009 claims used for this final rule with comment period) and calculating the percent difference in weight. Column 2 also reflects the effect of the changes resulting from the APC reclassification and recalibration changes and any changes in multiple procedure discount patterns or conditional packaging that occur as a result of the changes in the relative magnitude of payment weights.

Column 3 reflects the independent effects of the updated wage indices, including the application of budget neutrality for the rural floor policy on a nationwide basis. This column excludes the effects of the frontier wage index adjustment, which is not budget neutral and is shown in column 5. We did not model a budget neutrality adjustment for the rural adjustment for SCHs because we are making no changes to the policy for CY 2011. We modeled the independent effect of updating the wage indices by varying only the wage indices, holding APC relative weights, service mix, and the rural adjustment constant and using the CY 2011 scaled weights and a CY 2010 conversion factor that included a budget neutrality adjustment for the effect of changing the wage indices between CY 2010 and CY 2011.

Column 4 demonstrates the combined "budget neutral" impact of APC recalibration (that is, Column 2), the wage index update (that is, Column 3), as well as the impact of updating the conversion factor with the adjusted OPD fee schedule increase (also commonly known as the market basket update, in this case, the 2.6 percent hospital market basket update less the 0.25 percentage point reduction required by the Affordable Care Act). We modeled the independent effect of the budget neutrality adjustments and the adjusted OPD fee schedule increase by using the weights and wage indices for each year, and using a CY 2010 conversion factor that included the adjusted OPD fee schedule increase and a budget neutrality adjustment for differences in wage indices.

Column 5 demonstrates the impact of the budget neutral adjustments and the OPD fee schedule increase reflected in Column 4 combined with the non-budget neutral frontier State wage index adjustment, discussed in section II.C.1. of this final rule with comment period.

Finally, Column 6 depicts the full impact of the CY 2011 policies on each hospital group by including the effect of all the changes for CY 2011 (including the APC reconfiguration and recalibration shown in Column 2) and comparing them to all estimated payments in CY 2010 (these CY 2010 estimated payments include the payments resulting from the non-budget neutral increases to wage indices under section 508 of Public Law 108–173 as extended by Public Law 111–148 through September 30, 2010). Column 6 shows the combined budget neutral effects of Columns 2 through 4, plus the impact of the frontier State wage index adjustment; the change to the fixed-dollar outlier threshold from $2,175 to $2,025 as discussed in section II.G. of this final rule with comment period; the expiration of section 508 reclassifications; the change in the HOP QDRP payment reduction for the small number of hospitals in our impact model that failed to meet the reporting requirements (see section XVI.D. of this final rule with comment period); and the impact of increasing the estimate of the percentage of total OPPS payments dedicated to transitional pass-through payments. Of the 90 hospitals that failed to meet the HOP QDRP reporting requirements for the full CY 2010 update (and assumed, for modeling purposes, to be the same number for CY 2011), we included 11 hospitals in our model because they had both CY 2009 claims data and recent cost report data. We estimate that the cumulative effect of all changes for CY 2011 will increase payments to all providers by 2.5 percent for CY 2011. We modeled the independent effect of all changes in Column 6 using the final weights for CY 2010 and the final weights for CY 2011. We used the final conversion factor for CY 2010 of $67.241, which was announced in the notice describing implementation of the Affordable Care Act provisions (75 FR 45769) and the CY 2011 conversion factor of $68.876 discussed in section II.B. of this final rule with comment period.

Column 6 also contains simulated outlier payments for each year. We used the charge inflation factor used in the FY 2011 IPPS/LTCH PPS final rule of 4.83 percent (1.0483) to increase individual costs on the CY 2009 claims, and we used the most recent overall CCR in the July 2010 Outpatient Provider-Specific File (OPSF). Using the CY 2009 claims and a 4.83 percent

charge inflation factor, we currently estimate that outlier payments for CY 2010, using a multiple threshold of 1.75 and a fixed-dollar threshold of $2,175, will be approximately 0.85 percent of total payments. Outlier payments of 0.85 percent are incorporated in the CY 2010 comparison in Column 6. We used the same set of claims and a charge inflation factor of 9.88 percent (1.0988) and the CCRs in the July 2010 OPSF, with an adjustment of 0.9910, to reflect relative changes in cost and charge inflation between CY 2009 and CY 2011, to model the CY 2011 outliers at 1.0 percent of estimated total payments using a multiple threshold of 1.75 and a fixed-dollar threshold of $2,025.

Column 1: Total Number of Hospitals

The first line in Column 1 in Table 66 shows the total number of providers (4,185), including designated cancer and children's hospitals and CMHCs for which we were able to use CY 2009 hospital outpatient claims to model CY 2010 and CY 2011 payments, by classes of hospitals. We excluded all hospitals for which we could not accurately estimate CY 2010 or CY 2011 payment and entities that are not paid under the OPPS. The latter entities include CAHs, all-inclusive hospitals, and hospitals located in Guam, the U.S. Virgin Islands, Northern Mariana Islands, American Samoa, and the State of Maryland. This process is discussed in greater detail in section II.A. of this final rule with comment period. At this time, we are unable to calculate a disproportionate share (DSH) variable for hospitals not participating in the IPPS. Hospitals for which we do not have a DSH variable are grouped separately and generally include freestanding psychiatric hospitals, rehabilitation hospitals, and long-term care hospitals. We show the total number (3,906) of OPPS hospitals, excluding the hold-harmless cancer and children's hospitals and CMHCs, on the second line of the table. We excluded cancer and children's hospitals because section 1833(t)(7)(D) of the Act permanently holds harmless cancer hospitals and children's hospitals to their proportional payment relative to reasonable cost prior to payment under the OPPS and, therefore, we removed them from our impact analyses. We show the isolated impact on 217 CMHCs at the bottom of the impact table and discuss that impact separately below.

Column 2: APC Changes Due to Reassignment and Recalibration

This column shows the combined effects of the reconfiguration, recalibration, and other policies (such as setting payment for separately payable drugs and biologicals at ASP+5 percent with an accompanying reduction in the amount of cost associated with packaged drugs and biologicals and changes in payment for PHP services). Overall, we estimate that changes in APC reassignment and recalibration across all services paid under the OPPS will increase payments to urban hospitals by 0.3 percent. We estimate that both large and other urban hospitals will see an increase of 0.3 percent, all attributable to recalibration. We estimate that urban hospitals billing fewer than 5,000 lines for OPPS services will experience an increases of 2.2, while urban hospitals billing 5,000 or more lines for OPPS services will see increases of 0.1 to 0.7 percent.

Overall, we estimate that rural hospitals will experience no change as a result of changes to the APC structure. We estimate that rural hospitals with fewer than 101 beds will experience decreases of 0.1 to 0.5 percent as a result of APC recalibration and that rural hospitals with 101 beds or more will experience increases up to 0.4 percent as a result of APC recalibration. We estimate that rural hospitals that report fewer than 43,000 lines for OPPS services will experience decreases of 1.2 to 0.4 percent, while rural hospitals that report 43,000 or more lines for OPPS services will see an increase of 0.1 percent in payment as a result of APC recalibration.

Among teaching hospitals, we estimate that the impact resulting from APC recalibration will include an increase of 0.4 percent for major teaching hospitals and an increase of 0.3 for minor teaching hospitals.

Classifying hospitals by type of ownership suggests that voluntary, proprietary and governmental hospitals will see an estimated increase of 0.3 percent as a result of APC recalibration.

Finally, we estimate that hospitals for which DSH payments are not available will experience a decrease of 0.7 to 0.4 percent. We estimate that most other classes of hospitals will experience modest increases from CY 2010 to CY 2011 resulting from APC recalibration.

Column 3: New Wage Indices and the Effect of the Rural Adjustment

This column estimates the impact of applying the final FY 2011 IPPS wage indices for the CY 2011 OPPS without the influence of the frontier State wage index adjustment or the expiration of the section 508 wage index adjustment, which are not budget neutral. The frontier State wage index adjustment is reflected in the combined impact shown in columns 5 and 6. The expiring section 508 adjustment is reflected in column 6. We are not changing the rural payment adjustment for CY 2011. We estimate that the combination of updated wage data and nationwide application of rural floor budget neutrality will redistribute payment among regions. We also updated the list of counties qualifying for the section 505 out-migration adjustment. Overall, we estimate that urban hospitals will experience no change from CY 2010 to CY 2011, and that rural hospitals will experience a decrease of 0.2 percent as a result of the updated wage indices. We estimate that hospitals in rural New England States and rural West South Central States will experience increases of 0.8 and 0.7 percent, respectively, while other rural regions will experience decreases from 0.6 to 0.1 percent. We estimate that hospitals located in urban New England, East North Central, West South Central and Pacific regions will experience increases of 0.1 to 0.5 percent while other urban regions will experience no change or decreases of 0.4 to 0.1 percent.

Column 4: All Budget Neutrality Changes Combined with the Adjusted OPD Fee Schedule Increase

We estimate that the addition of the adjusted OPD fee schedule increase factor of 2.35 percent (which includes the reduction to the OPD fee schedule update factor of a 0.25 percentage point as required by section 3401(i), 10319(g), and section 1105(e) of the Affordable Care Act) will mitigate the negative impacts on hospital payments for CY 2011 created by the budget neutrality adjustments made in Columns 2 and 3. Rural hospitals with fewer than 43,000 lines experience the smallest increases of between 1.4 and 1.9 percent. In general, Column 4 shows that all hospitals will experience an estimated increase of 2.6 percent, attributable to the 2.35 percent adjusted OPD fee schedule increase factor combined with the budget neutrality adjustments.

Overall, we estimate that these changes will increase payments to urban hospitals by 2.7 percent. We estimate that large urban hospitals will experience an increase of 2.8 percent, and "other" urban hospitals will experience a 2.6 percent increase. We estimate that rural hospitals will experience a 2.2 percent increase as a result of the adjusted OPD fee schedule increase factor and other budget neutrality adjustments. We estimate that urban hospitals that bill less than 5,000 lines of OPPS services will experience the largest increase of 4.8 percent and that rural hospitals will experience increases of 1.4 to 2.2 percent.

Among teaching hospitals, we estimate that the observed impacts resulting from the adjusted OPD fee schedule increase factor and other budget neutrality adjustments will include an increase of 2.8 and 2.6 percent, respectively, for major and minor teaching hospitals.

Classifying hospitals by type of ownership suggests that proprietary and government hospitals will experience estimated increases of 2.7 percent, while voluntary hospitals will experience increases of 2.6 percent.

Column 5: Frontier State Wage Index Adjustment

This column shows the impact of all budget neutrality adjustments, application of the 2.35 percent adjusted OPD fee schedule increase factor, and the non-budget neutral impact of applying the frontier State wage adjustment (that is, the frontier State wage index change in addition to all changes reflected in column 4). In general, we estimate that all facilities will see a combined increase of 2.4 percent and that all hospitals will see a combined increase of 2.7 percent. Hospitals in the rural Mountain Region will see an increase of 4.0 percent as a result of the combined effects of all budget neutrality adjustments, application of the 2.35 percent adjusted OPD fee schedule increase factor, and the non-budget neutral impact of applying the frontier State wage adjustment.

Column 6: All Changes for CY 2011

Column 6 compares all changes for CY 2011 to estimated final payment for CY 2010, including the change in the outlier threshold, payment reductions for hospitals that failed to meet the HOP QDRP reporting requirements, the influence of the expiration of the section 508 wage adjustment, and the difference in pass-through estimates that are not included in the combined percentages shown in Column 5. This column includes estimated payment for a handful of hospitals receiving reduced payment because they did not meet their hospital outpatient quality measure reporting requirements; however, we estimate that the anticipated change in payment between CY 2010 and CY 2011 for these hospitals will be negligible. (We further discuss the estimated impacts of hospitals' failure to meet these requirements below in section XX.D. of this final rule with comment period.) Overall, we estimate that facilities will experience an increase of 2.5 percent under this final rule with comment period in CY 2011 relative to total spending in CY 2010. The projected 2.5 percent increase for all facilities in Column 6 of Table 66 reflects the 2.35 percent OPD fee schedule increase, less 0.01 percent for the change in the pass-through estimate between CY 2010 and CY 2011, plus 0.15 percent for the difference in estimated outlier payments between CY 2010 (0.85 percent) and CY 2011 (1.0 percent), and less 0.06 percent due to the expiration of the special, non-budget neutral wage index payments made under section 508, plus 0.10 percent due to the frontier wage index adjustment. When we exclude cancer and children's hospitals (which are held harmless to their pre-OPPS costs) and CMHCs, the estimated increase is 2.8 percent.

We estimate that the combined effect of all changes for CY 2011 will increase payments to urban hospitals by 2.9 percent. We estimate that large urban hospitals will experience a 2.9 percent increase, while "other" urban hospitals will experience an increase of 2.8 percent. We estimate that urban hospitals that bill less than 5,000 lines of OPPS services will experience an increase of 5.1 percent, and we estimate that urban hospitals that bill 5,000 or more lines of OPPS services will experience increases between 2.7 percent and 3.6 percent.

Overall, we estimate that rural hospitals will experience a 2.4 percent increase as a result of the combined effects of all changes for CY 2011. We estimate that rural hospitals that bill less than 5,000 lines of OPPS services will experience an increase of 3.6 percent and rural hospitals that bill 5,000 or more lines of OPPS services will experience increases ranging from 1.9 percent to 2.5 percent.

Among teaching hospitals, we estimate that the impacts resulting from the combined effects of all changes will include an increase of 3.0 percent for major teaching hospitals and 2.9 percent for minor teaching hospitals.

Classifying hospitals by type of ownership, we estimate that voluntary and proprietary hospitals will gain 2.8 percent, and that governmental hospitals will experience an increase of 2.9 percent.

4. Estimated Effects of This Final Rule With Comment Period on CMHCs

The last line of Table 66 demonstrates the isolated impact on CMHCs. CMHCs are currently paid under two APCs for services under the OPPS: APC 0172 (Level 1 Partial Hospitalization (3 services)) and APC 0173 (Level II Partial Hospitalization (4 or more services)). This final rule with comment period further refines payment within these partial hospitalization APCs for CY 2011 by providing two payment rates for partial hospitalization services for each provider type (CMHCs and hospital-based PHPs). Specifically, APC 0172 is retitled: "Level I Partial Hospitalization (3 services) for CMHCs;" APC 0173 is retitled: "Level II Partial Hospitalization (4 or more services) for CMHCs;" new APC 0175 is titled: "Level I Partial Hospitalization (3 services) for Hospital-Based PHPs" and new APC 0176 is titled: "Level II Partial Hospitalization (4 or more services) for Hospital-Based PHPs." We are adopting payment rates for each APC based on the cost data derived from claims and cost reports for the provider type to which the APC is specific and are providing a 2-year transition to CMHC rates based solely on CMHC data for the two CMHC PHP per diem rates. For CY 2011, we are calculating the CMHC PHP APC Level I and Level II rates by taking 50 percent of the difference between the CY 2010 final hospital-based medians and the CY 2011 final CMHC medians and adding that number to the CY 2011 final CMHC medians. We modeled the impact of this APC policy change assuming that CMHCs will continue to provide the same number of days of PHP care, with each day having either three services or four or more services, as seen in the CY 2009 claims data. We excluded days with one or two services. Because the relative weights for APC 0172 (Level 1 Partial Hospitalization (3 services)) and APC 0173 (Level II Partial Hospitalization (4 or more services)) both decline in CY 2011 to reflect CMHC cost data for partial hospitalization services provided by CMHCs under this final rule with comment period, we estimate that there will be a 24.1 percent decrease in payments to CMHCs due to these APC policy changes (shown in Column 2).

Column 3 shows that the estimated impact of adopting the CY 2011 wage index values will result in a 0.9 percent increase in payments to CMHCs. We note that all providers paid under the OPPS, including CMHCs, will receive a 2.35 percent OPD fee schedule increase. Combining this OPD fee schedule increase, along with changes in APC policy for CY 2011 and the CY 2011 wage index updates, changes in outlier and pass-though payments, and the expiration of section 508 wages, we estimate that the combined impact on CMHCs for CY 2011 will be a 21.1 percent decrease in payment.

The impact on hospitals of the changes to payment rates to hospitals for partial hospitalization services is reflected in the impact of all changes on hospitals.

All providers paid under the OPPS will receive a 2.35 percent OPD fee schedule increase under this policy. Combining this OPD fee schedule increase, along with changes in APC policy for CY 2011 and the CY 2011 wage index updates, changes in outlier and pass-through payments, and the expiration of section 508 wages, we estimate that the combined impact hospitals within the PPS system will be a 2.5 percent increase in total payment for CY 2011.

Column (1) shows total hospitals.

Column (2) shows the impact of changes resulting from the reclassification of HCPCS codes among APC groups and the recalibration of APC weights based on 2009 hospital claims data.

Column (3) shows the budget neutral impact of updating the wage index by applying the FY 2011 hospital inpatient wage index. We are not making any changes to the rural adjustment.

Column (4) shows the impact of all budget neutrality adjustments and the addition of the 2.35% adjusted OPD fee schedule increase factor (2.6 percent market basket reduced by 0.25 percentage point in accordance with the Affordable Care Act).

Column (5) shows the non-budget neutral impact of applying the frontier adjustment, after application of the adjusted OPD fee schedule increase factor

Column (6) shows the additional adjustments to the conversion factor resulting from a change in the pass-through estimate and adds outlier payments. This column also shows the expiration of section 508 wages on September 30, 2010 and the application of the frontier wage adjustment for CY 2011.

*These 4,185 providers include children and cancer hospitals, which are held harmless to pre-BBA payments, and CMHCs.

** Complete DSH numbers are not available for providers that are not paid under IPPS, including rehabilitation, psychiatric, and long-term care hospitals.

BILLING CODE 4120–01–C

6. Estimated Effect of This Final Rule With Comment Period on Beneficiaries

For services for which the beneficiary pays a copayment of 20 percent of the payment rate, the beneficiary share of payment will increase for services for which the OPPS payments will rise and will decrease for services for which the OPPS payments will fall. For example, for a service assigned to Level IV Needle Biopsy/Aspiration Except Bone Marrow (APC 0037) in the CY 2010 OPPS, the national unadjusted copayment is $228.76, and the minimum unadjusted copayment is $208.97. For CY 2011, the national unadjusted copayment for APC 0037 will be $228.76, the same rate in effect for CY 2010. The minimum unadjusted copayment for APC 0037 will be $216.29 or 20 percent of the CY 2011 national unadjusted payment rate for APC 0037 of $1,081.42. The minimum unadjusted copayment will rise because the payment rate for APC 0037 will rise for CY 2011. In all cases, the statute limits beneficiary liability for copayment for a procedure to the hospital inpatient deductible for the applicable year. The CY 2010 hospital inpatient deductible is $1,100. The CY 2011 hospital inpatient deductible was not known at the time this final rule was written.

In order to better understand the impact of changes in copayment on beneficiaries, we modeled the percent change in total copayment liability using CY 2009 claims. We estimate, using the claims of the 4,185 hospitals and CMHCs on which our modeling is based, that total beneficiary liability for copayments will decline as an overall percentage of total payments, from 22.3 percent in CY 2010 to 21.9 percent in CY 2011.

7. Conclusion

The changes in this final rule with comment period will affect all classes of hospitals and CMHCs. We estimate that some classes of hospitals will experience significant gains and others less significant gains, but all classes of hospitals will experience positive updates in OPPS payments in CY 2011 with one exception. We estimate that CMHCs will see an overall decrease in payment of 21.1 percent during this first year of a two-year transition to payment rates for partial hospitalization services

at CMHCs based on cost report and claims data submitted by CMHCs.

Table 66 demonstrates the estimated distributional impact of the OPPS budget neutrality requirements that will result in a 2.5 percent increase in payments for all services paid under the OPPS in CY 2011, after considering all changes to APC reconfiguration and recalibration, as well as the adjusted market basket increase, wage index changes, including the frontier State wage index adjustment and the expiration of section 508 wage index reclassifications, estimated payment for outliers, and changes to the pass-through payment estimate. The accompanying discussion, in combination with the rest of this final rule with comment period, constitutes a regulatory impact analysis.

8. Accounting Statement

As required by OMB Circular A–4 (available at *http://www.whitehouse.gov/omb/circulars/a004/a-4.pdf*), in Table 67, we have prepared an accounting statement showing the CY 2011 estimated hospital OPPS incurred benefit impact associated with the CY 2011 OPD fee schedule increase shown in this final rule with comment period based on the FY 2011 President's Budget. All estimated impacts are classified as transfers.

TABLE 67—ACCOUNTING STATEMENT: CY 2011 ESTIMATED HOSPITAL OPPS TRANSFERS FROM CY 2010 TO CY 2011 ASSOCIATED WITH THE FINAL CY 2011 HOSPITAL OUTPATIENT OPD FEE SCHEDULE INCREASE

Category	Transfers
Annualized Monetized Transfers.	$0.7 billion.
From Whom to Whom.	Federal Government to outpatient hospitals and other providers who received payment under the hospital OPPS.
Total	$0.7 billion.

C. Effects of ASC Payment System Changes in This Final Rule With Comment Period

On August 2, 2007, we published in the **Federal Register** the final rule for the revised ASC payment system, effective January 1, 2008 (72 FR 42470). In that final rule, we adopted the methodologies to set payment rates for covered ASC services to implement the revised payment system so that it will be designed to result in budget neutrality as required by section 626 of Public Law 108–173; established that the OPPS relative payment weights will be the basis for payment and that we will update the system annually as part of the OPPS rulemaking cycle; and provided that the revised ASC payment rates will be phased in over 4 years. During the 4-year transition to full implementation of the ASC payment rates, payments for surgical procedures performed in ASCs that were on the CY 2007 ASC list of covered surgical procedures were made using a blend of the CY 2007 ASC payment rate and the ASC payment rate calculated according to the ASC standard ratesetting methodology for the applicable transitional year. In CY 2009, we paid ASCs using a 50/50 blend, in which payment was calculated by adding 50 percent of the CY 2007 ASC rate for a surgical procedure on the CY 2007 ASC list of covered surgical procedures and 50 percent of the CY 2009 ASC rate calculated according to the ASC standard ratesetting methodology for the same procedure. For CY 2010, we transitioned the blend to a 25/75 blend of the CY 2007 ASC rate and the CY 2010 ASC payment rate calculated according to the ASC standard ratesetting methodology. In CY 2011, we will pay ASCs for all covered surgical procedures, including those on the CY 2007 ASC list, at the ASC payment rates calculated according to the ASC standard ratesetting methodology.

ASC payment rates are calculated by multiplying the ASC conversion factor by the ASC relative payment weight. As discussed fully in section XV. of this final rule with comment period, we set the CY 2011 ASC relative payment weights by scaling CY 2011 ASC relative payment weights by the ASC scaler of 0.9238. The estimated effects of the updated relative payment weights on payment rates during this first year of full implementation of the ASC payment rates calculated according to the ASC standard ratesetting methodology are varied and are reflected in the estimated payments displayed in Tables 68 and 69 below.

Beginning in CY 2011, section 3401 of the Affordable Care Act requires that the annual update to the ASC payment system, which is the consumer price index for all urban consumers (CPI–U), be reduced by the productivity adjustment. The Affordable Care Act defines the productivity adjustment to be equal to the 10-year moving average of changes in annual economy-wide private nonfarm business multi-factor productivity (MFP) (as projected by the Secretary for the 10-year period ending with the applicable fiscal year, year, cost reporting period, or other annual period). We calculated the CY 2011 ASC conversion factor by adjusting the CY 2010 ASC conversion factor by 0.9996 to account for changes in the pre-floor and pre-reclassified hospital wage indices between CY 2010 and CY 2011 and by applying the CY 2011 MFP-adjusted CPI–U of 0.2 percent (1.5 percent CPI–U minus 1.3 percent MFP). The CY 2011 ASC conversion factor is $41.939.

1. Alternatives Considered

Alternatives to the changes we are making and the reasons that we have chosen specific options are discussed throughout this final rule with comment period. Some of the major ASC issues discussed in this final rule with comment period and the options considered are discussed below.

a. Alternatives Considered for Office-Based Procedures

According to our final policy for the revised ASC payment system, we designate as office-based those procedures that are added to the ASC list of covered surgical procedures in CY 2008 or later years and that we determine are predominantly performed in physicians' offices based on consideration of the most recent available volume and utilization data for each individual procedure HCPCS code and, if appropriate, the clinical characteristics, utilization, and volume of related HCPCS codes. We establish payment for procedures designated as office-based at the lesser of the MPFS nonfacility practice expense payment amount or the ASC rate developed according to the standard methodology of the revised ASC payment system.

In developing this final rule with comment period, we reviewed the full CY 2009 utilization data for all surgical procedures added to the ASC list of covered surgical procedures in CY 2008 or later years and for those procedures for which the office-based designation is temporary in the CY 2010 OPPS/ASC final rule with comment period (74 FR 60605 through 60608). Based on that review, and as discussed in section XV.C.1.b. of this final rule with comment period, we are newly designating two surgical procedures as permanently office-based and making permanent the office-based designations of three existing surgical procedures that have temporary office-based designations in CY 2010. In addition, we are making temporary office-based designations for seven procedures in CY 2011 that were designated as temporarily office-based for CY 2010. We considered two alternatives in developing this policy.

Book 2 of 2 Books
Pages 72127–72650

Part II—Continued

Department of Health and Human Services

Center for Medicare & Medicaid Services

42 CFR Parts 410, 411, 412, et al.

Medicare Program: Hospital Outpatient Prospective Payment System and CY 2011 Payment Rates; Ambulatory Surgical Center Payment System and CY 2011 Payment Rates; Payments to Hospitals for Graduate Medical Education Costs; Physician Self-Referral Rules and Related Changes to Provider Agreement Regulations; Payment for Certified Registered Nurse Anesthetist Services Furnished in Rural Hospitals and Critical Access Hospitals; Final Rule

The first alternative we considered was to make no change to the procedure payment designations. This would mean that we would pay for the five procedures we are designating as permanently office-based and the seven procedures we are designating as temporarily office-based at an ASC payment rate calculated according to the standard ratesetting methodology of the revised ASC payment system. We did not select this alternative because our analysis of the data and our clinical review indicated that all five procedures we are designating as permanently office-based, as well as the seven procedures that we are designating temporarily as office-based, are considered to be predominantly performed in physicians' offices. Consistent with our final policy adopted in the August 2, 2007 final rule (72 FR 42509 through 42513), we were concerned that making payments at the standard ASC payment rate for the five procedures designated as permanently office-based and seven procedures designated as temporarily office-based could create financial incentives for the procedures to shift from physicians' offices to ASCs for reasons unrelated to clinical decisions regarding the most appropriate setting for surgical care. Further, consistent with our policy, we believe that when adequate data become available to make permanent determinations about procedures with temporary office-based designations, maintaining the temporary designation is no longer appropriate.

The second alternative we considered and the one we selected for CY 2011 is to designate two additional procedures as permanently office-based for CY 2011 and to make permanent the office-based designations of three of the procedures with temporary office-based designations in CY 2010. We also are designating seven procedures as temporarily office-based in CY 2011 that were designated as temporarily office-based for CY 2010. We chose this alternative because our claims data and clinical review indicate that these procedures could be considered to be predominantly performed in physicians' offices. We believe that designating these procedures as office-based, which results in the CY 2011 ASC payment rate for these procedures potentially being capped at the CY 2011 physicians' office rate (that is, the MPFS nonfacility practice expense payment amount), if applicable, is an appropriate step to ensure that Medicare payment policy does not create financial incentives for such procedures to shift unnecessarily from physicians' offices to ASCs, consistent with our final policy adopted in the August 2, 2007 final rule.

b. Alternatives Considered for Covered Surgical Procedures

According to our final policy for the revised ASC payment system, we designate as covered all surgical procedures that we determine would not be expected to pose a significant risk to beneficiary safety or would not be expected to require an overnight stay when performed on Medicare beneficiaries in an ASC.

In developing this final rule with comment period, we reviewed the clinical characteristics and full CY 2009 utilization data, if applicable, for all procedures reported by Category III CPT codes implemented July 1, 2010, and surgical procedures that were excluded from ASC payment for CY 2010. Based on this review, we identified 8 new surgical procedures described by Category III CPT codes that were new for July 2010 and 6 surgical procedures excluded from ASC payment for CY 2010, that we determined were appropriate for addition to the ASC list of covered surgical procedures. We considered two alternatives in developing this policy.

The first alternative we considered was to make no change to the CY 2010 ASC list of covered surgical procedures. We did not choose this alternative because our analysis of data and clinical review indicated that the 14 procedures we are designating as covered surgical procedures for CY 2011 would not be expected to pose a significant risk to beneficiary safety in ASCs and would not be expected to require an overnight stay. Consistent with our final policy, we were concerned that by continuing to exclude them from the list of ASC covered surgical procedures, we may unnecessarily limit beneficiaries' access to the services in the most clinically appropriate settings.

The second alternative we considered and the one we selected for CY 2011 was to designate 14 additional procedures as ASC covered surgical procedures for CY 2011. We chose this alternative because our claims data and clinical review indicate that these procedures will not be expected to pose a significant risk to beneficiary safety and will not be expected to require an overnight stay, and thus they meet the criteria for inclusion on the list of ASC covered surgical procedures. We believe that adding these procedures to the list of covered surgical procedures is an appropriate step to ensure that beneficiary access to services is not limited unnecessarily.

c. Alternatives Considered for the Extension of Waiver of Deductible to Services Furnished in Connection With or in Relation to a Colorectal Screening Test That Becomes Diagnostic

Section 4104(c)(2) of the Affordable Care Act waives the deductible with respect to a colorectal cancer screening test regardless of the code that is billed for the establishment of a diagnosis as a result of the test, or for the removal of tissue or other matter or other procedure that is furnished in connection with, as a result of, and in the same clinical encounter as a screening test. We are finalizing our proposal, without modification, for CY 2011 that the deductible be waived for all surgical services furnished in an ASC on the same date as a planned screening colonoscopy or planned flexible sigmoidoscopy as being furnished in connection with, as a result of, and in the same clinical encounter as the screening test (we note that barium enemas are not ASC covered ancillary or surgical procedures). As discussed in detail under the alternatives considered for the OPPS (section XX.B.1.a. of this final rule with comment period), we considered three alternatives for the extension of waiver of deductible to services furnished in connection with or in relation to a colorectal screening test that becomes diagnostic for CY 2011. The first alternative we considered, but did not propose for the reasons previously discussed, was to define a limited set of colonoscopy codes to which the waiver could apply when performed on the same date as a procedure that began as a screening colonoscopy or screening flexible sigmoidoscopy. The second alternative we considered, but did not propose for the reasons previously discussed, was to define a broader, but still limited set of codes (for example, selected surgical services) to which the waiver could apply when performed on the same date as a procedure that began as a screening colonoscopy or screening flexible sigmoidoscopy. The third alternative we considered, and the one we are selecting for CY 2011, is to apply the waiver to any surgical procedure on the same date as a screening colonoscopy or flexible sigmoidoscopy performed in an ASC that ASCs report is "in connection with, as a result of, and in the same clinical encounter as the screening test." As we discuss in detail in section XII.B.3., we have created HCPCS modifier PT that ASCs will append to the diagnostic procedure code that is reported instead of the screening colonoscopy or screening flexible sigmoidoscopy HCPCS code when the screening test

becomes a diagnostic service. As already discussed, we chose this alternative because we believe it provides the greatest ease of public understanding and ASC application. We believe that this alternative is appropriate because we believe that it will be very rare for an unrelated surgery to occur on the same date as one of these scheduled screening tests. Moreover, we believe that the risk of improper expenditures will be very small under this policy because it is the deductible, and not the coinsurance, that is waived for the related procedures other than the screening tests (that is, the Part B deductible is a fixed amount that the beneficiary pays before Medicare begins to pay and typically will be met after receiving one to two services).

2. Limitations of Our Analysis

Presented here are the projected effects of the changes for CY 2011 on Medicare payment to ASCs. A key limitation of our analysis is our inability to predict changes in ASC service mix between CY 2009 and CY 2011 with precision. We believe that the net effect on Medicare expenditures resulting from the CY 2011 changes will be small in the aggregate for all ASCs. However, such changes may have differential effects across surgical specialty groups as ASCs continue to adjust to the payment rates based on the policies of the revised ASC payment system. We are unable to accurately project such changes at a disaggregated level. Clearly, individual ASCs will experience changes in payment that differ from the aggregated estimated impacts presented below.

3. Estimated Effects of This Final Rule With Comment Period on Payments to ASCs

Some ASCs are multispecialty facilities that perform the gamut of surgical procedures, from excision of lesions to hernia repair to cataract extraction; others focus on a single specialty and perform only a limited range of surgical procedures, such as eye, digestive system, or orthopedic procedures. The combined effect on an individual ASC of the update to the CY 2011 payments will depend on a number of factors, including, but not limited to, the mix of services the ASC provides, the volume of specific services provided by the ASC, the percentage of its patients who are Medicare beneficiaries, and the extent to which an ASC provides different services in the coming year. The following discussion presents tables that display estimates of the impact of the CY 2011 update to the revised ASC payment system on Medicare payments to ASCs, assuming the same mix of services as reflected in our CY 2009 claims data. Table 68 depicts the estimated aggregate percent change in payment by surgical specialty or ancillary items and services group by comparing estimated CY 2010 payments to estimated CY 2011 payments, and Table 69 shows a comparison of estimated CY 2010 payments to estimated CY 2011 payments for procedures that we estimate will receive the most Medicare payment in CY 2011.

Table 68 shows the estimated effects on aggregate Medicare payments under the revised ASC payment system by surgical specialty or ancillary items and services group. We have aggregated the surgical HCPCS codes by specialty group, grouped all HCPCS codes for covered ancillary items and services into a single group, and then estimated the effect on aggregated payment for surgical specialty and ancillary items and services groups. The groups are sorted for display in descending order by estimated Medicare program payment to ASCs. The following is an explanation of the information presented in Table 68.

- Column 1—*Surgical Specialty or Ancillary Items and Services Group* indicates the surgical specialty into which ASC procedures are grouped or the ancillary items and services group which includes all HCPCS codes for covered ancillary items and services. To group surgical procedures by surgical specialty, we used the CPT code range definitions and Level II HCPCS codes and Category III CPT codes as appropriate, to account for all surgical procedures to which the Medicare program payments are attributed.
- Column 2—*Estimated ASC Payments* were calculated using CY 2009 ASC utilization (the most recent full year of ASC utilization) and CY 2010 ASC payment rates. The surgical specialty and ancillary items and services groups are displayed in descending order based on estimated CY 2010 ASC payments.
- Column 3—*Estimated CY 2011 Percent Change (Fully Implemented Payment Rates)* is the aggregate percentage increase or decrease in Medicare program payment to ASCs for each surgical specialty or ancillary items and services group that will be attributable to updates to ASC payment rates for CY 2011 compared to CY 2010.

As seen in Table 68, we estimate that the update to ASC rates for CY 2011 will result in a 0 percent decrease in aggregate payment amounts for eye and ocular adnexa procedures, a 4 percent decrease in aggregate payment amounts for digestive system procedures, and a 2 percent increase in aggregate payment amounts for nervous system procedures.

Generally, for the surgical specialty groups that account for less ASC utilization and spending, we estimate that the payment effects of the CY 2011 update are positive. We estimate that ASC payments for procedures in those surgical specialties will increase in CY 2011. For instance, we estimate that, in the aggregate, payment for integumentary system procedures will increase by 5 percent under the CY 2011 rates. We estimate similar effects for genitourinary, cardiovascular, musculoskeletal, respiratory, hematologic and lymphatic systems, and auditory system procedures as well.

An estimated increase in aggregate payment for the specialty group does not mean that all procedures in the group will experience increased payment rates. For example, the estimated modest increase for CY 2011 for nervous system procedures is likely due to increase in the ASC payment weight for some of the high volume procedures, such as CPT code 64721 (Neuroplasty and/or transposition; median nerve at carpal tunnel).

Also displayed in Table 68 is a separate estimate of Medicare ASC payments for the group of separately payable covered ancillary items and services. Payment for the current class of New Technology Intraocular Lenses (NTIOLs) is captured under this category. The current active class for NTIOLs for reduced spherical aberration expires on February 26, 2011. Because we did not find sufficient evidence of clinical benefit to implement a new class of NTIOLs for blue-light filtering to reduce glare, as discussed in section XV.E. of this final rule with comment period, we redistributed payment previously dedicated to separately payment for NTIOLs to other services for CY 2011. Therefore, we estimate that aggregate payments for these items and services will decrease by 58 percent for CY 2011. The payment estimates for the covered surgical procedures include the costs of packaged ancillary items and services. In rules for years prior to CY 2010, we did not have ASC payment data for covered ancillary items and services because, prior to CY 2008, they were paid under other fee schedules or packaged into payment for the covered surgical procedures. Beginning with the CY 2010 OPPS/ASC rulemaking, we have utilization data for those services as well as for all of the covered surgical procedures provided in ASCs under the revised payment system.

TABLE 68—ESTIMATED IMPACT OF THE FINAL CY 2011 UPDATE TO THE ASC PAYMENT SYSTEM ON AGGREGATE CY 2011 MEDICARE PROGRAM PAYMENTS BY SURGICAL SPECIALITY OR ANCILLARY ITEMS AND SERVICES GROUP

Surgical specialty group	Estimated CY 2010 ASC payments (in millions)	Estimated CY 2011 percent change (fully implemented)
(1)	(2)	(3)
Total	$3,257	0
Eye and ocular adnexa	1,426	0
Digestive system	699	−4
Nervous system	391	2
Musculoskeletal system	350	12
Genitourinary system	129	9
Integumentary system	122	5
Ancillary items and services	68	−58
Respiratory system	36	17
Cardiovascular system	24	7
Auditory system	8	9
Hematologic & lymphatic systems	4	16

Table 69 below shows the estimated impact of the updates to the revised ASC payment system on aggregate ASC payments for selected surgical procedures during CY 2011. The table displays 30 of the procedures receiving the greatest estimated CY 2010 aggregate Medicare payments to ASCs. The HCPCS codes are sorted in descending order by estimated CY 2010 program payment.

- Column 1–*HCPCS code*.
- Column 2–*Short Descriptor* of the HCPCS code.
- Column 3–*Estimated CY 2010 Allowed Charges* were calculated using CY 2009 ASC utilization (the most recent full year of ASC utilization) and the CY 2010 ASC payment rates. The estimated CY 2010 allowed charges are expressed in millions of dollars.
- Column 4–*Estimated CY 2011 Percent Change (Fully Implemented Payment Rates)* reflects the percent differences between the estimated ASC payment for CY 2010 and the estimated payment for CY 2011 based on the update.

As displayed in Table 69, 22 of the 30 procedures with the greatest estimated aggregate CY 2010 Medicare payment are included in the 3 surgical specialty groups that are estimated to account for the most Medicare payment to ASCs in CY 2011, specifically eye and ocular adnexa, digestive system, and nervous system surgical groups. Consistent with the estimated payment effects on the surgical specialty groups displayed in Table 68, the estimated effects of the CY 2011 update on ASC payment for individual procedures shown in Table 69 are varied.

The ASC procedure for which the most Medicare payment is estimated to be made in CY 2010 is the cataract removal procedure reported with CPT code 66984 (Extracapsular cataract removal with insertion of intraocular lens prosthesis (one stage procedure), manual or mechanical technique (e.g., irrigation and aspiration or phacoemulsification)). We estimate that the update to the ASC rates will result in a 1 percent payment decrease for this procedure in CY 2011. The estimated payment effects on two of the four other eye and ocular adnexa procedures included in Table 69 are more significant. We estimate that the payment rate for CPT code 66821 (Discission of secondary membranous cataract (opacified posterior lens capsule and/or anterior hyaloid); laser surgery (e.g., YAG laser) (one or more stages)) will decrease by 7 percent and payment for CPT code 67904 (Repair eyelid defect) will increase by 11 percent.

We estimate that the payment rates for all of the digestive system procedures included in Table 69 will decrease by 0 to 8 percent in CY 2011. Those estimated decreases are consistent with decreases in the previous 3 years under the revised ASC payment system and are expected because, under the previous ASC payment system, the payment rates for many high volume endoscopy procedures were almost the same as the payments for the procedures under the OPPS.

The estimated effects of the CY 2011 update on the nine nervous system procedures for which the most Medicare ASC payment is estimated to be made in CY 2010 will be variable. Our estimates indicate that the CY 2011 update will result in payment increases of 2 to 11 percent for 5 of the 9 procedures and result in a 1 percent decrease for the other 4 nervous system procedures. The nervous system procedures for which we estimate a positive effect on CY 2010 payments, include CPT codes 64721 (Neuroplasty and/or transposition; median nerve at carpal tunnel) and 63685 (Insertion or replacement of spinal neurostimulator pulse generator or receiver, direct or inductive coupling), which are expected to have payment increases of 11 percent and 7 percent respectively.

The estimated payment effects for most of the remaining procedures listed in Table 69 will be positive. For example, the payment rates for musculoskeletal CPT codes 29880 (Arthroscopy, knee, surgical; with meniscectomy (medial and lateral, including any meniscal shaving)) and 29881 (Arthroscopy, knee, surgical; with meniscectomy (medial OR lateral, including any meniscal shaving)) are estimated to increase 11 percent over the CY 2010 transitional payment rates. Musculoskeletal procedures are expected to account for a greater percentage of CY 2011 Medicare ASC spending as we estimate that payment for procedures in that surgical specialty group will increase under the revised payment system in CY 2011.

TABLE 69—ESTIMATED IMPACT OF THE FINAL CY 2011 UPDATE TO THE ASC PAYMENT SYSTEM ON AGGREGATE PAYMENTS FOR SELECTED PROCEDURES

CPT/ HCPCS Code * (1)	Short descriptor (2)	Estimated CY 2010 Allowed charges (in millions) (3)	Estimated CY 2011 percent change (fully implemented payment) (4)
66984	Cataract surg w/ iol, 1 stage	$1,095	−1

67042	Vit for macular hole	13	−1
50590	Fragmenting of kidney stone	13	−2

* Note that HCPCS codes proposed for deletion for CY 2011 are not displayed in this table.

The previous ASC payment system served as an incentive to ASCs to focus on providing procedures for which they determined Medicare payments will support their continued operation. We note that, historically, the ASC payment rates for many of the most frequently performed procedures in ASCs were similar to the OPPS payment rates for the same procedures. Conversely, procedures with ASC payment rates that were substantially lower than the OPPS rates have historically been performed least often in ASCs. We believed that the revised ASC payment system will encourage greater efficiency in ASCs and will promote significant increases in the breadth of surgical procedures performed in ASCs because it distributes payments across the entire spectrum of covered surgical procedures based on a coherent system of relative weights that are related to the clinical and facility resource requirements of those procedures.

The CY 2009 claims data that we used to develop the CY 2011 ASC payment system relative weights and rates reflect the second year of utilization under the revised payment system. Although the changes in the claims data are not large, the data reflect increased Medicare ASC spending for procedures that were newly added to the ASC list in CY 2008. Our estimates based on CY 2009 data indicate that for CY 2011 there will be especially noticeable increases in spending for respiratory systems, and hematologic and lymphatic systems, compared to the previous ASC payment system.

4. Estimated Effects of This Final Rule With Comment Period on Beneficiaries

We estimate that the CY 2011 update to the ASC payment system will be generally positive for beneficiaries with respect to the new procedures that we are adding to the ASC list of covered surgical procedures and for those that we are designating as office-based for CY 2011. First, as discussed in section XV.D.1.d. of this final rule with comment period, we are waiving the coinsurance, the Part B deductible, or both for certain preventive services recommended by the United States Preventive Services Task Force with a grade of A or B for any indication or population and that are appropriate for the individual to comply with sections 4104 and 10406 of the Affordable Care Act. Other than these services, the ASC coinsurance rate for all procedures is 20 percent. This contrasts with procedures performed in HOPDs, where the beneficiary is responsible for copayments that range from 20 percent to 40 percent of the procedure payment. Second, ASC payment rates under the revised payment system are lower than payment rates for the same procedures under the OPPS; therefore, the beneficiary coinsurance amount under the ASC payment system almost always will be less than the OPPS copayment amount for the same services. (The only exceptions will be if the ASC coinsurance amount exceeds the inpatient deductible. The statute requires that copayment amounts under the OPPS not exceed the inpatient deductible.) For new procedures that we are adding to the ASC list of covered surgical procedures in CY 2011, as well as for procedures already included on the list, and that are furnished in an ASC rather than the HOPD setting, the beneficiary coinsurance amount will be less than the OPPS copayment amount. Furthermore, the additions to the ASC list of covered surgical procedures will provide beneficiaries access to more surgical procedures in ASCs. Beneficiary coinsurance for services migrating from physicians' offices to ASCs may decrease or increase under the revised ASC payment system, depending on the particular service and the relative payment amounts for that service in the physician's office compared to the ASC. However, for those additional procedures that we are designating as office-based in CY 2011, the beneficiary coinsurance amount will be no greater than the beneficiary coinsurance in the physician's office.

In addition, as finalized in the August 2, 2007 final rule (72 FR 42521), in CY 2011, the final year of the 4-year transition to the ASC payment rates calculated according to the ASC standard ratesetting methodology of the revised ASC payment system, ASC payment rates for a number of commonly furnished ASC procedures will continue to be reduced, resulting in lower beneficiary coinsurance amounts for these ASC services in CY 2011.

5. Conclusion

The updates to the ASC payment system for CY 2011 will affect each of the approximately 5,000 ASCs currently approved for participation in the Medicare program. The effect on an individual ASC will depend on its mix of patients, the proportion of the ASC's patients that are Medicare beneficiaries, the degree to which the payments for the procedures offered by the ASC are changed under the revised payment system, and the extent to which the ASC provides a different set of procedures in the coming year.

The CY 2011 update to the revised ASC payment system includes an MFP-adjusted CPI–U increase factor of 0.2 percent that we estimate will result in a slightly higher amount of Medicare expenditures in CY 2011 than was estimated to be made in CY 2010. We estimate that the update to the revised ASC payment system, including the addition of surgical procedures to the list of covered surgical procedures, will have minimal effect on Medicare expenditures compared to the estimated level of Medicare expenditures in CY 2010.

6. Accounting Statement

As required by OMB Circular A–4 (available at *http://www.whitehousegov/omb/circulars/a004/a-4.pdf*), in Table 70 below, we have prepared an accounting statement showing the classification of the expenditures associated with the 0.2 percent update to the CY 2011 revised ASC payment system, based on the provisions of this final rule with comment period and the baseline spending estimates for ASCs in the FY 2011 President's Budget. This table provides our best estimate of Medicare payments to suppliers as a result of the update to the CY 2011 ASC payment system, as presented in this final rule with comment period. All expenditures are classified as transfers.

TABLE 70—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED TRANSFERS FROM CY 2010 TO CY 2011 AS A RESULT OF THE CY 2011 UPDATE TO THE REVISED ASC PAYMENT SYSTEM

Category	Transfers
Annualized Monetized Transfers.	$5.9 million.
From Whom to Whom.	Federal Government to Medicare Providers and Suppliers.
Total	$5.9 million.

D. Effect of Requirements for Hospitals' Reporting of Quality Data for Annual Hospital Payment Update

In section XVI. of the CY 2009 OPPS/ASC final rule with comment period (73 FR 68758), we discussed our requirements for subsection (d) hospitals to report quality data under the HOP QDRP in order to receive the full payment update for CY 2010. In section XVI. of the CY 2010 OPPS/ASC final rule with comment period (74 FR 60629), we discussed our requirements for subsection (d) hospitals to report quality data under the HOP QDRP in order to receive the full payment update for CY 2011. In section XVI. of this final rule with comment period, we established additional policies affecting

the HOP QDRP for CY 2012, CY 2013, and CY 2014. We estimate that about 90 hospitals may not receive the full payment update in CY 2011. Most of these hospitals receive little to no OPPS reimbursement on an annual basis. However, at this time, information is not available to determine the precise number of hospitals that do not meet the requirements for the full hospital market basket increase for CY 2011. We also estimate that 90 hospitals may not receive the full payment update in CY 2012. We are unable at this time to estimate the number of hospitals that may not receive the full payment update in CY 2013 and CY 2014.

In section XVI.E.3.a. of the CY 2010 OPPS/ASC final rule with comment period (74 FR 60647 through 60650), for the CY 2011 payment update, as part of the validation process, we are requiring hospitals to submit paper copies of requested medical records to a designated contractor within the required timeframe. Failure to submit requested documentation can result in a 2 percentage point reduction in a hospital's update, but the failure to attain a validation score threshold will not. Of the 90 hospitals that we estimate will not receive the full payment update for CY 2011, we estimate that no more than 20 hospitals will fail the validation documentation submission requirement for the CY 2011 payment update.

In section XVI.E.3.b. of the CY 2010 OPPS/ASC final rule with comment period, we did not, at that time, adopt our proposal in the CY 2010 OPPS/ASC proposed rule (74 FR 60650 through 60652) to expand the CY 2011 validation requirement for the CY 2012 payment update. Instead, we stated that we would consider the public comments we received on that proposal, as well as any analyses we conduct of the CY 2011 validation process, and propose a CY 2012 validation process as a part of the CY 2011 OPPS/ASC rulemaking. We stated that we believed that this approach would give HOP QDRP hospitals experience with the validation process and allow these hospitals sufficient time to prepare for the CY 2012 validation.

In this final rule with comment period, we have finalized our proposal to validate data submitted by 800 hospitals for purposes of the CY 2012 HOP QDRP payment determination. For CY 2011 and under our policy for CY 2012 in this final rule with comment period, we stated that we will conduct a measure level validation (we note, however, that the validation results will not affect the CY 2011 payment update) by assessing whether the measure data submitted by the hospital matches the independently reabstracted measure data. In addition, for the CY 2012 payment update in this final rule with comment period, we have decided to validate data for only 800 hospitals out of the approximately 3,200 HOP QDRP participating hospitals. We believe that this approach is suitable for HOP QDRP data because it will: Produce a more reliable estimate of whether a hospital's submitted data have been abstracted accurately; provide more statistically reliable estimates of the quality of care delivered in each selected hospital as well as at the national level; and reduce overall hospital burden because most hospitals will not be selected to undergo validation each year. We have adopted a threshold of 75 percent as the threshold for the validation score because we believe this level is reasonable for hospitals to achieve while still ensuring accuracy of the data. Additionally, this level is consistent with what we adopted in the Hospital Inpatient Quality Reporting Program (formerly referred to as the Reporting Hospital Quality Data for Annual Payment Update (RHQDAPU) program) (75 FR 50225 through 50229). As a result, we believe that the effect of our validation process for CY 2012 will be minimal in terms of the number of hospitals that will not meet all program requirements.

The validation requirement for CY 2011 of 7,300 requested cases and for CY 2012 of a maximum of 12 cases per hospital per quarter will result in medical record documentation for approximately 7,300 total cases and 9,600 cases per quarter, respectively, being submitted to a designated CMS contractor. We will pay for the cost of sending this medical record documentation to the designated CMS contractor at the rate of 12 cents per page for copying and approximately $1.00 per case for postage. We have found that, based on experience, an outpatient medical chart is up to 10 pages. Thus, as a result of validation requirements effective for the CY 2011 annual payment update and the CY 2012 annual payment update, respectively, we will have expenditures of approximately $8,760 total and $21,120 per quarter. Again, as we will pay for the data collection effort, we believe that a requirement for medical record documentation for 7,300 total cases for CY 2011 and a maximum of 12 cases per quarter for 800 hospitals for CY 2012 represent minimal burden to HOP QDRP-participating hospitals.

E. Executive Order 12866

In accordance with the provisions of Executive Order 12866, this final rule with comment period was reviewed by the Office of Management and Budget.

XXI. Final Rule: Changes Relating to Payments to Hospitals for Direct Graduate Medical Education (GME) and Indirect Medical Education (IME) Costs

A. Background

Section 1886(h) of the Act, as added by section 9202 of the Consolidated Omnibus Budget Reconciliation Act (COBRA) of 1985 (Pub. L. 99–272) and implemented in regulations at 42 CFR 413.75 through 413.83, establishes a methodology for determining payments to hospitals for the direct costs of approved graduate medical education (GME) programs. Section 1886(h)(2) of the Act sets forth a methodology for the determination of a hospital-specific base-period per resident amount (PRA) that is calculated by dividing a hospital's allowable direct costs of GME in a base period by its number of residents in the base period. The base period is, for most hospitals, the hospital's cost reporting period beginning in FY 1984 (that is, October 1, 1983 through September 30, 1984). The base year PRA is updated annually for inflation. In general, Medicare direct GME payments are calculated by multiplying the hospital's updated PRA by the weighted number of full-time equivalent (FTE) residents working in all areas of the hospital complex (and nonprovider sites, when applicable), and the hospital's Medicare share of total inpatient days.

Section 1886(d)(5)(B) of the Act provides for an additional payment amount under the hospital inpatient prospective payment system (IPPS) for hospitals that have residents in an approved GME program in order to reflect the higher indirect patient care costs of teaching hospitals relative to nonteaching hospitals. The regulations regarding the calculation of this additional payment, known as the indirect medical education (IME) adjustment, are located at 42 CFR 412.105.

The Balanced Budget Act of 1997 (Pub. L. 105–33) established a limit on the number of allopathic and osteopathic residents that a hospital may include in its FTE resident count for direct GME and IME payment purposes. Under section 1886(h)(4)(F) of the Act, for cost reporting periods beginning on or after October 1, 1997, a hospital's unweighted FTE count of residents for purposes of direct GME may not exceed the hospital's unweighted FTE count for its most recent cost reporting period ending on

or before December 31, 1996. Under section 1886(d)(5)(B)(v) of the Act, a similar limit on the FTE resident count for IME purposes is effective for discharges occurring on or after October 1, 1997.

The recently enacted Patient Protection and Affordable Care Act (Pub. L. 111–148), as amended by the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152) made a number of statutory changes relating to the determination of a hospital's FTE resident count for direct GME and IME payment purposes and the manner in which FTE resident limits are calculated and applied to hospitals under certain circumstances. (These two pieces of legislation are collectively referred to in this document as the "Affordable Care Act.") Below we summarize the proposals to implement the provisions of the Affordable Care Act relating to Medicare direct GME and IME payments that were included in the August 3, 2010 proposed rule (75 FR 46383) (as part of the CY 2011 OPPS/ASC proposed rule document), summarize the public comments we received, respond to those public comments, and set forth our final policy.

B. Counting Resident Time in Nonprovider Settings (Section 5504 of the Affordable Care Act)

1. Background and Changes Made by the Affordable Care Act

Effective July 1, 1987, the Social Security Act was amended to allow hospitals to count the time residents spend training in sites that are not part of the hospital (referred to as "nonprovider" or "nonhospital sites") for purposes of direct GME payments under certain conditions. Section 1886(h)(4)(A) of the Act (as added by section 9314 of the Omnibus Budget Reconciliation Act of 1986 (Pub. L. 99–509, also known as (OBRA '86) provides that the Secretary "shall establish rules consistent with this paragraph for the computation of the number of full-time equivalent residents in an approved medical residency training program." Specifically, section 1886(h)(4)(E) of the Act requires that the Secretary's rules concerning the computation of FTE residents for purposes of direct GME payments "provide that only time spent in activities relating to patient care shall be counted and that all the time so spent by a resident under an approved medical residency training program shall be counted towards the determination of full-time equivalency, without regard to the setting in which the activities are performed, if the hospital incurs all, or substantially all, of the costs for the training program in that setting" (as added by section 9314 of the Omnibus Budget Reconciliation Act of 1986 (Pub. L. 99–509) (OBRA 86)). Regulations implementing this provision were published in the September 29, 1989 final rule (54 FR 40292) at 42 CFR 413.86(f)(3) (now § 413.78(c)), which stated that a hospital may count the time residents spend in nonprovider settings for purposes of direct GME payment if: (1) The residents spend their time in patient care activities; and (2) there is a written agreement between the hospital and the nonprovider entity stating that the hospital will incur all or substantially all of the costs of the program. The regulations at that time defined "all or substantially all" of the costs to include the residents' compensation for the time spent at the nonprovider setting. Under section 1886(h)(4)(E) of the Act, only one single hospital was permitted to incur the costs of a particular training program and count the time residents spend training in a particular nonprovider setting.

Prior to October 1, 1997, for purposes of the IME payment adjustment, hospitals were not permitted to count the time residents spent training in nonprovider settings. However, section 4621(b)(2) of the Balanced Budget Act of 1997 (Pub. L. 105–33) revised section 1886(d)(5)(B) of the Act to allow providers to count time residents spend training in nonprovider sites for IME purposes, effective for discharges occurring on or after October 1, 1997. Specifically, section 1886(d)(5)(B)(iv) of the Act was amended to provide that "all the time spent by an intern or resident in patient care activities under an approved medical residency program at an entity in a nonprovider setting shall be counted towards the determination of full-time equivalency if the hospital incurs all, or substantially all, of the costs for the training program in that setting." In the July 31, 1998 final rule (63 FR 41005), at § 412.105(f)(1)(ii)(C) and § 413.86(f)(4), we specified the requirements that a hospital must meet in order to include the time spent by residents training in a nonprovider site in its FTE count for purposes of both direct GME and IME payments (we note that § 413.86(f)(4) is now redesignated as § 413.78(d)). In that final rule, we also redefined "all or substantially all of the costs for the training program in the nonprovider setting" as the residents' salaries and fringe benefits (including travel and lodging where applicable), and the portion of the cost of teaching physicians' salaries and fringe benefits that are attributable to GME.

Pursuant to the statutory authority in sections 1815(a), 1861(v)(1)(A), 1886(h)(3)(B), 1886(h)(4)(A), 1886(h)(4)(E), and 1886(k), and in order to implement section 1886(h)(4)(E) (and later, section 1886(d)(5)(B)(iv)) of the Act, and to assist contractors in determining whether a hospital incurred "all or substantially all" of the costs of the program in the nonprovider setting, we required under § 413.86(f)(3) and (f)(4) that there must be a written agreement between the hospital and the nonprovider site stating that the hospital will incur "all or substantially all" of the costs of training in the nonprovider setting (we note that § 413.86(f)(3) and (f)(4) are now redesignated as § 413.78(c) and (d), respectively). We later specified at § 413.78(d)(2) that the written agreement must indicate the amount of compensation provided by the hospital to the nonprovider site for supervisory teaching activities. We have explained the nature of and the rationale for the written agreement requirement and identified the statutory authority for the written agreement in considerable detail in the preamble to other rules (for example, 63 FR 40954, 40986 through 40989, 63 FR 40992 through 40994, and 63 FR 40996 (July 31, 1998); 68 FR 45346 (August 1, 2003); 69 FR 48916, 49179 through 49180 (August 11, 2004); and 72 FR 26870, 26969–26970 (May 11, 2007)). We have referred to this written agreement as a "written contract" (63 FR 40954, 40989 (July 31, 1998)). We have explained that the written agreement requirement was a useful and easily administered documentation requirement, an administrative tool, a payment safeguard which, among other things, allowed the Secretary to identify the costs of offsite training and to determine whether a hospital seeking Medicare reimbursement for the offsite training of residents (or some other entity) had paid all or substantially all costs of the offsite training. Among other things, the written agreement requirement allowed the Secretary to ensure that: (a) Two or more hospitals were not paid for the same costs of offsite training of residents; (b) the hospital seeking Medicare reimbursement for the offsite training of residents was not reimbursed for costs which a nonprovider site really had incurred; and (c) that the hospital seeking Medicare reimbursement for the offsite training of residents and a nonprovider setting were not both paid for costs of offsite training.

Section 713 of the Medicare Prescription Drug, Improvement, and

Modernization Act of 2003 (MMA) imposed a 1-year moratorium relating to certain nonprovider site teaching physician costs for the period from January 1, 2004, through December 31, 2004. During this 1-year period, we were required to allow hospitals to count FTE allopathic or osteopathic family practice residents training in nonprovider settings for IME and direct GME payment purposes without regard to the financial arrangement between the hospital and the teaching physician practicing in the nonprovider setting to which the resident was assigned. We instructed our Medicare contractors (then referred to as only "fiscal intermediaries" or "FIs") regarding the effect of section 713 of the MMA by stating that, when settling prior year cost reports during this 1-year period, or for family practice residents actually training in nonprovider settings during this 1-year period, contractors should allow hospitals to count allopathic and osteopathic family practice residents training in a nonprovider setting for direct GME and IME payment purposes without regard to the financial arrangement between the hospital and the nonprovider site pertaining to the teaching physicians' costs associated with the residency program. For additional information on this provision and for a summary of public comments we received and our responses related to this provision, we refer readers to the FY 2005 IPPS final rule (69 FR 49176, August 11, 2004).

In an effort to build in some flexibility and in an effort to respond to concerns expressed by hospitals about the administrative burden associated with meeting the written agreement requirements, the Secretary revised the written agreement rule to give hospitals more options. Specifically, in the FY 2005 IPPS final rule (69 FR 49179), we revised our regulations at § 413.78(e) to allow hospitals to choose to either enter into a written agreement with the nonprovider site before the hospital may begin to count residents training at the nonprovider site, or to pay concurrently for the cost of training at the nonprovider setting. That is, in the absence of a written agreement, hospitals are required to pay "all or substantially all" of the costs of the training program in the nonprovider setting by the end of the third month following the month in which the training occurs. While the FY 2005 final rule preamble language indicated that the Secretary had concluded that the written agreement was not the only way for the agency to ensure that a given hospital was complying with the statute's "all or substantially all" of the cost requirement, it also indicated that it was and had been a sensible means of doing so (69 FR 48916, 49179, Aug. 11, 2004).

On May 11, 2007, we published changes in the IPPS final rule (72 FR 26949) that once again modified the definition of "all or substantially all of the costs for the training program in the nonprovider setting." That final rule further defined "all or substantially all" under § 413.75(b) to mean at least 90 percent of the total costs of the residents' salaries and fringe benefits (including travel and lodging where applicable) and the portion of the cost of the teaching physician's salaries attributable to GME. Although some public commenters had objected to our proposed redefinition of the "all or substantially all," we adopted the 90 percent rule because we believed it would substantially address concerns that had been voiced previously by the industry. With this modification, hospitals were no longer required to pay 100 percent of the residents' salaries and fringe benefits (including travel and lodging where applicable) and the portion of the teaching physicians' costs attributable to GME at the nonprovider site. This change in policy also allowed providers to use an alternative, less burdensome method to calculate the GME teaching physicians' costs attributable to direct GME at nonprovider sites. In addition to the redefinition of "all or substantially all of the costs," the May 11, 2007 final rule modified the regulation text at § 413.78(f)(3)(ii) to clarify that the required written agreement between a hospital and a nonprovider site must be in place before residents begin training at the nonprovider site. That final rule also specified the information that must be included in the written agreement, and stated that the amounts specified in the written agreement may be modified by June 30 of the applicable academic year.

Section 5504(a) of the Affordable Care Act made changes to section 1886(h)(4)(E) of the Act to reduce the costs that hospitals must incur for residents training in nonprovider sites in order to count the FTE residents for purposes of Medicare direct GME payments. Specifically, section 5504(a) amended the statute to allow a hospital to count all the time that a resident trains in activities related to patient care in a nonprovider site so long as the hospital incurs the costs of the residents' salaries and fringe benefits for the time that the resident spends training in the nonprovider site. Section 5504(b) of the Affordable Care Act made similar changes to section 1886(d)(5)(B)(iv) of the Act for IME payment purposes. For direct GME payments, the provision is effective for cost reporting periods beginning on or after July 1, 2010; for IME payments, the provision is effective for discharges occurring on or after July 1, 2010. The changes made by section 5504(a) and (b) of the Affordable Care Act also specify that if more than one hospital incurs the residency training costs in a nonprovider setting, those hospitals are to count a proportional share of the training time as determined by written agreement between the hospitals. In addition, section 5504(a) amended section 1886(h)(4)(E) of the Act to require hospitals to maintain documents indicating the amount of time the residents they are claiming spend training in nonprovider sites relative to a base year that the Secretary will specify, and to make those documents available to the Secretary.

Section 5504(c) of the Affordable Care Act specifies that the amendments made by the provisions of sections 5504(a) and (b) shall not be applied in a manner that would require the reopening of settled cost reports, for which there is not a jurisdictionally proper appeal pending on the issue of direct GME or IME payments as of March 23, 2010 (the date of the enactment of Pub. L. 111–148). In the August 3, 2010 proposed rule (75 FR 46385), we proposed to interpret "pending, jurisdictionally proper appeal on direct GME or IME payments" to mean that in order for a hospital to request a change to its FTE count, for direct GME or IME, the "pending, jurisdictionally proper appeal" must be specific to direct GME or IME, respectively.

Comment: One commenter asked that CMS clarify the definition of a nonprovider site. The commenter specifically asked whether the term "nonprovider site" would apply to a situation in which residents in a family practice program rotate to a physician's office but accompany the doctor to a separate, nonteaching hospital. Another commenter requested that CMS clarify the definitions of nonprovider and hospital-based settings to state that hospital-based settings can include a variety of ambulatory experiences.

Response: A "nonprovider site" is a setting that does not qualify as a provider-based facility or organization in accordance with the criteria in the regulations at 42 CFR 413.65. In addition, the regulations at 42 CFR 413.78(b) state that "a hospital cannot claim the time spent by residents at another hospital." Therefore, in the example given by the first commenter,

the hospital where the resident usually trains in his or her family practice program cannot count the time that the resident spends rotating with a physician to another hospital. We do not believe that the regulations need to be revised to include a separate definition of a "nonprovider site" as it applies to this provision.

Comment: Many commenters disagreed with our interpretation of the application provisions of section 5504(c) of the Affordable Care Act. The commenters believed that the statute clearly allows hospitals to reopen cost reports that have a jurisdictionally proper pending appeal as of March 23, 2010, regardless of whether or not the issue under appeal is specifically related to direct GME or IME payments. Because many of the GME provisions in the Affordable Care Act apply retroactively (for example, the provisions regarding didactic time in section 5505), the commenters believed that CMS should not place additional restrictions on a hospital's ability to appeal. Another commenter suggested that CMS allow providers to reopen cost reports for an Affordable Care Act issue on direct GME or IME as long as the hospital has a jurisdictionally proper appeal pending for either an IME or direct GME issue.

Another commenter stated that it generally considers an IME appeal issue to be specific to the aspect of IME that the provider is contesting. Therefore, the commenter suggested that an allowable appeal under section 5504 be limited to appeals in which the provider contests issues covered by section 5504, and not direct GME or IME on an overall basis.

One commenter asked whether the provisions of section 5504 could be applied to open cost reports for which no Notice of Program Reimbursement (NPR) has been issued, and which, therefore, does not have any jurisdictionally proper appeals pending.

Another commenter claimed that the application provisions of section 5504(c) clearly apply the provisions of sections 5504(a) and (b) to cost reporting periods occurring before July 1, 2011 [sic]. The commenter asserted that because section 5504(c) expressly states that the provisions of this section "shall not be applied in a manner that requires reopening of any settled hospital cost reports as to which there is not a jurisdictionally proper appeal pending" as of March 23, 2010, such nonprovider site training time should be allowed for those cost reports, even though the provisions of sections 5504(a) are only effective as of July 1, 2010.

Response: There appears to be a misreading of our interpretation of section 5504(c). The effective date of the provisions of section 5504 is clearly July 1, 2010. This date is unambiguously stated in the plain text of section 5504(a), which states that it is "effective for cost reporting periods beginning on or after July 1, 2010." Similarly, section 5504(b) is "effective for discharges occurring on or after July 1, 2010." Our discussion of section 5504(c) in the August 3, 2010 proposed rule (75 FR 46385) only intended to explain our interpretation of the phrase "a jurisdictionally proper appeal pending" in the context of the plain language of the statute. However, we are clarifying in this final rule that, as noted above, and unlike some other provisions of the Affordable Care Act, section 5504 is fully prospective, with an explicit effective date of July 1, 2010, for the new standards it creates. Nothing in section 5504(c) overrides that effective date. Section 5504(c) merely notes that the usual discretionary authority of Medicare contractors to reopen cost reports is not changed by the provisions of section 5504; it simply makes clear that Medicare contractors are not required by reason of section 5504 to reopen any settled cost report as to which a provider does not have a jurisdictionally proper appeal pending. It does not require reopening in any circumstance; and the new substantive standard is, in any event, explicitly prospective. We believe if Congress had wanted to require such action or to apply the new standards to cost years or discharges prior to July 1, 2010, it would have done so in far more explicit terms.

2. Elimination of the "All or Substantially All of the Costs for the Training Program in the Nonprovider Setting" Requirement and New Cost Requirements for Hospitals

As stated earlier, in the May 11, 2007 final rule (72 FR 26949), we redefined the phrase "all or substantially all of the costs for the training program in the nonprovider setting" under § 413.75(b) of the regulations to mean at least 90 percent of the total costs of the residents' salaries and fringe benefits (including travel and lodging where applicable) and the portion of the cost of the teaching physicians' salaries attributable to nonpatient care direct GME. However, section 5504 of the Affordable Care Act revised the Act, effective on July 1, 2010, and eliminated the requirement that a hospital incur "all or substantially all of the costs for the training program in the nonprovider setting." Under the changes made by section 5504, hospitals are only required to incur the costs of the resident's salaries and fringe benefits during the time the resident spends in the nonprovider setting, and they no longer have to incur other training costs in the nonprovider site in order to count such time for direct GME and IME purposes.

In the August 3, 2010 proposed rule (75 FR 46385), we proposed to revise the regulation at § 413.75(b) accordingly to conform to these new statutory requirements. Specifically, we proposed to revise the existing definition of "all or substantially all of the costs for the training program in the nonprovider setting" to be effective for cost reporting periods beginning on or after July 1, 2007, and before July 1, 2010. We also proposed to add a new § 413.78(g) that details how hospitals should count residents that train in nonprovider sites for cost reporting periods beginning on or after July 1, 2010. Specifically, we proposed to require under § 413.78(g)(2) that a hospital or hospitals must incur the costs of the salaries and fringe benefits of the resident during the time the resident spends in the nonprovider setting in order to count that time for direct GME payment purposes. We also proposed to revise § 412.105(f) to reflect these changes for the purposes of IME payments.

Comment: Many commenters supported the proposed changes to the regulations to reflect the provisions of section 5504 of the Affordable Care Act. Some commenters remarked that these changes vastly simplify the recordkeeping required of hospitals to follow the regulations, which will allow hospitals to focus on providing quality care and medical education. Similarly, other commenters noted that the proposed regulations removed hospitals' administrative burden of calculating teaching physician costs at nonprovider sites. The commenters also applauded the proposed changes because they reflect encouragement of resident training in nonprovider settings.

Response: We appreciate this positive feedback from commenters.

Comment: One commenter stated that it is clear that the revisions to the existing definition of "all or substantially all of the costs for the training program in the nonprovider setting" would be applicable to cost reporting periods beginning on or after July 1, 2007 and before July 1, 2010, but that it is not clear how years prior to July 1, 2007 should be handled. The commenter maintained that the Medicare contractors should be instructed to apply these rules to all open cost report years.

Response: The proposed changes to the definition of "all or substantially all of the costs for the training program in the nonprovider setting" are effective for cost reporting periods beginning on or after July 1, 2010 for direct GME and for discharges occurring on or after July 1, 2010 for IME. We did not propose any changes to the definition of "all or substantially all of the costs for the training program in the nonprovider setting" for cost reporting periods beginning before July 1, 2010 or for discharges occurring before July 1, 2010. Medicare contractors will continue to treat nonprovider site training time prior to July 1, 2010 as they were required to under the regulations in effect prior to July 1, 2010.

After consideration of the public comments we received, we are finalizing our proposed changes to the regulations at § 413.75(b), § 413.78(f)(1), § 413.78(g), and § 412.105(f)(1)(iii) regarding new cost requirement for hospitals without modification.

3. Revision to Regulations To Allow More Than One Hospital To Incur the Costs of Training Programs at Nonprovider Settings, Either Directly or Through a Third Party

As indicated above, prior to the enactment of the Affordable Care Act, section 1886(h)(4)(E) of the Act (regarding direct GME) and section 1886(d)(5)(B)(iv) of the Act (regarding IME) allowed a hospital to count the time spent by residents training in a nonprovider site only when one single hospital incurred the costs of a particular training program in a particular nonprovider setting. We note that both sections of the statute specified that a hospital could count the time spent by residents training in a nonprovider site "if *the hospital* incurs all or substantially all of the costs for the training program in *that* setting" (emphasis added). While we understand that, in some cases, hospitals share the costs of training residents in a specific program at the same nonprovider site, we have historically only allowed one hospital to count time spent by those residents at a nonprovider site if that single hospital met the requirement to incur "all or substantially all" of the training program costs at the nonprovider site. Accordingly, two or more hospitals could not count the time spent by residents in a specific program training at a nonprovider site if they shared the training costs at the site or if a third party incurred the costs of training at a nonprovider site on behalf of several hospitals. Examples of third parties that might incur nonprovider site training program costs are a medical or dental school, or a GME administrative entity that is established to operate the GME program.

Sections 5504(a) and (b) of the Affordable Care Act specifically address the situation in which more than one hospital incurs the costs of training programs at nonprovider settings, either directly or through a third party. Sections 5504(a) and (b) amended sections 1886(h)(4)(E) and 1886(d)(5)(B)(iv) of the Act, respectively, to provide that when more than one hospital incur these costs, either directly or through a third party, those hospitals "shall count a proportional share of the time, as determined by written agreement between the hospitals, that a resident spends training in that setting." Therefore, these statutory changes now allow hospitals to share the costs of resident training at nonprovider sites, so long as those hospitals divide the resident time proportionally in accordance with a written agreement, for the purposes of determining their respective direct GME and IME FTE resident counts at the nonprovider site. These provisions of the statute are effective for cost reporting periods beginning on or after July 1, 2010, for direct GME, and for discharges occurring on or after July 1, 2010, for IME. Accordingly, although hospitals that shared training costs at nonprovider sites could not count any of resident time spent training at those nonprovider sites prior to July 1, 2010, hospitals can count that training time beginning on or after July 1, 2010, as long as they divide the resident training time proportionally and record that proportion in a written agreement.

In the August 3, 2010 proposed rule (75 FR 46385 through 46387), we proposed to revise our regulations to reflect the statutory provision that allows hospitals to proportionally share the costs of resident training at nonprovider sites under a new paragraph (g)(2) of § 413.78 for direct GME and to make a conforming cross-reference change under § 412.105(f)(1)(ii)(E) of the IME regulations. While the statute allows hospitals to determine by a written agreement the proportional share of time that residents spend training in the nonprovider site, we proposed that hospitals must use a reasonable basis for establishing that proportion (proposed § 413.78(g)(2)(ii), final § 413.78(g)(2)(i)). One such reasonable basis could be that each hospital counts the number of FTEs for which it incurs the salaries and fringe benefits. For example, if there are 10 FTEs training in a nonprovider setting in a particular program, and there are 2 hospitals that each incur the costs of the salaries and fringe benefits of 5 of those FTEs, each hospital could agree to count 50 percent of the FTEs (even if each hospital is not necessarily paying 50 percent of the cost, due to differences in resident salary amounts, this arrangement is acceptable, so long as 100 percent of the required cost is paid).

In addition to having a reasonable basis for establishing the proportion, hospitals must be able to document the amount that they are paying, and this amount must equate to *at least* the sum of all the salaries and fringe benefits of the residents for the amount of time that the residents are training in that site. The salaries and fringe benefits of the residents will vary depending upon the program year of the residents, and the specialty in which they are training. As we indicated in the May 11, 2007 final rule (72 FR 26961), hospitals must "take into account the actual salary and fringe benefits for each FTE resident that trains in the nonprovider site, which may vary by resident." Therefore, as also indicated in the May 11, 2007 final rule (72 FR 26970), global agreements that cover a variety of issues (GME and non-GME) between the hospital(s) and the nonprovider site, and that only specify a lump sum payment amount with no break out of the residents' salaries and fringe benefits, do not provide sufficient information for the Medicare contractor to determine that "all or substantially all" of the costs (or, effective July 1, 2010, that all of the residents' salaries and fringe benefits) have been paid by the hospitals. Accordingly, we would expect that, regardless of whether there is one hospital paying the cost, or more than one hospital is sharing the costs, hospitals would need to determine prior to the start of nonprovider rotations (with allowance for modification by June 30 of that academic year) the total cost of the salaries and fringe benefits of the residents that are training for the proportion of the year spent in each nonprovider site. Of course, in the instance where the residents remain on the payroll of one or more hospitals for the entire year, it would be easier to document that the hospital(s) continues to pay the residents' salaries and fringe benefits when the residents rotate to nonprovider sites. Similarly, where the residents are on the payroll of the medical or dental school, or of a third party GME administrative entity, and the hospitals reimburse the school or the third party for the *entire* salary and fringe benefit costs of the residents, for both hospital and nonprovider training, the hospitals could easily document that

they have incurred the requisite costs of training in nonprovider sites. However, once the total costs for the residents' salaries and fringe benefits for time spent in the nonprovider site are determined and covered by the hospitals, the hospitals may decide among themselves the proportion of those costs each will incur, and may use a reasonable basis to allocate among themselves the proportion of FTE residents that each one will count, as discussed above.

As specified in section 5504 of the Affordable Care Act, in the August 3, 2010 proposed rule (75 FR 46386), we proposed that hospitals must record the proportion of the FTE resident time spent training in the nonprovider site that will be counted by each hospital for purposes of IME and direct GME payment, as well as the reasonable basis for the proportion, in a written agreement between the hospitals. We proposed to add this requirement in regulations at § 413.78(g)(2). If hospitals have in place written agreements with the nonprovider site in accordance with our existing regulations at § 413.78(f)(3)(ii), we proposed that the proportion of the FTE resident training time to be counted for IME and direct GME purposes by each hospital, and the basis for the proportion, may be recorded in that agreement (proposed § 413.78(g)(2)(iii)). We proposed that if the hospitals choose to pay the training program costs concurrently as described in § 413.78(g)(3)(i), that is, without a written agreement, the hospitals must still agree in writing to the proportion of costs and training time they plan to incur and count (proposed § 413.78(g)(2)(iv), final § 413.78(g)(2)(iii)) in addition to the basis for that proportion, before the end of the applicable training year. That written agreement between the hospitals must be available for CMS review and for auditing purposes. In addition, we indicated that we would expect that the hospitals' records of resident training time and training costs at nonprovider sites, as required by the Affordable Care Act and as discussed below, reflect the proportions of training time and costs as agreed upon and documented in whichever type of written agreement the hospitals used to record the proportional shares of resident training time that each will count for purposes of direct GME and IME payment.

Comment: One commenter supported the proposed changes regarding allowing hospitals to share the costs of training residents at nonprovider sites.

Response: We appreciate the commenter's support.

Comment: Several commenters requested that CMS detail the documentation requirements in cases where a third party incurs the costs of training at a nonprovider site on behalf of several hospitals, where hospitals have a global agreement with that third party, and when a hospital pays a nonprovider site concurrently. Many commenters stated that they did not believe that resident compensation costs must be itemized in order for a hospital to receive the Medicare payments to which it is entitled.

A large number of these commenters noted that hospitals that pay residents salaries and fringe benefits through global agreements and that do not use an invoice system to track costs, may find it "unduly burdensome" to change their internal accounting practices in order to produce the proper documentation to comply with this proposed regulation. Some of those commenters suggested that, instead, a "memorandum of understanding" between a hospital and a third party be sufficient for documentation of the sharing of costs between the two entities. They suggested that this memorandum would be effective at the beginning of a hospital's fiscal year, and it would project the expected amount of resident compensation for the year. Further, they suggested that the memorandum would be followed by a year-end reconciliation of costs. The commenters concluded by stating that all hospitals would benefit from clear instructions regarding these documentation requirements. Other commenters suggested that CMS clarify that as long as the hospital provides documentation that "(1) it is compensating the third-party an amount that is at least equal to the aggregate of the salary and fringes for the resident full-time equivalents (FTEs) training at a nonprovider site, and (2) the amount paid to the third-party is identified in the global agreement as being for that purpose," this documentation would be sufficient for the hospital to demonstrate that it is incurring the costs of training those resident FTEs at the nonprovider setting. Another commenter believed that identifying the FTE count at nonprovider sites should be sufficient for these documentation requirements. Other commenters suggested that as long as all of the hospitals that share the residents' time are funding 100 percent of the resident stipends and benefits in the aggregate, and they are not claiming more than 100 percent of the residents' time, CMS permit hospitals to determine for themselves when and how to allocate resident time spent in nonprovider sites.

Response: In order to effectively implement and ensure compliance with section 5504, we must require that the written agreement between a hospital and a third party that incurs the costs of training at a nonprovider site contain information that clearly documents that the hospital is incurring the costs of the residents' salaries and fringe benefits at each nonprovider site. If the third party that pays the residents' salaries and fringe benefits also owns some or all of the nonprovider sites to which the residents rotate, one master agreement with the third party is sufficient, so long as the number of FTEs and dollar amount for total costs incurred for those FTEs is specified in the master agreement for each program at each nonprovider site.

Similar documentation requirements exist in situations in which two hospitals share the costs of training residents at a nonprovider site. If two hospitals share the costs of training residents in a given program at the same nonprovider site, the hospitals must be able to document together that they paid the salaries and fringe benefits of all the residents in that program for the time spent training at that nonprovider site, and they also must explain in a written agreement the arrangement for dividing the costs and FTEs. For each nonprovider site in which the hospital wishes to claim the FTEs for IME and direct GME, a hospital must include in the written agreement (or document, if it is paying concurrently)—

(1) The *total* number of FTE residents in *each* program at *each* nonprovider site (if the hospital is sharing the costs of the residents' salaries and fringe benefits with another hospital(s), each hospital would specify the number of FTEs in each program at each site for which they are paying the salaries and fringe benefits); and

(2) The total dollar amount the hospital is paying for all those FTE residents at each nonprovider site respectively. The hospital need not list the program years and the individual salaries and benefits for each FTE in each program year for each program, but the hospital would be expected to supply such information at audit so that the Medicare contractor could replicate how the hospital arrived at the total dollar amount included in the written agreement (and paid by the hospital). In addition, the hospital must include all this information regardless of whether the agreement is directly between it and the nonprovider site, or if the agreement involves a third party.

Comment: Several commenters contended that it is impractical and burdensome to require hospitals to identify the costs of training residents at nonprovider sites prior to the start of nonprovider site rotations on July 1 of an academic year. One commenter maintained that such costs can only be calculated after June 30 of an academic year. The commenter explained that because residents rotating at nonprovider sites often retain some responsibilities at a hospital, and that those residents' rotations between both sites varies from day to day, an accounting of nonprovider site training time must occur retrospectively.

Response: We believe that hospitals should have a general sense of the salary and fringe benefit costs of the residents that will be training at nonprovider sites before the start of an academic year. Salary and fringe benefit costs for each specialty and program year are usually fixed before the start of an academic year, and the only variable that could reasonably change after the start of resident rotations would be the exact number of FTEs rotating to nonprovider sites. If residents' rotation assignments are governed by program directors at the medical school and not by the hospital itself, the hospital should be able to retrieve this information from the medical school.

Written agreements can be amended by the end of the academic year on June 30 to account for such rotation changes, as specified in the new § 413.78(g)(3)(ii). Hospitals also can opt to pay nonprovider sites concurrently according to the new § 413.78(g)(2)(iii), in which case no written agreement regarding the payment of resident salaries and fringe benefits is required. (We note that in a case where multiple hospitals pay the nonprovider site concurrently, a written agreement is still required to document the reasonable basis upon which those multiple hospitals divide the payment of resident salaries and fringe benefits to the nonprovider site.)

Comment: A number of commenters encouraged CMS to clearly state that section 5504 not only allows hospitals that share the cost of nonprovider site training to "*count a proportional share of the time*" of that training, but that it also allows hospitals to adjust their direct GME and IME caps accordingly.

Other commenters noted that hospitals that already train above their cap would have no incentive to increase their residents' nonprovider site training under this provision because they would not be able to claim the additional time if the total count of nonprovider site training time is less than the amount the hospital is over its cap.

A number of commenters who generally addressed the current system of Medicare GME payment called for reforms in the system and advocated targeted, if not wholesale, lifting of the FTE caps. However, the commenters noted that such measures would require Congressional legislation, and they acknowledged that CMS cannot implement such changes through rulemaking. Rather, the commenters encouraged CMS to work with Congress toward lifting the cap as soon as possible.

Response: We appreciate the comments on the Medicare GME payment system in general. With regard to the request for cap increases under the provisions of section 5504, hospitals cannot adjust their caps to reflect the additional FTE time that is allowable under section 5504. Rather, a hospital is permitted to count that additional FTE time within the limits of its direct GME and IME caps. While hospitals that already train over their respective FTE caps may not have a clear financial incentive to increase nonprovider site training time under this provision, the easing of other nonprovider training requirements under section 5504 can still facilitate an increase in nonprovider site training from those hospitals.

Comment: Some commenters requested that CMS refrain from disallowing resident time spent in shared nonprovider site rotations prior to July 1, 2010. The commenters claimed that disallowing resident training time in nonprovider settings harms our national health interests and violates the spirit of the Affordable Care Act. The commenters believed that CMS has the authority to refrain from enforcing its previous policy on counting shared nonprovider site training time.

Response: The statute does not provide CMS discretion to allow the counting of resident time spent in shared nonprovider site rotations for cost reporting periods beginning prior to July 1, 2010. Section 5504 explicitly provides that a hospital may count shared nonprovider site rotation time to cost reporting periods beginning on or after July 1, 2010, for direct GME, and for discharges occurring on or after July 1, 2010, for IME, if a hospital incurs certain costs.

After consideration of the public comments we received, we are finalizing our proposed revisions of the regulations at §§ 413.78(g)(2) and (g)(3) to allow more than one hospital to incur the costs of nonprovider site training programs, either directly or through a third party.

4. Changes to Regulations Regarding Recordkeeping and Comparison to a Base Year

As stated above, section 5504(a) of the Affordable Care Act requires hospitals to maintain records of the amount of time that the residents they are claiming spend in nonprovider settings, and to compare that time to the time spent by the residents in nonprovider sites in a base year as the Secretary may specify. This requirement is effective for cost reporting periods beginning on or after July 1, 2010. In the August 3, 2010 proposed rule (75 FR 46387), we proposed to incorporate this statutory requirement for maintaining records under a new paragraph (g)(5) of § 413.78 of the regulations. We also stated that we anticipated amending the cost report for hospitals to include lines where hospitals can submit the required data, which is described below. These data will help CMS identify whether barriers to resident training in nonprovider sites exist. The original allowance of IME payments for training in nonprovider sites, as instituted by the BBA, was intended to act as an incentive to hospitals to increase such training. However, we have not seen a marked increase in the amount of training that occurs in nonprovider settings in the years since the implementation of the BBA. Advocates of expanding training in nonprovider sites have alleged that CMS' rules for counting residents in nonprovider sites regarding teaching physician salary costs were an obstacle to the expansion of training in nonprovider settings. The recordkeeping and reporting requirement added by section 5504(a) of the Affordable Care Act will provide the Secretary information to assess whether nonprovider site resident training increases as a result of the statutory revision of rules that were viewed as burdensome.

We understand that rotation schedules are a primary source of information that hospitals supply to Medicare contractors for determining where and for how much time each resident spends training in each hospital or nonprovider site. Therefore, in the August 3, 2010 proposed rule (75 FR 46387), we proposed that rotation schedules be the source for establishing the amount of time that residents spend training in nonprovider sites, both in the base year and in subsequent years. The amendment to section 1886(h)(4)(E) of the Act by section 5504(a) of the Affordable Care Act states that the Secretary shall specify the

aforementioned base year for the level of training at nonprovider sites. We proposed that cost reporting periods beginning on or after July 1, 2009 and before June 30, 2010 be the base year against which we will compare subsequent years' data to determine if the level of nonprovider training that occurs in subsequent years increases relative to that base year (proposed new § 413.78(g)(5)).

Section 5504(a) of the Affordable Care Act also made changes to require that these records be made available to the Secretary. In order for CMS to evaluate whether nonprovider site training has increased as a result of the changes made by section 5504 of the Affordable Care Act, in the August 3, 2010 proposed rule (75 FR 46387), we proposed to include several additional cost report lines for hospitals to submit data for each of their primary care programs on a program-specific basis. With respect to hospitals' nonprimary care programs, hospitals would only need to supply that data on an overall hospital basis, and we proposed to add one line on the cost report for hospitals to submit that data. We proposed to only require program-specific data with respect to resident training time in nonprovider sites for primary care specialties because we believe that that is sufficient for the intent of this provision. The intent of this recordkeeping requirement is to see whether, as a result of the policy changes required under section 5504(a) of the Affordable Care Act, there is an increase in the volume of residency training that takes place in nonprovider settings. Because residents at nonprovider sites typically train in primary care specialties, and in order to minimize the documentation burden on hospitals, we stated that we did not believe it is necessary to require program-specific data for other specialties that would provide only marginally useful information. For the purposes of this provision, we proposed to use the definition of primary care resident in § 413.75(b) to identify those programs for which we proposed to require program-specific data.

Once this information is made available to CMS, the data would be compared to the analogous data from the base year of cost reporting periods beginning on or after July 1, 2009 and before June 30, 2010 to determine whether the volume of nonprovider site training has increased. Specifically, we proposed to use the total unweighted direct GME count of FTE training time in a primary care specialty in nonprovider sites (prior to application of direct GME FTE resident limits) as the gauge to determine if residency training time in nonprovider settings in that specialty has increased in an academic year relative to the base year. Therefore, we proposed that hospitals would only be required to submit the respective unweighted direct GME FTE counts on the new cost report lines for each primary care specialty and for nonprimary care specialties on an overall basis. For example, if, in the base year, we find that 3.75 direct GME FTEs out of a total of 15 FTE family practice residents from a family practice residency program in a teaching hospital trained in nonprovider settings (that is, 25 percent of the FTE time of the residents in the family practice residency program was spent training in nonprovider sites), we would note the subsequent years' amount of direct GME FTE training time in nonprovider sites in that particular teaching program to see if that FTE proportion increased from 25 percent. This would help determine if more training time is spent by primary care residents in nonprovider sites. Or, for all of the nonprimary care teaching programs in a hospital, if 100 direct GME FTE residents out of 400 FTE residents spent time training in nonprovider settings (that is, 25 percent of the time spent by residents in the nonprimary care programs is spent training in nonprovider sites), we would look to see if, in subsequent years, more than 25 percent of the time spent by nonprimary care direct GME FTEs from that hospital is spent training in nonprovider sites.

Comment: One commenter recommended that CMS specify that the primary sources of information that hospitals supply to Medicare contractors for determining where and for how much time each resident spends training in each hospital or nonprovider site include not only rotation schedules, but also "other similar documentation normally maintained by the hospital," because some hospitals use alternative standards for documenting resident rotations to nonprovider sites.

Response: The rotation schedules prepared by the program directors are the primary source of information regarding the residents' assignments because they contain a snapshot of each resident's rotations to multiple sites (that is, different hospitals as well as nonprovider sites). Therefore, this information often allows the Medicare contractors to determine whether more than one hospital is including the same rotation in its GME and/or IME FTE count. In rare and extenuating circumstances where the rotation schedules are not available, the hospital should upon request, furnish the Medicare contractor with similar documentation that is official (that is, is based on the approval of the program director), that is similar for all hospitals to which the residents in the program rotate, and that is auditable. We note that such alternative documentation must be contemporaneous to the academic year in which the rotations occur.

Comment: Several commenters remarked that the data that CMS proposed to collect under the recordkeeping requirement of section 5504 will not provide a full and complete portrayal of the amount of time that residents spend training in nonprovider sites. The commenters gave numerous possible reasons for a decrease in a hospital's nonprovider setting training time from year to year that would not be related to a hospital's GME policy decisions. Those reasons include a greater or lesser ability of the hospitals to match residents into a particular program and residents' leaves of absence within a particular program. The commenters also explained that ambulatory care training can occur in provider-based settings, VA hospitals, and military clinics, in addition to nonprovider sites, but according to the proposed recordkeeping requirements, such time would not be included in the data either. The commenters requested that CMS enumerate the limitations of the data that will be collected under this statutory requirement, so that the public and other policymakers understand why the amount of nonprovider site training for a particular hospital may vary from one year to the next.

Response: Section 5504 requires CMS to collect the nonprovider site training data that is affected under this provision. We do not agree that the data that we are requesting for the purposes of this provision naturally fluctuates, even if residents leave training programs for reasons that bear little or no connection to a hospital's GME policy decisions. The data we are collecting will determine the percentage of time spent in nonprovider site training. We will analyze the data in order to determine whether CMS' former rules regarding teaching physician salary costs for counting residents in nonprovider sites were truly an obstacle to the expansion of training in nonprovider settings, as was claimed by advocates of such expanded training. We also remind providers that the use and evaluation of this data collection will have no direct implications for Medicare GME payments.

Comment: Numerous commenters believed that the proposal to add lines to the cost report for the purposes of this

recordkeeping requirement was an added administrative burden to hospitals, as was the proposal to require such cost report data on a program-by-program basis for primary care specialties. The commenters claimed that the statute merely requires hospitals to "maintain and make available to the Secretary" records on resident training time in nonprovider sites, and the proposed regulations greatly complicated this requirement. The commenters believed that the intent of section 5504 was to simplify the already burdensome resident reporting requirements on hospitals.

Some commenters suggested that CMS instead interpret section 5504 as only requiring hospitals to have these records and make them available on an as-needed basis. The commenters noted that, if CMS decides to finalize the policy to add lines to the cost report for the purposes of this section 5504 requirement, CMS limit the additional lines to two: one line for primary care data and one line for nonprimary data.

Response: We believe that the addition of a few cost report lines for the purposes of this recordkeeping requirement does not pose an undue burden on hospitals. The data that we are requesting are already collected by hospitals for other GME purposes, and hospitals should not experience an added burden from the requirement to enter that information in the cost report. The Affordable Care Act gave CMS explicit authority to require that this recordkeeping data be maintained and made available, and the most direct method of making such data available to Medicare contractors is by reporting it on the Medicare cost report. Therefore, we are finalizing this policy as proposed.

Comment: One commenter suggested that CMS change the base year that it will use to determine if nonprovider site rotations are increasing to cost reporting periods beginning on or after July 1, 2010 and before June 30, 2011. The commenter stated that providers who are currently unable to claim time spent at nonprovider settings, due to the administrative requirements in place now, would not be claiming them on the cost report until the 2010–2011 academic year. Therefore, the commenter stated, an analysis of nonprovider site training time using the current proposed base year would indicate a greater increase in such rotations than might actually exist.

Response: We chose the base year of cost reporting periods beginning on or after July 1, 2009 and before June 30, 2010 because it is the last year before the effective date of the provisions of section 5504. Accordingly, we believe that the base year that we proposed will best serve our goal of determining whether nonprovider site training actually increased as a result of the provisions of section 5504. Therefore, we are finalizing the base year as proposed.

Comment: One commenter expressed support for the proposal to track resident training time in nonprovider sites and requested that CMS clearly report the findings of its analysis of the nonprovider site training data. The commenter also requested that CMS enumerate the various factors that influence training in nonprovider sites when it reports the findings.

Response: The statute does not require CMS to report any findings that result from this data collection. Therefore, we are not currently planning to officially report any such findings.

Comment: Some commenters requested that CMS change the definition of primary care to replace the outdated term "osteopathic general practice" with the term "traditional rotating internship" at section 1886(h)(5)(H) of the Act.

Response: We do not have the authority to change the statutory definition of "primary care resident" at section 1886(h)(5)(H) of the Act.

After consideration of the public comments we received, we are finalizing our changes to the regulations at § 413.78(g)(5) regarding recordkeeping and comparison to a base year as proposed.

C. Counting Resident Time for Didactic and Scholarly Activities and Other Activities (Section 5505 of the Affordable Care Act)

1. Background and Changes Made by the Affordable Care Act

Prior to the enactment of the Affordable Care Act, only the time that residents spent training at a nonprovider setting in patient care activities, as part of an approved program, could be included in a hospital's direct GME or IME FTE resident count. There were also differences in the rules for counting FTE resident time during the time that residents spend training in the hospital for direct GME and IME payments. For direct GME payment purposes, under 42 CFR 413.78(a), "residents in an approved program working in all areas of the hospital complex may be counted." As explained in the September 29, 1989 **Federal Register** (54 FR 40286), the hospital complex consists of the hospital and the hospital-based providers and subproviders. Therefore, a hospital need not distinguish between patient care activities and nonpatient care activities when determining its direct GME count when the residents are training in the hospital complex. However, for IME payment purposes, consistent with the regulations at 42 CFR 413.9 and 412.105(f)(1)(ii) only time spent in patient care activities in the portion of the hospital subject to the hospital inpatient prospective payment system and the outpatient department of a hospital is counted. As stated in the FY 2002 IPPS final rule, it has been our longstanding policy that, regardless of the site of training, "we do not include residents in the IME count to the extent that the residents are not involved in furnishing patient care" (66 FR 39897). Thus, in the FY 2002 final rule, CMS reiterated its policy that resident research time not associated with the diagnosis or treatment of a particular patient could not be included in the IME FTE count (66 FR 39897). In the FY 2007 final rule, CMS clarified that this exclusion also applied to all nonpatient care activities, such as didactic conferences and seminars (71 FR 48040).

Section 5505(a) of the Affordable Care Act added new subparagraph (J) to section 1886(h)(4) (as amended by section 5504) of the Act to allow hospitals to count certain nonpatient care activities that occur in certain nonprovider settings, including didactic conferences and seminars, in the hospital's direct GME FTE resident counts. The provision added by section 5505(a) allows a hospital to count the time that residents spend training in an approved program in a "nonprovider setting that is primarily engaged in furnishing patient care" for direct GME purposes, even if those residents are engaged in nonpatient care activities, such as didactic conferences and seminars (but not including research not associated with the treatment or diagnosis of a particular patient), during that training time at the nonprovider site. This statutory change is effective for cost reporting periods beginning on or after July 1, 2009. In the August 3, 2010 proposed rule (75 FR 46388), we proposed to revise our regulations at § 413.78(f)(1) and (g)(1) to reflect the statutory provision.

Section 5505(b) of the Affordable Care Act addressed IME and added a new clause (x) to section 1886(d)(5)(B) of the Act which allows certain nonpatient care activities, including didactic conferences and seminars (but not including research not associated with the treatment or diagnosis of a particular patient), to be counted for IME purposes

as well. However, for IME purposes, this change only applies to such activities during training that occurs in subsection (d) hospitals (which are IPPS hospitals), subsection (d) Puerto Rico hospitals (IPPS hospitals in Puerto Rico), hospitals that are reimbursed under a reimbursement system authorized under section 1814(b)(3) of the Act, or provider-based hospital outpatient departments. The IME provision is applicable to cost reporting periods beginning on or after January 1, 1983. In the August 3, 2010 proposed rule (75 FR 46388), we proposed to revise our regulations at § 412.105(f)(1)(ii)(A) through (f)(1)(ii)(D) and (f)(1)(iii)(C) to reflect these statutory provisions.

As specified in section 1886(d)(5)(B)(x)(III) of the Act, as added by section 5505(b) of the Affordable Care Act, research activities that are not associated with the treatment or diagnosis of a particular patient are excluded from the allowable IME count of FTE residents, and this specific change applies to cost reporting periods beginning on or after October 1, 2001. Section 5505(c) of the Affordable Care Act provides that section 1886(d)(5)(B)(x)(III) of the Act shall not give rise to any inference as to how the law in effect prior to October 1, 2001, should be interpreted. We discuss these provisions and our proposed and final implementation under section XXI.C.3. of this preamble.

Section 10501(j) of Public Law 111–148 amended section 5505 to clarify its application. The amendment prohibits the provisions of section 5505 from being applied in a manner that would require the reopening of settled cost reports except where the provider has a jurisdictionally proper appeal pending on the issue of direct GME or IME payments as of March 23, 2010 (the date of the enactment of Pub. L. 111–148). In the August 3, 2010 proposed rule (75 FR 46388), we proposed to reflect this provision in the proposed revisions to our regulations under § 412.105(f)(1)(ii), § 412.105(f)(1)(iii)(C), and § 413.78(h). We also proposed, as mentioned in section XXI.B.1. of this preamble with respect to section 5504 of the Affordable Care Act, to interpret "jurisdictionally proper appeal pending" on direct GME or IME payments for this section to mean that, in order for a hospital to request a change to its FTE count, direct GME or IME respectively, the "jurisdictionally proper appeal pending" must be specific to direct GME or IME respectively. For example, in order for a hospital to increase its FTE count with regard to a provision of the Affordable Care Act that is unique to IME (such as inclusion in the IME count of didactic time occurring in the hospital as specified by new section 1886(d)(5)(B)(x)(II)) of the Act, the hospital's "jurisdictionally proper appeal pending" must be on an IME issue related to IME FTEs or the available bed count. However, if the hospital's "jurisdictionally proper appeal pending" is on an issue that only affects direct GME payments, such as the initial residency period or the Medicare patient load, that appeal would not be sufficient in order for the hospital to increase its FTE count with regard to a provision of the Affordable Care Act that is unique to IME, such as didactic time in the hospital setting.

Comment: Several commenters provided a general statement on their belief that the Medicare program is intended to support all resident training time. The commenters explained that direct patient care, research activities, and educational and didactic activities all comprise one "seamless educational experience" of physician resident training. The commenters believed that Congress did not intend for this fluid training to be "parsed" by CMS.

Response: We disagree with the commenters' assertions regarding Congressional intent to fund resident training. The Conference Report that accompanied the Social Security Amendments of 1965, Public Law 89–97 (S. Rept. No. 404, 89th Cong., 1st Sess. 36 (1965); H.R. No. 213, 89th Cong., 1st Sess. 32 (1965)) shows that Congress intended for Medicare GME funding to be limited in scope and temporary in its duration. The Conference Report also indicates that Medicare GME funding was only intended to assist hospitals in resident training, and not to fully fund such training. Finally, we note that much of the "parsing" of resident training time into allowable and nonallowable time was mandated by Congress, and as such, CMS does not have discretion to allow all resident training time to count for Medicare GME payment purposes.

Comment: Many commenters disagreed with our interpretation of the application provision of section 5505(d) of the Affordable Care Act. The commenters believed that the statute clearly allows hospitals to reopen cost reports that have a jurisdictionally proper pending appeal as of March 23, 2010, regardless of whether or not the issue under appeal is specifically related to direct GME or IME payments. Because many of the provisions of section 5505 apply retroactively, the commenters believed that CMS should not place additional restrictions on a hospital's ability to request reopenings of cost reports. The commenters also believed that hospitals with cost reports for which the hospitals retained a right to timely file a jurisdictionally proper appeal as of March 23, 2010 should be allowed to reopen such cost reports, whether or not the appeal was pending by that date.

Another commenter requested that CMS clarify certain issues surrounding the application of section 5505. The commenter asked how providers will be paid for previous disallowances of didactic time for IME purposes, now that section 5505 allows hospitals to count such time retroactively since January 1, 1983, if most relevant cost reports cannot be reopened under the application of section 5505. The commenter also asked if administrative and judicial decisions that disallowed IME didactic time can be reversed.

Another commenter requested that CMS clarify the cost reporting periods to which section 5505 applies. The commenter explained that providers have 180 days to appeal a Notice of Program Reimbursement (NPR), and, therefore, hospitals that received a final determination on their cost reports after September 24, 2009 would not be permitted to appeal or reopen a cost report for didactic time for the purposes of section 5505. The commenter believed that CMS should allow hospitals that have not received their initial NPR as of September 24, 2009 to reopen or appeal their respective cost reports.

Response: Section 5505(d) of the Affordable Care Act explicitly states that the amendments of that section need not be applied to settled cost reports, unless there is a jurisdictionally proper appeal pending on that cost report on certain direct GME or IME issues. We do not have the authority to expand the scope of section 5505(d) to pending appeals on other issues, and we are retaining our interpretation of the term "jurisdictionally proper appeal pending" in the context of section 5505(d) to mean that the appeal must be specific to direct GME or IME respectively. We believe that the intent of section 5505 as a whole was to change GME policy for the future, and that the intent of section 5505(d) specifically was to limit the number of cost report adjustments, and not to encourage a mass reopening of cost reports. The cost report reopening process is one that is very costly and time-consuming for CMS and its contractors, and it is disruptive to the efficient operation of the Medicare program. Therefore, we interpreted section 5505(d) in the spirit of the section as a whole, to be only applicable in those limited circumstances where there is a "jurisdictionally proper appeal

pending" on a cost report specific to direct GME or IME respectively.

2. Definition of "Nonprovider Setting That Is Primarily Engaged in Furnishing Patient Care"

As stated above, section 5505(a) of the Affordable Care Act amended section 1886(h)(4) of the Act to allow a hospital to count the time that residents spend in certain didactic nonpatient care activities in nonprovider sites towards the hospital's direct GME resident count for cost reporting periods beginning on or after July 1, 2009. Section 5505(a)(2) defines the term "nonprovider setting that is primarily engaged in furnishing patient care" to mean "a nonprovider setting in which the primary activity is the care and treatment of patients, as defined by the Secretary." In past discussions regarding our policy to disallow time spent by residents in didactic nonpatient care activities, we have provided extensive explanations of what is meant by the term "patient care activities." When section 1886(h)(4)(E) of the Act was first implemented, we specifically stated that "only time spent in activities relating to patient care may be counted [in nonprovider sites]" (54 FR 40292, September 29, 1989). In 1998, when we implemented the statute allowing FTE residents to be counted in nonprovider sites for IME, we reiterated that a hospital may only count resident training time "in nonprovider sites for indirect and direct GME, respectively, if the resident is involved in patient care" (63 FR 40986, July 31, 1998). In addition, we note that the scope of the term "patient care" had been well-established in the Medicare program even prior to issuance of the first rules on counting FTE residents for purposes of direct GME and IME payments. For example, prior to the IPPS, acute care hospitals were paid by Medicare for inpatient services based on their reasonable operating costs, or costs relating to the provision of reasonable and necessary "patient care." The longstanding regulation at 42 CFR 413.9 (Costs related to patient care) specifies that Medicare payment is limited to those services relating to "patient care," or to those directly related to covered services for the care of beneficiaries. In the August 18, 2006 **Federal Register,** we defined the term "patient care activities" at 42 CFR 413.75(b) in a way that was consistent with these previous, plain-language applications of the term as "the care and treatment of particular patients, including services for which a physician or other practitioner may bill, and orientation activities as defined in this section" (71 FR 48142).

Section 5505(a) of the Affordable Care Act added a new subparagraph (K) to section 1886(h)(5) of the Act which defines the term "nonprovider setting that is primarily engaged in furnishing patient care" to mean "a nonprovider setting in which the primary activity is the care and treatment of particular patients, as defined by the Secretary." This definition uses the term "patient care" which we have defined previously, as discussed above. In the August 3, 2010 proposed rule (75 FR 46388 and 46389), we proposed to continue applying our current definition of the term "patient care" as described above and in current regulations and other guidance. Examples of nonprovider settings that would be "primarily engaged in furnishing patient care" are those settings in which the main mission is to provide patient care, such as doctors' offices and community health clinics. Nonprovider settings that *would not* meet these criteria include those with a main mission other than patient care. An example of a nonprovider setting that does not meet the "primarily engaged in furnishing patient care" criterion set forth in this section would be a hotel or convention center. While residents may attend didactic conferences and seminars in a hotel or convention center, that didactic time cannot be counted toward a hospital's direct GME FTE count because the main mission of a hotel or convention center is the provision of hospitality and meeting services. Thus, any such time spent in a hotel or convention center would not occur in a setting that is primarily engaged in furnishing patient care. Another example of such settings is a medical school and dental school, even if those schools are part of a larger system that includes institutions that are primarily engaged in patient care. Despite any affiliations with patient care settings, medical and dental schools are institutions that are primarily engaged in educational activities as opposed to patient care. Medical and dental schools retain their principal mission of education regardless of their participation in various systems and affiliations, parts of which may involve settings that are primarily engaged in furnishing patient care.

The exclusion of medical and dental schools from the definition of "nonprovider setting that is primarily engaged in furnishing patient care" is consistent with longstanding CMS policy, and we have addressed this policy several times in the past. We explained in response to comments in the aforementioned August 18, 2006 **Federal Register** that, "[W]e understand that it is quite common for hospitals, especially large academic medical centers, to be located on the same campus as a medical school, where the buildings are very closely situated or even connected, and the facilities are often shared. However * * * hospitals, nonprovider sites, and medical schools are structured separately for legal and financial purposes, and are recognized independently for state licensing and Medicare cost reporting purposes." As we stated in the FY 2007 final rule, "to put it simply, a hospital is not a medical school, and a medical school is not a hospital" (71 FR 48093). In the August 22, 2007 **Federal Register,** we clarified that, "[T]he commenter is also correct that orientation activities in a related medical school cannot be counted * * * the nonprovider settings we were referring to in which orientation may be counted are those nonprovider settings such as physicians' offices or clinics, where patient care is routinely provided and a hospital is permitted to count the time spent by residents in accordance with our regulations at §§ 412.105(f)(1)(ii)(C) and 413.78(f), *not* other nonprovider settings where time spent by residents is not permitted to be counted for purposes of direct GME and IME" (72 FR 47382). Thus, while time spent by residents in certain nonpatient care activities may be counted for direct GME payment purposes in a nonprovider site primarily engaged in furnishing patient care, time spent by residents in nonpatient care activities at nonprovider sites that are not primarily engaged in patient care activities is not allowable for direct GME and IME payment purposes.

In the August 3, 2010 proposed rule (75 FR 46389), we proposed to add, under § 413.75(b), the statutory definition of "nonprovider setting that is primarily engaged in furnishing patient care" to the definition of general terms used throughout the GME regulations.

Comment: A number of commenters requested that CMS adopt a one workday payment policy threshold for didactic time as it relates to resident training in the nonprovider setting. The commenters indicated that this threshold would allow a hospital to count a full day of resident training, so long as the resident engaged in some patient care during the day (that is, the entire day of training did not consist of didactic training time). The commenters believed that this suggested policy change would ease and simplify hospitals' administrative burdens. The commenter suggested that if CMS is not willing to adopt this policy threshold, CMS at least confirm that its current one

workday administrative rule, which is a documentation policy and not a payment policy, continues to apply for IME purposes to didactic training in nonprovider settings.

Response: We believe that, with section 5505, Congress has spoken definitively regarding didactic time. Prior to the enactment of the Affordable Care Act, our strict reading of the statute regarding "patient care" led us to deny counting didactic training for IME in the hospital settings and to deny counting didactic time for both direct GME and IME in the nonprovider setting. As such, we adopted the one workday rule as an administrative expediency policy for hospitals that wished to simplify documentation practices. However, now that Congress has specifically allowed all didactic training in the hospital for IME, and even allowed didactic training time in a nonprovider site that is "primarily engaged in furnishing patient care" to be counted for direct GME, we believe that generally, most didactic training in GME programs will now be allowable under the provisions of section 5505. Accordingly, we believe it is appropriate to strictly apply the statutory criteria and no longer allow hospitals to apply a one workday administrative rule. Therefore, we are clarifying in this final rule that the one workday administrative rule regarding didactic training time will no longer be permitted for IME or direct GME documentation and counting of time beginning with portions of cost reporting periods beginning on or after January 1, 2011.

Comment: Many commenters suggested that CMS include dental clinics within the definition of a "nonprovider setting that is primarily engaged in providing patient care." The commenters explained that dental schools frequently train dental residents in patient-care clinics that are located on the dental school premises. The commenters pointed out that this is in contrast to medical schools, which do not typically operate medical clinics. As such, the commenters claimed that "dental residency programs are singled out by CMS' proposed interpretation in a way that medical residency programs are not." The commenters maintained that because the "main mission" of dental clinics is clearly to provide patient care, the time that a dental resident spends in a clinic, including any time the residents spends in didactic training in the clinic, should be counted for DGME payment purposes.

Another commenter requested that, in addition to dental school clinics, CMS include physician offices housed within medical schools and homes of patients in its definition of "a nonprovider setting that is primarily engaged in furnishing patient care."

Another commenter asked if a nonteaching hospital could be considered "a nonprovider setting that is primarily engaged in furnishing patient care."

Response: We agree with the commenters who requested that we consider dental school clinics to be a "nonprovider setting that is primarily engaged in furnishing patient care." In the proposed definition at § 413.75(b), we defined "nonprovider setting that is primarily engaged in furnishing patient care" as "a nonprovider setting in which the primary activity is the care and treatment of patients." We agree that dental and medical clinics fit that proposed criterion. Therefore, we are amending our proposed policy to include both dental and medical school patient care clinics in the category of a "nonprovider setting that is primarily engaged in furnishing patient care," as long as the hospital clearly documents that any such didactic activities occurred in the clinics proper, and not in another location on the school campus. For example, a didactic activity that occurs in a conference room that is clearly located within the clinic may be counted, but if the same activity occurs elsewhere on the school campus that is outside the clinic, the time may not be counted.

A physician's office is also considered a "nonprovider setting that is primarily engaged in furnishing patient care." Homes of patients are obviously not settings that are primarily engaged in furnishing patient care, and nonteaching hospitals are not considered "nonprovider settings" at all because they are, by definition, providers. Furthermore, the regulations at § 413.78(b) state that a hospital cannot claim the time spent by residents training at another hospital. We are not expanding our definition of "nonprovider setting that is primarily engaged in furnishing patient care" to any other additional settings in this final rule.

After consideration of the public comments we received, we are finalizing our proposed definition of "nonprovider setting that is primarily engaged in furnishing patient care," at § 413.75(b), but we are amending our proposed policy to include dental and medical school clinics under that definition, as discussed above.

Comment: One commenter asked about a case in which a resident is transferred to train at another hospital, and which hospital should claim that FTE time in such a case.

Response: This comment is out of scope of the provisions of the proposed rule and is not relevant to the GME changes of the Affordable Care Act that are being implemented. Therefore, we are not addressing it in this final rule.

3. Distinguishing Between Allowed "Nonpatient Care Activities" and Nonallowable Research Time

As discussed above, research time that is not associated with the treatment or diagnosis of a particular patient is specifically excluded from the "nonpatient care activities, such as didactic conferences and seminars" that are otherwise allowable under section 5505 of the Affordable Care Act. There are several unique features of "research not associated with the treatment or diagnosis of a particular patient" that distinguish it from "nonpatient care activities, such as didactic conferences and seminars." From the outset of the Medicare program, research costs have not been considered reasonable costs of patient care, unless the research is associated with the treatment or diagnosis of a particular patient. (S. Rept. No. 89–404, Part I, p. 36 (June 30, 1965) ("Identifiable expenses for medical research * * * over and above the costs closely related to normal patient care, would not be met from the trust fund.")); 31 FR 14814, Nov. 22, 1966 (promulgating prior version of 42 CFR 413.90(a)).

"Research not associated with the treatment or diagnosis of a particular patient" usually comprises activities that are focused on developing new medical treatments, evaluating medical treatments for efficacy or safety, or elaborating upon knowledge that will contribute to the development and evaluation of new medical treatments in the future, rather than on establishing a diagnosis or furnishing therapeutic services for a particular patient.

Section 5505 of the Affordable Care Act further distinguishes "research not associated with the treatment or diagnosis of a particular patient" from "nonpatient care activities, such as didactic conferences and seminars," by specifying that nonpatient care activities include "didactic conferences and seminars," but not research that is not associated with the treatment or diagnosis of a particular patient. Conferences or seminars could include an administrative rotation, which would include resident training in the administrative aspects of medical care such as practice management.

Comment: Many commenters believed that the definition of "research not associated with the treatment or diagnosis of a particular patient" was

too broad. Specifically, several commenters remarked that the inclusion of "evaluating medical treatments for efficacy or safety" appeared to include quality and safety projects, which the commenters believed to be essential to train a new generation of physicians who prioritize quality and safety in patient care. The commenters requested that CMS clarify that resident time spent on quality and safety projects is countable as didactic time. One commenter specifically suggested that CMS revise the definition of research to be "activities whose sole purpose is the development of new medical treatment for use in the future."

Several commenters also requested that CMS adopt a one workday payment policy threshold for research time. Similar to the same commenters' request above for a one workday threshold for didactic time, the commenters requested that if CMS would not be willing to adopt the one workday threshold suggestion, CMS adopt a one workday administrative rule for research time, which is a documentation policy and not a payment policy. The commenters were of the opinion that consistency between the policies for both didactic and research time is critical for reducing hospitals' administrative burden and preventing confusion between the two policies.

Response: We are not revising our proposed definition of "research not associated with the treatment or diagnosis of a particular patient" at this time, nor are we expanding our proposed policy on research time to allow for a one workday threshold. Moreover, we are not establishing an administrative rule for documenting resident time spent in such research activities. We believe that our proposed definition of the term encompasses the activities that Congress excluded from the allowed "nonpatient care activities" of section 5505. We believe that, with section 5505, Congress has spoken definitively regarding research time. In section 5505, Congress clearly excluded counting any research time for IME purposes and research time at nonprovider sites for direct GME purposes, unless it is associated with the treatment or diagnosis of a particular patient. As such, we believe it is appropriate to exclude even a partial day of "research not associated with the treatment or diagnosis of a particular patient" from the determination of the number of FTEs for GME payment purposes. A one workday rule would effectively allow the hospital to count nonallowable research time in its FTE counts. In addition, as we explained in response to a comment above, the one workday administrative rule is no longer permitted for didactic time either, for portions of cost reporting periods beginning on or after January 1, 2011.

Comment: One commenter stated that, in the proposed rule, CMS did not include a regulation regarding the October 1, 2001 effective date for the exclusion of "research activities that are not associated with the treatment or diagnosis of a particular patient" for IME payment purposes. The commenter noted that the statute clearly stated the October 1, 2001 effective date of the provision, and that the statute clarified that "such section, as so added, shall not give rise to any inference as to how the law in effect prior to such date should be interpreted." The commenter then remarked that when CMS referred in the proposed rule to section 5505's allowance of didactic activities for IME purposes (75 FR 46387), which CMS noted as excluding such research, CMS referred simultaneously to two policies with effective dates that spanned almost 20 years. The commenter requested that CMS revise the regulations to include the October 1, 2001 effective date of the exclusion of such research, and to treat the two policies regarding didactic time and research time as two distinct and separate policies.

Response: The existing regulations regarding the exclusion of research for IME merely reiterate longstanding policy, as we explained in the August 1, 2001 final rule (66 FR 39896) and, therefore, that the regulation at 42 CFR 412.105(f)(1)(iii)(B) does not have an effective date. We did not include the October 1, 2001 effective date of the exclusion of research time for IME payment purposes in our proposed regulations for the same reason. Congress specified the date we reiterated in our policy by regulation as an effective date for the statutory exclusion of research time for IME. However, Congress did not state that research activities prior to October 1, 2001, are allowed. Rather, Congress deferred to the Secretary to interpret and implement policy regarding research time for IME payment purposes prior to October 1, 2001. This is the meaning of the statement in section 5505 that is quoted by the commenter, that "such section, as so added, shall not give rise to any inference as to how the law in effect prior to such date should be interpreted." This language further means that, subject to the limitations of section 5505(d), in the instances where providers disagree with the Secretary's interpretation of research policy in cost reports prior to October 1, 2001, and the providers appeal research time that was disallowed from their IME FTE counts in those cost reports, the matter would be reserved for adjudication in the courts.

However, there has been some confusion regarding the application of this provision of the Affordable Care Act. Some individuals, and one court decision, have interpreted section 5505(b)'s allowance of nonpatient care activities for IME as of January 1, 1983 to include research time as well. We believe that this interpretation is contrary to the express intent of the statute, which clearly distinguishes "research activities that are not associated with the treatment or diagnosis of a particular patient" from "nonpatient care activities, such as didactic conferences and seminars," and which unmistakably excludes research time. In addition, as explained above, Congress clearly provided that the October 1, 2001 effective date "shall not give rise to any inference" as to how any research time prior to that effective date should be counted for IME. Several other commenters on the proposed rule shared CMS' understanding of section 5505(c) within their comments. These commenters acknowledged that "the law *does not opine* on the status of IME research time prior to October 1, 2001, stating that research provision of the law 'shall not give rise to any inference as to how the law in effect prior to such date should be interpreted'" (emphasis added). This widespread understanding of section 5505(c) aligns with CMS' understanding of this Affordable Care Act language, and is consistent with our view that the Secretary has the authority to interpret section 1886(d)(5)(B) of the Act, as amended by section 5505, and implement policy regarding the time spent in research activities prior to October 1, 2001, as the Secretary determines appropriate.

For all these reasons, we are exercising our authority to define the term "nonpatient care activities," as used in section 5505(b) of the ACA, to adopt proposed § 412.105(f)(1)(iii)(C), which excludes research activities not related to the treatment or diagnosis of a particular patient from the category of allowable "nonpatient care activities." Instead, such research activities would continue to be excluded under § 412.105(f)(1)(iii)(B). In addition to the language and structure of section 5505, as discussed above, we believe such a decision is also supported by important differences between these research activities and the types of nonpatient care activities, for example, didactic conferences and seminars, enumerated in section 5505. For example, interns and residents are often assigned to

blocks of research time, whereas didactic conferences and seminars may occur during periods when an intern or resident is otherwise assigned to a rotation primarily requiring the provision of patient care. In addition, such didactic conferences and seminars may involve presentations or discussions related to the treatment of current patients. It has been our consistent policy to exclude research activities, as we clarified in rulemaking in 2001. We also engaged in rulemaking in 2006 to clarify that didactic time would also not be counted for GME and IME purposes. Set against this background, we read section 5505 as reflecting Congress' clear intent to reverse our 2006 policy regarding didactic time and to ratify our policy regarding research time from October 1, 2001, forward, while also indicating that it was not directing any result as to research activities before October 1, 2001.

After consideration of the public comments we received, we are adopting revised § 412.105(f)(1)(iii)(C) of the regulations to include allowed didactic activities for IME purposes, as proposed without modification. "Research activities that are not associated with the treatment or diagnosis of a particular patient" continue to be excluded under § 412.105(f)(1)(iii)(B).

4. Approved Leaves of Absence

In the FY 2008 IPPS proposed rule (72 FR 24814), we proposed to remove vacation, sick leave and other types of leave from the FTE calculation for IME and for direct GME purposes. We proposed this policy based on our belief that such leave time involved neither patient care nor nonpatient care activities. However, we did not finalize this proposed policy after many public commenters explained that the implementation of the policy would involve significant administrative burdens (FY 2008 IPPS final rule, 72 FR 47374). Instead, our previously existing policy, which allowed vacation and sick leave generally to be counted for direct GME and IME purposes, remained in effect. In the FY 2008 IPPS proposed rule, we also proposed to continue to count the time spent by residents in orientation activities in both the hospital and nonprovider settings. We proposed this policy because we recognized the distinct character of orientation activities as essential to the provision of patient care by residents. We did finalize our policy on orientation time, and in doing so, we specified that patient care activities means the care and treatment of particular patients, including services for which a physician or other practitioner may bill, and orientation activities (§ 413.75(b)), effective for cost reporting periods beginning on or after October 1, 2007.

Section 5505(a) of the Affordable Care Act added new subparagraph (K) to section 1886(h)(4) of the Act to clarify that hospitals may count residents' vacation, sick leave, and other approved leave time toward the hospitals' direct GME FTE resident count, so long as the leave does not prolong the total time the resident participates in his or her approved program. This direct GME provision regarding leave time is effective for cost reporting periods beginning on or after January 1, 1983. In addition, section 5505(b) of the Affordable Care Act added section 1886(d)(5)(B)(x)(I) to the Act, which allows hospitals to count residents' vacation, sick leave, and other approved leave time toward the hospitals' IME FTE resident count, as long as the leave does not prolong the total time the resident participates in his or her approved program. This IME provision regarding leave time is effective for cost reporting periods beginning on or after January 1, 1983.

In the August 3, 2010 proposed rule (75 FR 46389 and 46390), we proposed to revise our regulations to reflect these statutory changes regarding counting residents' vacation, sick leave, and other approved leave time toward the hospitals' direct FTE resident count under new § 413.78(h) for GME and under § 412.105(f)(1)(iii)(D) for IME. We noted that when a resident on leave is training at two hospitals, each hospital is to count the proportion of the leave of absence time as specified in the August 22, 2007 final rule (72 FR 47382). In that rule, we explained that regardless of which hospital is paying the resident's salaries and fringe benefits, the hospital to which the resident is assigned during the time the vacation is taken is the hospital that counts that FTE time for direct GME and IME. If the rotation schedule does not clearly indicate where the resident is assigned during the time the vacation is taken, the hospitals to which the resident rotates over the course of the academic year would divide and count the resident's vacation time proportionately based on the amount of time spent in actual training at the respective hospitals. In the August 3, 2010 proposed rule, we also proposed to specify that "other approved leave" includes those types of generally accepted leave of short duration (those that do not prolong the total time that the resident is participating in the approved training program) that have not been included in our resident leave time policies in the past. Examples of such "other approved leave" could include jury duty, other court leave, or voting leave.

Comment: Numerous commenters objected to the instructions regarding allocating resident vacation time when a resident's rotation schedule does not clearly indicate the resident's assignment during the vacation time. The commenters claimed that hospitals had never been given such strict instructions regarding the allocation of resident vacation time, and the methods used by hospitals to allocate such time among themselves have worked well up until this point. The commenters requested that if CMS is not willing to grant hospitals the discretion to allocate resident vacation time on their own, hospitals should at least be permitted to choose the period over which they divide the time, so long as the period is used consistently.

Response: The instructions given above regarding allocating resident vacation time is a statement of existing policy that we finalized in the FY 2008 final rule (72 FR 47382). We note that this policy only applies in a situation where a resident's rotation schedule does not clearly indicate the resident's assignment during the vacation time. The above instructions are necessary in a case where rotation schedules are unclear as to which hospital a resident is assigned to at any given time. We also note that we have observed a number of hospitals successfully using the method we described to divide resident training time.

Comment: One commenter requested that CMS clarify the definition of "other approved leave," specifically to address whether time away for education that is part of a benefit package would be considered "other approved leave."

Response: In the proposed rule, we explained "other approved leave" as those types of generally accepted leave of short duration (those that do not prolong the total time that the resident is participating in the approved training program) that have not been included in our resident leave time policies in the past. We stated that examples of such "other approved leave" could include jury duty, other court leave, or voting leave. In general, "other approved leave" refers to leave that is taken for personal or administrative reasons, and not leave related to a resident's school or training program.

After consideration of the public comments we received, we are finalizing our proposed policies regarding approved leaves of absences,

as reflected in the regulation at §§ 412.105(f)(1)(iii)(D) and 413.78(h).

D. Reductions and Increases to Hospitals' FTE Resident Caps for GME Payment Purposes (§§ 412.105(f)(1)(iv) and 413.79(m) and (o))

1. General Background on Methodology for Determining the FTE Resident Count

As we discuss in section XXI.A. of this preamble, Medicare makes both direct and indirect GME payments to hospitals that train residents in approved medical residency training programs. Direct GME payments are made in accordance with section 1886(h) of the Act, based generally on hospital-specific PRAs, the number of FTE residents, and the hospital's Medicare patient share. IME payments are made in accordance with section 1886(d)(5)(B) of the Act, based generally on the ratio of the hospital's FTE residents to the number of hospital beds applied to the DRG payments. Accordingly, the calculation of both direct GME and IME payments is affected by the number of FTE residents that a hospital is allowed to count; generally, the greater the number of FTE residents a hospital counts, the greater the amount of Medicare direct GME and IME payments the hospital will receive. In an attempt to end the implicit incentive for hospitals to increase the number of FTE residents, Congress instituted a cap on the number of allopathic and osteopathic residents a hospital is allowed to count for direct GME and IME purposes under the provisions of section 1886(h)(4)(F) of the Act for direct GME and section 1886(d)(5)(B)(v) of the Act for IME. Dental and podiatric residents are not included in this statutorily mandated cap.

2. Reduction of Hospitals' FTE Resident Caps Under the Provisions of Section 5503 of the Affordable Care Act

Some hospitals have trained a number of allopathic and osteopathic residents in excess of their FTE resident caps. Other hospitals have reduced their FTE resident counts to some level below their FTE resident caps. Section 5503 of the Affordable Care Act added a new section 1886(h)(8) to the Act to provide for reductions in the statutory FTE resident caps for direct GME under Medicare for certain hospitals, and authorizes a "redistribution" to hospitals of the estimated number of FTE resident slots resulting from the reductions. Section 5503 also amended section 1886(d)(5)(B)(v) of the Act to require application of the provisions of 1886(h)(8) "in the same manner" to the FTE resident caps for IME. A previous redistribution of "unused" FTE resident slots was performed under section 422 of Public Law 108–173 (the MMA). Section 422 provided for the redistribution of unused residency positions effective for portions of cost reporting periods beginning on or after July 1, 2005. While the redistribution under section 5503 of the Affordable Care Act is similar to section 422 of Public Law 108–173, there are substantive differences between the two provisions.

The new section 1886(h)(8)(A) of the Act provides that, effective for portions of cost reporting periods occurring on or after July 1, 2011, a hospital's FTE resident cap will be reduced if its "reference resident level" is less than its "otherwise applicable resident limit," as these terms are described below. We note that when we refer to "otherwise applicable resident cap" and "otherwise applicable FTE resident cap" in the regulations, we are using these phrases interchangeably with the statutory term "otherwise applicable resident limit." Use of the phrases "otherwise applicable resident cap" and "otherwise applicable FTE resident cap" is consistent with our reference to a hospital's "limit" as its "cap." Rural hospitals with fewer than 250 acute care inpatient beds as well as those hospitals described in section XXI.D.4. of this preamble are exempt from a reduction. For other hospitals, any such reduction will be equal to 65 percent of the difference between the hospital's "otherwise applicable resident limit" and its "reference resident level."

Under the new section 1886(h)(8)(B) of the Act, the Secretary is authorized to increase the FTE resident caps for certain categories of hospitals for portions of cost reporting periods occurring on or after July 1, 2011, by an aggregate number that does not exceed the estimated overall reduction in FTE resident caps for all hospitals under section 1886(h)(8)(A) of the Act. A single hospital may receive an increase in its FTE resident cap of no more than 75 additional FTEs. That is, a hospital would be allowed to receive up to 75 additional slots for direct GME and up to 75 additional slots for IME. In determining which hospitals would receive an increase in their FTE resident caps, sections 1886(h)(8)(B) through 1886(h)(8)(E) of the Act directs us to—

- Take into account the demonstrated likelihood of the hospital filling the additional positions within the first three cost reporting periods beginning on or after July 1, 2011.
- Take into account whether the hospital has an accredited rural training track program.
- Distribute 70 percent of the resident slots to hospitals located in States with resident-to-population ratios in the lowest quartile.
- Distribute 30 percent of the resident slots to hospitals located in a State, a territory of the United States, or the District of Columbia that are among the top 10 States, territories, or Districts in terms of the ratio of the total population living in an area designated as a health professional shortage area (HSPA), as of March 23, 2010, to the total population, and/or to hospitals located in rural areas.

In summary, section 5503 of the Affordable Care Act added a new section 1886(h)(8) of the Act that prescribes a methodology for determining reductions to certain hospitals' FTE resident caps based on unused FTE resident slots, provides for certain exceptions to the FTE resident cap reductions, and includes general criteria that CMS must consider in making a "redistribution" to other hospitals of the estimated number of FTE resident slots resulting from the reductions in the FTE resident caps. In the August 3, 2010 proposed rule (75 FR 46391 through 46410), we proposed procedures for determining whether, and by what amount, a hospital's FTE resident cap is subject to a reduction under section 1886(h)(8)(A) of the Act. We also specified an application process for hospitals that seek to receive increases in their FTE resident caps and the specific criteria that we will use to determine which hospitals will receive increases in their FTE resident caps under section 1886(h)(8)(B) of the Act.

3. Hospitals Subject to the FTE Resident Cap Reduction

As indicated earlier, section 1886(h)(8)(A) of the Act, as added by section 5503 of the Affordable Care Act, provides that if a hospital's "reference resident level" is less than its "otherwise applicable resident limit," its FTE resident cap(s) will be reduced by 65 percent of the difference between its "otherwise applicable resident limit" and its "reference resident level." Under section 1886(h)(8)(H)(i) of the Act (as added by section 5503 of the Affordable Care Act), the "reference resident level" refers to the number of unweighted allopathic and osteopathic FTE residents who are training at a hospital in a given cost reporting period. That is, the "reference resident level" refers to a hospital's allopathic and osteopathic FTE resident count for a specific period. Under section 1886(h)(8)(H)(ii) the "otherwise applicable resident limit" refers to a hospital's FTE resident cap established under sections

1886(h)(4)(F)(i) and (h)(4)(H) of the Act for direct GME payment purposes and a hospital's resident cap established under section 1886(d)(5)(B)(v) for IME payment purposes. For most hospitals, the permanent FTE cap under section 1886(h)(4)(F)(i) of the Act is based on: (1) For an urban hospital, the number of unweighted allopathic and osteopathic FTE residents in the hospital's most recent cost reporting period ending on or before December 31, 1996 (the "1996 cap"); (2) for a rural hospital, 130 percent of the 1996 cap, adjusted as specified under existing § 413.79(c)(2); and (3) any adjustments to the hospital's cap under paragraph (7), which specifies the previous "redistribution" of resident positions required by section 422 of Public Law 108–173. Section 1886(h)(4)(H) of the Act specifies that a hospital's FTE resident cap under subparagraph (F) may be adjusted for a new medical residency training program established on or after January 1, 1995, participation in a Medicare GME affiliated group, and establishment by an urban hospital of a separately accredited rural training track program. In the August 3, 2010 proposed rule (75 FR46391), we proposed that, in defining a hospital's "otherwise applicable resident limit" for purposes of section 1886(h)(8)(A) of the Act, we will look at the hospital's 1996 cap during its reference year, as adjusted for the following criteria: New programs as defined at § 413.79(e); participation in a Medicare GME affiliation agreement as defined at §§ 413.75(b) and 413.79(f); participation in an emergency Medicare GME affiliation agreement as defined at § 413.79(f); participation in a hospital merger; and whether an urban hospital has a separately accredited rural training track program as defined at § 413.79(k). We discuss the applicability of Medicare GME affiliation agreements under section 1886(h)(8)(A) of the Act in more detail under section XXI.D.8.c. of this preamble and the treatment of hospital mergers under section XXI.D.8.d. of this preamble. Furthermore, section 1886(h)(8)(H)(iii) of the Act requires that, in determining a hospital's "otherwise applicable resident limit," section 1886(h)(7)(A) of the Act shall be taken into account. Section 1886(h)(7)(A) of the Act refers to the reduction to a hospital's cap(s) under section 422 of Public Law 108–173. The application of section 422 of Public Law 108–173 to the implementation of section 5503 of the Affordable Care Act is further discussed under section XXI.D.10. of this preamble.

In our discussion of the provisions of section 5503 of the Affordable Care Act under this section, we generally refer to a hospital's number of unweighted allopathic and osteopathic FTE residents in a particular period as a hospital's "resident level." We also refer to a hospital's resident level in the applicable "reference period," as explained further below, as the hospital's "reference resident level." In addition, we refer to the "otherwise applicable resident limit" as the hospital's FTE resident cap that is applicable during the relevant cost reporting period. Thus, in the August 3, 2010 proposed rule (75 FR 46391), we proposed that, effective for portions of cost reporting periods beginning on or after July 1, 2011, we would permanently reduce the hospital's FTE resident cap by 65 percent of the difference between the reference resident level and the hospital's otherwise applicable resident limit for IME and direct GME, respectively. For example, if a hospital's otherwise applicable resident limit for the reference period is 100, and its reference resident level is 80 FTEs, we would reduce the hospital's FTE resident cap by 13 FTEs (0.65*[100—80)] = 13). We proposed to add new regulations at § 412.105(f)(1)(iv)(B)(*2*) for IME and at § 413.79(m) for direct GME to reflect our proposals regarding reductions to hospitals' FTE resident caps under section 5503 of the Affordable Care Act.

Comment: One commenter requested that emergency Medicare GME affiliation agreements be disregarded for purposes of determining a hospital's otherwise applicable resident limit. The commenter agreed with CMS' proposed policy to consider Medicare GME affiliation agreements when determining a hospital's otherwise applicable resident limit, but stated that emergency Medicare GME affiliation agreements are distinctly different from regular Medicare GME affiliation agreements because the purpose of emergency Medicare GME affiliation agreements is to minimize the disruption in residents' training that occurs as a result of a natural disaster. The commenter stated that as a result of Hurricane Ike, which led to the declaration of an emergency area under section 1135(b) of the Act for parts of Louisiana and Texas, its facility quickly entered into an emergency Medicare GME affiliation agreement without first determining whether it needed a temporary cap increase. The commenter stated that facilities that acted as quickly as its hospital should not be penalized for taking such prompt action. The commenter believed that emergency Medicare GME affiliation agreements should not be considered in determining a hospital's otherwise applicable resident limit because "[f]rom a statutory perspective, the provision defining the 'otherwise applicable resident limit' only cross-references the routine Medicare GME affiliation agreement provisions in section 1886(h)(4)(H) of the Act. It does not cross-reference the emergency Medicare GME affiliation agreement legislative authority in section 1135(b) of the Act." The commenter indicated that if CMS decides not to account for emergency Medicare GME affiliation agreements in determining a hospital's otherwise applicable resident limit, CMS would not in turn reduce the FTE resident caps of hospitals located in emergency areas. Rather, the commenter suggested that CMS could exempt hospitals located in areas affected by an emergency from the cap redistribution on the basis that they were unable to train up to their FTE resident caps due to the natural catastrophes. The commenter stated that because the natural catastrophe led to the declaration of a public health emergency under section 1135(b) of the Act, "* * * the direct consequences of those events should also fall under the same waiver authority." The commenter stated "[i]mplicitly, the Affordable Care Act imposes a retrospective requirement on hospitals to have trained at a level at least equal to their FTE resident caps to avoid the penalty of the FTE cap reduction. With its section 1135(b) authority, CMS can waive this retrospective requirement effective with the date of the beginning of the emergency period."

Response: We commend the commenters for its hospital's participation in an emergency Medicare GME affiliation agreement to provide residents training in affected hospitals with continuity of training. We do not agree that an emergency Medicare GME affiliation agreement is fundamentally different from a regular Medicare GME affiliation agreement. Both types of affiliation agreements allow for a temporary adjustment to hospitals' FTE caps to permit residents to train at another facility. Furthermore, section 1886(h)(4)(H)(ii) of the Act, which gives the Secretary the authority to prescribe rules which allow members of the same affiliated group to elect to apply the members' caps on an aggregate basis, is the statutory foundation for the establishment of emergency Medicare GME affiliation agreements. Section 1135(b) of the Act only provides the Secretary with the authority to temporarily waive or modify the

requirements of a regular Medicare GME affiliation agreement; it did not provide the Secretary with the authority to create emergency Medicare GME affiliation agreements. We further note that the "emergency period" declared pursuant to section 1135(b) of the Act with respect to Hurricane Ike expired before the emergency Medicare GME affiliation agreements provision ended.

In response to the commenters request that CMS exempt hospitals that were unable to train up to their caps because of a natural disaster, section 1886(h)(8)(A) of the Act does not provide for specific exemption for hospitals located in an emergency area during an emergency period. We believe that section 1886(h)(8)(A) of the Act allows a hospital to account for its participation in a regular Medicare GME affiliated group and to account for its participation in an emergency Medicare GME affiliated group in determining a hospital's "otherwise applicable resident limit."

Therefore, we are finalizing our policy as proposed that based on the statutory language at section 1886(h)(8)(H)(iii) of the Act, in determining a hospital's otherwise applicable resident limit, we will generally consider a hospital's 1996 cap during its reference year, as adjusted for the following criteria: new programs as defined at § 413.79(e); participation in a Medicare GME affiliation agreement as defined at §§ 413.75(b) and 413.79(f); participation in an emergency Medicare GME affiliation agreement as defined at § 413.79(f); participation in a hospital merger; and whether an urban hospital has a separately accredited rural training track program as defined at § 413.79(k).

4. Exemption from FTE Resident Cap Reduction for Certain Rural Hospitals

Section 1886(h)(8)(A)(ii)(I) of the Act, as added by section 5503 of the Affordable Care Act, specifically exempts rural hospitals (as defined in section 1886(d)(2)(D)(ii) of the Act) with fewer than 250 acute care inpatient beds from reductions to their FTE resident caps under section 1886(h)(8)(A). Section 1886(d)(2)(D)(ii) of the Act defines a rural area as any area outside a Metropolitan Statistical Area (MSA). Under the existing regulations at § 412.62(f)(ii), an "urban area" means: (1) An MSA or New England County Metropolitan Area (NECMA), as defined by the Executive Office of Management and Budget; or (2) the following New England counties: Litchfield County, Connecticut; York County, Maine; Sagadahoc County, Maine; Merrimack County, New Hampshire; and Newport County, Rhode Island. Under existing § 412.62(f)(iii), a "rural area" means any area outside an urban area. We note that we no longer use the term MSA, and instead use the term Core-Based Statistical Area (CBSA) for locality and wage index purposes.

A hospital's bed size is based on its number of available beds, as determined for IME payment purposes under § 412.105(b) of the regulations. For purposes of determining whether a rural hospital has fewer than 250 beds, we proposed to use data from the rural hospital's most recent cost reporting period ending on or before March 23, 2010. (This information may be found on Worksheet S–3, Part I of the Medicare cost report, CMS–2552–96: the sum of lines 1 and 6 through 10 in column 2, minus line 26 in column 6, divided by the number of days in the cost reporting period.) In the August 3, 2010 proposed rule (75 FR 46391 and 46392), we proposed that if a rural hospital has fewer than 250 beds in its most recent cost reporting period ending on or before March 23, 2010, the hospital would not be subject to a possible reduction to its FTE resident cap(s) under section 1886(h)(8)(A) of the Act. However, if a rural hospital has at least 250 beds in its most recent cost reporting period ending on or before March 23, 2010, we proposed that the rural hospital would be subject to a reduction to its FTE resident cap(s).

Comment: Several commenters supported the exclusion of rural hospitals with fewer than 250 beds from a cap reduction under section 1886(h)(8)(A) of the Act. The commenters stated it is important that these hospitals be exempt from a cap reduction and that excluding hospitals with fewer than 250 beds will ensure that section 5503 of the Affordable Care Act will not cause unnecessary harm to these rural hospitals. The commenter added that due to the rural workforce shortage, these rural hospitals have a need to retain their current residency slots which they already struggle to maintain.

One commenter requested clarification on the treatment of rural hospitals that have a temporary decrease in their available bed count due to, for example, a unit being closed for renovation. The commenter asked whether a hospital that only experiences a temporary decrease in its bed count would be exempt from a cap reduction because the bed count would probably increase once the renovation, for example, was completed. The commenter stated that the cost reports at issue, from the most recent cost reporting ending on or before March 23, 2010, will neither be audited nor reviewed by the Medicare contractor by the date cap reductions are made. The commenter asked for clarification on how the policy for exempting rural hospitals with fewer than 250 beds would be applied if the temporary reduction is later proven to be invalid. The commenter recommended "* * * that CMS require a review process to validate the bed size of rural hospitals that claim exemption from the FTE cap reduction due to their bed count."

Response: We appreciate the commenters' support of our proposed policy to exclude rural hospitals with fewer than 250 beds from cap reductions under section 1886(h)(8)(A) of the Act. In response to the commenter who requested clarification on whether rural hospitals that only had a temporary bed reduction, such that they meet the requirement of having fewer than 250 beds for a limited period of time, a hospital will be exempt from a cap reduction, regardless of whether or not the bed reduction is temporary, if the data on its cost report at issue indicates the hospital had fewer than 250 beds. We note that the determination regarding the availability of beds in a unit that is closed for renovation would be made in accordance with the existing regulations at § 412.105(b)(1), which states, "[b]eds in a unit or ward that is not occupied to provide a level of care that would be payable under the acute care hospital inpatient prospective payment system at any time during the 3 preceding months (the beds in the unit or ward are to be excluded from the determination of available bed days during the current month)." We also are clarifying in this final rule that the Medicare contractor will determine whether a rural hospital has fewer than 250 beds by using the number of available beds on the rural hospital's most recently submitted cost report for its cost reporting period ending on or before March 23, 2010, for which a cost report has been settled or has been submitted to the Medicare contractor by March 23, 2010. That is, we are clarifying that the cost report used to determine whether the rural hospital is exempt from a cap reduction must have been settled or have been submitted to the Medicare contractor by March 23, 2010. In this final rule, we are revising § 413.79(m)(1) to reflect this clarification.

In response to the commenter's request that CMS require a review process to validate a rural hospital's bed count, the Medicare contractors will review rural hospitals' bed size in accordance with normal audit procedures.

5. Application of Section 5503 to Hospitals That Participate in Demonstration Projects or Voluntary Residency Reduction Programs and Certain Other Hospitals

In addition to certain rural hospitals as noted above, section 1886(h)(8)(A)(ii) of the Act also exempts certain other hospitals from a residency cap reduction. Section 1886(h)(8)(A)(ii)(II) of the Act, as amended by section 5503 of the Affordable Care Act, specifically exempts "a hospital that was part of a qualifying entity which had a voluntary residency reduction plan approved under paragraph (6)(B) or under the authority of section 402 of Public Law 90–248, if the hospital demonstrates to the Secretary that it has a specific plan in place for filling the unused positions by not later than 2 years after the date of enactment of this paragraph." This language is referring to the National Voluntary Residency Reduction Plan (VRRP), the New York Medicare GME Demonstration (New York Demonstration), and the Utah Medicare GME Demonstration (Utah Demonstration).

In July 1997, 42 New York teaching hospitals participated in the New York Demonstration. An additional seven hospitals joined the New York Demonstration in July 1998. The purpose of the New York Demonstration was to test reimbursement changes associated with residency training to determine whether hospitals could use time-limited transition funding to replace and reengineer the services provided by a portion of their residency trainees. In exchange for reducing its count of residents by 20 to 25 percent over a 5-year period, while maintaining or increasing its primary care-to-specialty ratio of residents, a participating hospital (or consortium of hospitals) participating in the New York Demonstration would receive "hold harmless payments" for 6 years.

Since 2003, nine Utah teaching hospitals have participated in the Utah Demonstration to allocate Medicare GME funding to Utah hospitals based on health professions workforce planning. Under the Utah Demonstration, Medicare contractors redirect Medicare direct GME funds from each of the teaching hospitals in Utah and pay those amounts to the Utah Medical Education Council, an agency of the State government.

Under the VRRP approved under section 1886(h)(6)(B) of the Act, hospitals could use time-limited transition funding to replace the services provided by a portion of their residents. In exchange for reducing its count of residents by 20 to 25 percent over a 5-year period, while maintaining or increasing its primary care-to-specialty ratio of residents, a VRRP participating hospital would receive "hold harmless payments" for 5 years.

Based on the language of section 1886(h)(8)(A)(ii)(II) of the Act, in the August 3, 2010 proposed rule (75 FR 46392), we proposed that hospitals that participated in the New York Demonstration, the Utah Demonstration, or a VRRP could be exempt from a cap reduction under section 1886(h)(8)(A) of the Act. We proposed to not differentiate between those hospitals that withdrew from either demonstration prior to its completion and those hospitals that completed either demonstration. That is, we proposed that any hospital that, at some point, participated in the New York Demonstration, the Utah Demonstration, or the VRRP could be exempt from a cap reduction. Specifically, consistent with the statutory language at section 1886(h)(8) of the Act, even though only seven hospitals actually completed the New York Demonstration, any hospital that participated in the New York Demonstration could be exempt from a cap reduction. As required under section 1886(h)(8)(A)(ii)(II) of the Act, to be exempt from the cap reduction, a hospital that had a VRRP approved under section 1886(h)(6)(B) of the Act or hospitals that participated in a demonstration project approved under section 402 of Public Law 90–248 must demonstrate to the Secretary that it has a plan in place for filling its unused slots within 2 years after the date of enactment of Public Law 111–148 (that is, by March 23, 2012). We proposed that those hospitals must submit their plans specifying how they would fill their unused slots to CMS by December 1, 2010, in order to be exempt from a cap reduction.

In addition to the hospitals described under 1886(h)(8)(A)(ii)(II) of the Act, section 1886(h)(8)(A)(ii)(III) of the Act exempts a hospital described under section 1886(h)(4)(H)(v) of the Act from a cap reduction. Therefore, in the August 3, 2010 proposed rule (75 FR 46392), we proposed that such a hospital described under section 1886(h)(4)(H)(v) of the Act be exempt from a cap reduction.

Finally, section 1886(h)(8)(H)(i) of the Act provides that the hospital's reference resident level is the resident level for the one cost reporting period out of the three most recent cost reporting periods ending before March 23, 2010, with the highest resident level. Under section 1886(h)(8)(A)(i) of the Act, that reference resident level is used to make the determination of whether a hospital's FTE resident cap(s) should be reduced. Therefore, in the August 3, 2010 proposed rule, we proposed that if a hospital trains at or above its otherwise applicable resident limit in all of its three most recent cost reporting periods ending before March 23, 2010, the hospital would be exempt from a cap reduction. A separate determination would be made regarding any reduction to the hospital's direct GME cap and its IME cap.

Comment: Several commenters supported our proposed policy to exclude hospitals that participated in the Utah Demonstration and the New York Demonstration if the hospitals submit their plans to CMS by December 1, 2010, specifying how they would fill their unused slots by March 23, 2012.

One commenter asserted that it is important for CMS to understand the structure, timeline, and post-demonstration requirements associated with the New York Demonstration. The commenter stated the terms and conditions for the seven hospitals that completed the New York Demonstration required that, if a hospital exceeded its post-demonstration cap, which was in effect until July 1, 2009, and reduced a participating hospital's cap 20 to 25 percent below its otherwise applicable Medicare resident cap, the hospital would be accountable for the Medicare GME reimbursement associated with its additional FTE residents. The commenter stated the hospitals that completed the New York Demonstration had to adhere to a separate lower Medicare resident cap through July 1, 2009, a requirement not applicable to other hospitals in the country. The commenter also noted that certain hospitals that did not complete the entire New York demonstration had already made substantial reductions to their FTE resident counts of 20 or 25 percent before formally ending their participation in the demonstration. The commenter stated, for this reason, it agrees with CMS' proposal to apply the Affordable Care Act exemption for hospitals that participated in the demonstration authority to hospitals that participated at any time in the New York Demonstration.

The commenter stated CMS' proposal to require that hospitals that participated in the New York Demonstration submit a plan to CMS by December 1, 2010, for how they plan to fill their slots by March 23, 2012, is unrealistic, given that the final rule will not be available until November 1, 2010, and "* * * given the magnitude of the reductions required by CMS and the fact that CMS mandated an incentive to

maintain those large reductions through July 1, 2009." The commenter requested that CMS finalize a policy that hospitals that participated in the New York Demonstration be required to submit a plan to CMS by March 1, 2011, for how they plan to fill their unused slots by March 23, 2012. The commenter suggested that if CMS needs an estimate of the number of slots the demonstration hospitals plan to fill by March 23, 2012, CMS could require a two-step process by which hospitals would provide to CMS by December 1, 2010, an estimate of the number of FTE resident slots they plan to fill and provide to CMS by March 1, 2011, a detailed plan for how they anticipate to fill those slots.

The commenter noted that some hospitals that participated in the New York Demonstration accepted displaced residents from hospitals that closed after March 23, 2008. The commenter recommended that CMS allow, but not require, hospitals that participated in the New York Demonstration to "* * * include as part of its submitted plan for filling unused slots by March 23, 2012 its intention to apply for additional slots to continue training residents in the same program as displaced residents from a closed hospital, if the hospital desires to do so." The commenter believed that CMS' interpretation that demonstration hospitals must have residents training in the hospitals' unused slots as of March 23, 2012, is not practical because it cannot be reconciled with the "core characteristic of residency training," that residents begin their applicable program years July 1 of each calendar year. The commenter added that CMS' interpretation means that a hospital would have to have residents training in the unused slots by July 1, 2011, to ensure these residents are actually training as of March 23, 2012, which would only allow these hospitals approximately 15 months to fill their unused slots rather than 2 years. The commenter stated "[t]he more sensible approach to interpreting this requirement would be for CMS to permit the demonstration hospitals to specify a plan whereby the hospitals will fill the unused slots in a progressive and logical manner that recognizes the staggered nature of residency training." Therefore, the commenter recommended that the unused FTE resident cap slots of hospitals that participated in the New York Demonstration be considered to be filled by March 23, 2012, if any one of the following three scenarios occurs: (1) A resident is actually training at the hospital by March 23, 2012; (2) a resident is enrolled in a hospital's unused cap slot by March 23, 2012, and will begin training no later than July 1, 2012; or (3) "there is a demonstrated likelihood of slots in a new program being filled in a progressive sequence as evidenced by the matching to or enrollment in the program of the first cohort of residents by that date and that first cohort will begin training in the slots no later than July 1, 2012."

Response: We appreciate the commenters' support of our proposed policy that if a hospital at any time participated in the New York Demonstration or the Utah Demonstration, it would be exempt from a cap reduction if it submits a plan to CMS by December 1, 2010, for how it plans to fill its unused slots by March 23, 2012. We understand the commenter's concern that the proposed requirement to submit a plan to CMS by December 1, 2010, for how the hospital plans to fill its slots by March 23, 2012, may not provide hospitals that participated in the New York demonstration sufficient time to draft their plans. Therefore, we are amending our proposed policy in this final rule to require hospitals that participated in the New York Demonstration, the Utah Demonstration, or a VRRP to submit their plans to CMS by January 21, 2011, for how they plan to fill their unused slots by March 23, 2012. We are revising the proposed regulatory text at § 413.79(m)(2) to reflect this date change.

In response to the commenter's question of whether applying for FTE cap slots from a closed hospital under section 5506 of the Affordable Care Act could be considered part of a hospital's plan for filling unused slots by March 23, 2012, we do not agree that showing that a hospital is applying for cap slots under section 5506 demonstrates that the hospital will be filling its unused cap slots by March 23, 2012. On the contrary, applying for additional cap slots under section 5506 of the Affordable Care Act would give a demonstration hospital an additional cap, which could further increase its number of unused slots.

In response to the commenter's concerns regarding the likelihood of having additional residents training as of March 23, 2012, we are stating in this final rule that if a hospital described under section 1886(h)(8)(A)(ii)(II) of the Act can show that a resident(s) has matched into a program by March 23, 2012, or has signed a formal letter of commitment with the program by March 23, 2012, and that a resident(s) will begin training no later than July 1, 2012, that hospital has met the requirement of demonstrating that it has a plan for filling an unused cap slot(s) by March 23, 2012. We note that, for purposes of submitting a plan indicating that the hospital will fill its unused slots by March 23, 2012, the type of documentation required to demonstrate that the hospital is filling unused slots must be the type of documentation listed under the demonstrated likelihood criteria for purposes of implementing cap increases under section 5503 of the Affordable Care Act. For example, the hospital could submit to CMS the documentation it submitted to the ACGME requesting approval for a new program or a permanent expansion to the number of residents in its existing program.

In summary, we are finalizing our proposed policies regarding the treatment of hospitals that participated in the New York Demonstration, the Utah Demonstration, and a VRRP, and a hospital described under section 1886(h)(4)(H)(v) of the Act, except that we are allowing hospitals to submit their plans to CMS by January 21, 2011, for how they plan to fill their unused slots by March 23, 2012. We also are allowing hospitals that participated in the New York Demonstration, the Utah Demonstration, or a VRRP to demonstrate that they are filling unused slots by March 23, 2012, by showing that a resident(s) has matched into a program by March 23, 2012, or has signed a formal letter of commitment with the program by March 23, 2012, and will begin training at the hospital at the latest by July 1, 2012.

We also are clarifying in this final rule that a hospital that is training at or above its otherwise applicable resident limit in all three of its three most recent cost reporting periods ending before March 23, 2010, for which a cost report has been either settled or submitted (subject to audit) to the Medicare contractor by March 23, 2010, is exempt from a cap reduction under section 1886(h)(8)(A) of the Act. A separate determination would be made regarding any reduction to the hospital's direct GME cap and its IME cap.

6. Determining the Estimated Number of FTE Resident Slots Available for Redistribution

In accordance with section 1886(h)(8)(A) of the Act, as added by section 5503 of the Affordable Care Act, we will determine the number of resident positions available for redistribution by estimating the expected reductions to hospitals' FTE resident caps. We believe that section 1886(h)(8)(A) of the Act allows us to distinguish between the FTE counts that are used to determine the number of

FTE resident slots that are available for redistribution (that is, the "redistribution pool") and the actual number of FTE residents by which hospitals' FTE resident caps are ultimately reduced. In the August 3, 2010 proposed rule (75 FR 46392 and 46393), we proposed to estimate the reduction to a hospital's FTE cap under section 1886(h)(8)(A) of the Act for purposes of determining the number of FTEs that a hospital might contribute to the redistribution pool. We proposed to estimate the redistribution pool in accordance with section 1886(h)(8)(B)(i) of the Act, as added by section 5503(a)(4), which states: "The aggregate number of increases in the otherwise applicable resident limit under this subparagraph shall be equal to the aggregate reduction in such limits attributable to subparagraph (A) (*as estimated by the Secretary*)" (emphasis added). Therefore, we proposed to estimate and redistribute the number of resident slots in the redistribution pool, and to ensure that the aggregate number of FTE residents by which we increase the FTE resident caps of qualifying hospitals under section 1886(h)(8)(B) of the Act is not more than CMS' estimate of the redistribution pool. In the proposed rule, we noted if we were subsequently to perform an audit, as described further in section XXI.D.7. of this preamble, in order to make a final determination regarding any reductions to a hospital's FTE resident cap, and find that the aggregate number of FTE resident reductions differed from the number CMS had initially estimated for the redistribution pool, the number of slots that can be redistributed from the redistribution pool to qualifying hospitals would not be affected.

To ensure that we would begin making payments for most hospitals based on the revised FTE resident caps by July 1, 2011, as required by the statute, in the August 3, 2010 proposed rule (75 FR 46393), we proposed to set a date by which we would have determined a hospital's reference resident level and compared it to the hospital's otherwise applicable resident limit(s) to estimate whether, and by how much, the hospital's FTE cap(s) would be reduced. We proposed this date to be May 1, 2011, and that date would apply for all hospitals for purposes of determining an estimate of whether and by how much their FTE resident caps should be reduced. In the event that the Medicare contractors have not completed an audit of a hospital's GME data (explained further under section XXI.D.7. of this preamble) by May 1, 2011, we proposed to estimate by May 1, 2011, the number of FTE residents by which a hospital's FTE resident cap is expected to be reduced based on the data in the as-submitted cost report. For example, a Medicare contractor may estimate by May 1, 2011, that Hospital A's FTE resident cap should be reduced by 10 FTEs. Thus, we would place 10 FTEs into the redistribution pool. It is possible that even after May 1, 2011, the contractor may continue to audit Hospital A's relevant cost reports to determine if, in fact, 10 FTEs is the appropriate number by which to reduce Hospital A's FTE resident cap, and could ultimately conclude that Hospital A's FTE resident cap should only be reduced by 8 FTEs. If the Medicare contractor does not make this revised determination based on the audit by May 1, 2011, while we would only reduce Hospital A's FTE resident cap by 8 FTEs effective July 1, 2011, the number of FTE residents in the redistribution pool attributable to Hospital A would remain at 10 FTEs (the estimated number as of May 1, 2011). Similarly, if the Medicare contractor ultimately concluded that Hospital A's FTE resident cap should be reduced by 12 FTEs, but this final determination is not made by May 1, 2011, Hospital A's FTE resident cap would be reduced by 12 FTEs effective July 1, 2011, but the number of FTE residents in the redistribution pool attributable to Hospital A would remain at 10 FTEs. Therefore, because we believe that section 1886(h)(8)(B)(i) of the Act allows us to distinguish between the FTE counts that are used to determine the size of the redistribution pool, and the actual aggregate number of FTE residents by which hospitals' FTE resident caps are ultimately reduced, we proposed to use estimated information to determine possible reductions to hospitals' FTE resident caps to estimate the number of FTE resident slots to be distributed under section 1886(h)(8)(B) of the Act. In addition, we noted that, as was done when we implemented section 422 of Public Law 108–173, Medicare contractors will provide hospitals with a time-limited opportunity to review cap reduction determinations for possible technical errors before they are finalized. As set forth at section 5503(a)(3), cap reduction determinations are not subject to administrative or judicial review.

Comment: One commenter believed that the proposal for CMS to distinguish between the estimated number of positions available for redistribution and the actual number of positions by which hospitals' FTE residency caps ultimately would be reduced is a reasonable proposal. However, the commenter was concerned that an underestimate of available positions could result in reducing the universe of GME positions. The commenter recommended that CMS consider reconciling the number of positions lost with the number awarded after cost reports are audited, applications evaluated, and the redistribution process complete. Further, the commenter stated that this additional step should not result in loss of positions once they are awarded.

One commenter asked how Medicare contractors are to estimate the number of slots available by May 1, 2011, because the cost reports at issue will not be audited in the timeframe in which the resident information is needed. The commenter stated that cost report settlements for disproportionate share hospitals (DSHs), many of which are also teaching hospitals, are delayed until CMS can supply revised Supplemental Security Income (SSI) ratios. The commenter stated that final settlements have not been issued for cost reporting periods beginning in FY 2006 and for subsequent cost reporting periods. The commenter asked whether CMS is proposing to use cost reports that have not been final settled to perform the FTE cap redistribution. The commenter also asked whether there would be "* * * special, abbreviated audits or settlements made specific to the FTE resident counts for those years in order to ensure that the data used to redistribute the FTE caps is reviewed by the Medicare contractor and settled appropriately." The commenter suggested that, in establishing any additional workload requirements for Medicare contractors for purposes of section 5503 of the Affordable Care Act, CMS consider other Medicare contractor workload requirements, including settlement of DSH appeals under CMS Ruling 1498 and wage index reviews, which have to be completed in the same timeframe.

One commenter noted that implementation of section 5505 of the Affordable Care Act may increase a hospital's reference resident levels for didactic time in the hospital's three most recent cost reporting periods submitted before March 23, 2010. The commenter asked whether hospitals' reference resident levels would be modified to account for any additional resident FTEs. The commenter asked whether if adjustments are to be made, they would be made for all affected hospitals or only for those hospitals that have a jurisdictionally valid appeal. The commenter stated that the section 5505 provisions will be available for all

providers when the FTE cap reductions are applied in subsequent cost reporting periods.

One commenter believed that reference resident levels used for purposes of reducing hospitals' caps under section 5503 of the Affordable Care Act should be based on years that will include additional FTEs based on additional FTE time spent at nonprovider sites that is due to the changes made by section 5504 of the Affordable Care Act. The commenter stated that its hospital is below its cap because it has not been allowed to include weeks spent by residents at nonprovider sites. The commenter stated that if its hospital's cap is reduced, this action would eliminate any benefit it may receive by being able to count additional rotations at nonprovider sites. The commenter also referred to the recordkeeping requirement included in section 5504 of the Affordable Care Act. The commenter stated "It does not seem logical to reduce caps while at the same time monitoring for increases in FTEs for time spent in nonprovider settings." The commenter stated that redistributing FTE cap slots should be delayed until adjustments have been made to hospitals' FTE counts for weeks spent at nonprovider settings.

Several commenters supported CMS' proposal to provide hospitals with a time-limited opportunity to review cap reductions for any possible technical errors before the reductions are finalized.

Response: In response to the commenter who recommended that CMS reconcile the number of FTE cap slots reduced with the number of FTE cap slots awarded, we note that we are not required to reconcile the cap reductions with the caps awarded under the provisions of section 5503 of the Affordable Care Act. Specifically, section 1886(h)(8)(B)(i) of the Act, in part, states "The aggregate number of increases in the otherwise applicable resident limit under this subparagraph shall be equal to the aggregate reduction in such limits attributable to subparagraph (A) (*as estimated by the Secretary*)" (emphasis added). We believe the use of the phrase "as estimated by the Secretary" gives the Secretary the authority to estimate the FTE redistribution pool for purposes of finality. We and the Medicare contractors will endeavor to make cap reduction determinations based on the most accurate data available. However, because some of the audits to finally determine whether a hospital has excess slots will not be completed prior to July 1, 2011, and because the statutory effective date of the increases to hospitals' caps is July 1, 2011, we are not changing our proposed policy and, therefore, we are not reconciling the number of FTE cap slots reduced with the number of FTE cap slots awarded. Doing so would preclude implementation of section 5503 of the Affordable Care Act by its effective date, July 1, 2011.

In response to the commenter who requested clarification on how Medicare contractors can estimate the FTE redistribution pool as of May 1, 2011, as we note in a subsequent comment, we are moving the internal deadline for Medicare contractors to estimate the number of slots available for redistribution from May 1, 2011 to May 16, 2011. As we did when implementing section 422 of the MMA, we will be issuing separate instructions to the Medicare contractors regarding the process for determining if and by how much a hospital's FTE resident cap should be reduced. We understand that many cost reports used for determining if and by how much a hospital's FTE resident cap might be reduced will not be final settled, or may not even be audited under normal cost report settlement procedures. We note that section 1886(h)(8)(H) of the Act directs the Secretary to use the highest resident level (as the reference resident level) for any of a hospital's three most recent cost reporting periods ending before the date of enactment, which is March 23, 2010, "for which a cost report has been settled (or, if not, submitted (subject to audit)), as determined by the Secretary." Thus, the Secretary has the flexibility to use either settled cost reports, if available, or not as yet settled cost reports, and subject those cost reports, or parts of those cost reports, to audit, as appropriate. In response to the commenter's concern about additional Medicare contractor workload requirements, we understand the competing audit and payment priorities the Medicare contractors face in the upcoming months, and we will make every effort to be accommodating to those concerns.

In relation to the issue of adding in FTE resident time for didactic time previously disallowed for purposes of IME in the hospital setting and for purposes of direct GME in the nonprovider setting as provided by section 5505, the hospital's cost report must either not have been settled or must have a jurisdictionally proper appeal pending by March 23, 2010, for IME to include didactic time in prior cost reporting periods for IME payment purposes. For purposes of direct GME in the nonprovider setting, the hospital's cost report must either not have been settled or must have a jurisdictionally proper appeal pending for direct GME to include didactic time in a prior cost reporting period starting on or after July 1, 2009 (but ending before March 23, 2010) for direct GME payment purposes. If an audit of a hospital's cost report is performed by May 16, 2011, and as a result of that audit, a hospital's cost report includes the additional didactic time, that adjustment will be reflected in the estimate of the FTE redistribution pool. Because in this final rule we are finalizing our proposed policy to give Medicare contractors until December 31, 2011, to continue their audit work with respect to reductions under section 5503 of the Affordable Care Act, adjustments to hospitals' cost reports for didactic time as a result of audit work through December 31, 2011, for purposes of calculating any cap reductions, will be retroactive to July 1, 2011. However, changes made between May 16, 2011 and December 31, 2011 will not be included in the estimated pool. We note that including this didactic time prior to determining whether a hospital should receive a cap reduction is contingent on Medicare contractor workload. That is, we must use the most recent cost report data we have available in order to make the determination of whether a hospital's cap should be reduced in such a manner that section 5503 can be implemented by July 1, 2011.

In response to the commenter who requested clarification on whether time FTE residents spent in nonprovider settings, which was disallowed, would be added into a hospital's FTE count, prior to determining whether the hospital should receive a cap reduction, we note that section 5504 of the Affordable Care Act is effective prospectively for cost reporting periods beginning on or after July 1, 2010. Because we are stating in this final rule that cost reports used to determine a hospital's reference resident level must be settled or submitted to the Medicare contractor by March 23, 2010, section 5504 will have no bearing on a hospital's reference cost reporting period because those amendments are only effective for cost reporting periods beginning on or after July 1, 2010.

7. Reference Cost Reports That Are Under Appeal

We understand that there may be instances where a hospital's otherwise applicable resident limit or a hospital's FTE resident count for a reference cost reporting period might be under appeal. When implementing section 422 of Public Law 108–173, we stated in the August 11, 2004 **Federal Register** (69 FR

49118) that we believe that it is in the best interest of the Medicare program, CMS, the contractors, and the hospitals to adopt an approach that allows for finality as early as possible during the process of implementing this provision. We stated that we believed Congress gave some consideration to the challenges we would encounter in implementing a provision as complex as section 422 in such a short timeframe by providing the Secretary with the discretion to distinguish between the FTE counts that are used to estimate the number of FTE resident slots that are available for redistribution (that is, the "redistribution pool"), and the actual number of FTE residents by which hospitals' FTE resident caps are ultimately reduced.

Furthermore, as we stated in the August 11, 2004 **Federal Register** (69 FR 49118), the fact that the Congress took the unusual step of including the language at section 1886(h)(7)(D) of the Act which provides that, "There shall be no administrative or judicial review * * * with respect to determinations made under this paragraph," supports the position advocating for finality. If we had delayed determinations concerning hospital-specific FTE cap determinations until all affected cost reports are settled, audited, and appealed through the various channels normally available to providers, the language, and in particular the specified timeframe, under section 1886(h)(7)(D) of the Act would have been rendered meaningless. Therefore, despite the complexity of section 422 and the potential for profound and long-term GME payment ramifications, we believed that the Congress did not expect the implementation of section 422 provision to linger indefinitely. Rather, by limiting appeal rights and requiring an effective date of July 1, 2005 for reductions in FTE resident caps (which required implementation in a relatively short timeframe), the Congress expected section 1886(h)(7) of the Act, as added by section 422 of Public Law 108–173, to be implemented with expediency and finality.

Similarly, in implementing section 5503 of the Affordable Care Act, we note that determinations under section 1886(h)(8)(A)(i) of the Act are required to be made by and effective July 1, 2011, and, for the same reasons cited when we implemented section 422, we believe these determinations should be final on, or as quickly as possible after, that date. We note that section 5503(a)(3) of the Affordable Care Act modified section 1886(h)(7)(E) of the Act by inserting "or paragraph (8)" to specify that there shall be no administrative or judicial review with respect to determinations made under section 5503 as well. Therefore, as was our final policy when implementing section 422, in the August 3, 2010 proposed rule (75 FR 46393), we proposed to not wait for all appeals of reference period cost reports to be resolved before making a final determination as to whether and by how much a hospital's FTE resident cap will be reduced. However, we indicated that we did perceive the need in certain instances to continue audit work for a limited time period past July 1, 2011, to promote the accuracy of FTE resident cap reduction determinations. As under section 422, we proposed to adopt a policy that would require the Medicare contractors to use the latest available cost report or audit data at the time they make their hospital-specific determinations. We proposed that if, as of the time the Medicare contractor makes the determination as to whether and by how much a hospital's FTE resident cap should be reduced, there is a pending appeal of the hospital's otherwise applicable resident limit for the reference cost reporting period (that is, a final decision has not been rendered), the Medicare contractor would not wait until a decision is rendered, but would use the FTE resident cap from the initially settled (as indicated in the Notice of Program Reimbursement (NPR)) reference period cost report. However, we proposed that if the appeal regarding the otherwise applicable resident limit has been resolved as of the time that the Medicare contractor makes the determination as to whether and by how much a hospital's FTE resident cap should be reduced, the Medicare contractor would use the FTE resident level as established through the appeal. We proposed that if a reference period cost report has been submitted but not settled at the time the Medicare contractor is making the determination as to whether and by how much a hospital's FTE resident cap should be reduced, the reference resident level is subject to audit by the Medicare contractor. The final determination regarding any possible reduction to the hospital's FTE resident cap is not subject to appeal. We indicated that although we would make every effort to provide contractors with the resources they need to complete the audits in time to notify each hospital by July 1, 2011, of their FTE cap determinations under section 1886(h)(8)(A) of the Act, there may be instances where the audits of the reference resident levels may not be completed by July 1, 2011. We stated that we anticipate that, within the scope of their normal audit work, the Medicare contractors will complete as many of these audits as possible, and some of the audits may not be completed until December 31, 2011. In the August 3, 2010 proposed rule (75 FR 46394), we proposed that, in accordance with section 1886(h)(8)(A) of the Act, all cap determinations made after July 1, 2011 and through December 31, 2011, would be effective retroactively to July 1, 2011.

Comment: One commenter disagreed with the proposal to not correct a hospital's FTE count due to the resolution of a hospital's appeal, unless the appeal is resolved prior to July 1, 2011. The commenter stated that "* * * Congress' determination to preclude judicial and administrative review does not give license to CMS to lock in erroneous FTE counts." The commenter stated that this same policy negatively impacted its hospitals under section 422 and will likely have a significant future impact. The commenter indicated that, under section 422, its "reference period" for calculating the section 422 cap was FY 1997. The commenter indicated that it had appealed its FY 1997 IME count as inappropriately excluding certain residents training in its psychiatric residency program. The commenter stated that, in June 2006, it entered into an administrative resolution with its Medicare contractor to include these psychiatric FTEs in its IME count. However, the commenter added, the cap was not adjusted and the IME cap remains permanently understated. The commenter stated that, as a result of the IME cap being understated, the hospital must either operate its residency program at the inappropriately reduced cap, or operate its residency program above its cap without appropriate IME reimbursement. The commenter stated that it may continue to appeal its FTE resident counts for more recent fiscal years and those years may include the year that is the new reference cost reporting period for purposes of section 5503 of the Affordable Care Act. The commenter stated that not correcting FTE resident caps for purposes of section 5503 would have the same result as under section 422. The commenter believed an erroneous cap could compound problems because the FTE resident caps could be even further reduced leading to losses in IME payments and could restrict a hospital's ability to operate its program at or near the appropriate cap levels. The commenter suggested a preferred approach that CMS provide for finality as late in the process as possible and that, at a minimum, CMS instruct its

Medicare contractors to resolve relevant cost report appeals and/or reopening requests as quickly as possible before the 2011 deadline.

Another commenter stated that CMS in the proposed rule did not define "audit." The commenter believed that the estimate of unused FTE cap slots should be derived from cost reports that are filed, amended filed, or settled. The commenter stated "[i]t is unclear why CMS chose May 1, 2011, when all of the cost reports that will be used to estimate the unused FTE caps have already been submitted or settled." The commenter suggested that the "measurement date" be changed to December 31, 2010, which is prior to the "match" date so that hospitals will be able to adjust the number of residents it is training for the July 1, 2011–June 30, 2012 academic year and so that Medicare contractors will have sufficient time to resolve any differences in the calculation of unused caps. The commenter stated that, although finality is important, the proposal to retroactively adjust a hospital's FTE cap as a result of audit work completed by December 31, 2011, is not consistent with CMS' desire for finality. The commenter recommended that the data used to estimate the FTE cap pools be final with no additional adjustments. The commenter stated "[t]his will ensure that the aggregate 1996 FTE cap pool is not affected by implementation of section 5503."

Another commenter stated that, in prior final rules, CMS has permitted determinations to be subject to audits, reopenings, and appeals within the appropriate guidelines. The commenter recommended that this final rule be treated in the same manner.

Response: We believe that we need to consider the need for accuracy and for finality in determining any reductions to a hospital's cap under section 5503 of the Affordable Care Act. Therefore, as we stated in the proposed rule, we will make every effort to provide Medicare contractors with the resources they need to complete as many audits as possible in time to notify each hospital by July 1, 2011, of their FTE cap determinations. However, in the instances where audits of the reference resident levels may not be completed by July 1, 2011, as we stated in the proposed rule, we anticipate that within the scope of their normal audit work, the Medicare contractors will complete as many of these audits as possible, and some of the audits may not be completed until December 31, 2011. We believe it would be disruptive to the Medicare contractors and to the implementation of section 5503 of the Affordable Care Act if we extended the deadline to continue audit work past December 31, 2011.

In regards to the commenter who suggested that we move the "measurement" date from May 1, 2011 to December 31, 2010, as noted elsewhere in this preamble, in this final rule, we are changing the date by which Medicare contractors need to estimate a pool of reduced cap slots for purposes of redistributing the slots under section 5503 from May 1, 2011, to May 16, 2011. We are not able to change this date to December 31, 2010, because this final rule is not effective until January 1, 2011. Furthermore, only giving Medicare contractors until December 31, 2010, will not give them sufficient time to review submitted cost reports.

In response to the commenter who stated that CMS did not define "audit" work, as noted above, we stated in the proposed rule that determinations related to hospitals' cap reductions under section 1886(h)(8)(A) of the Act would be completed in the course of the CMS' contractors normal audit work (that is, the normal process the Medicare contractors utilize to review hospital cost reports for accuracy.)

In response to the commenter who believed that determinations made under section 5503 of the Affordable Care Act should be subject to audits, reopening, and appeals within the appropriate guidelines, the statutory language for implementing section 5503 specifically precludes us from permitting administrative and judicial review of the determinations made under this provision.

After consideration of the comments we received on this section, we are finalizing our policies as proposed. That is, we are finalizing our proposed policy to not wait for appeals of reference period cost reports to be resolved before making a final determination as to whether and by how much a hospital's FTE resident cap will be reduced. In addition, we are finalizing our proposed policy that all cap determinations made after July 1, 2011, and through December 31, 2011, would be effective retroactively to July 1, 2011.

8. Determining the Reduction to a Hospital's FTE Resident Cap

a. Reference Resident Level—General

In order to determine if a hospital's reference resident level is less than the hospital's otherwise applicable FTE resident cap, section 1886(h)(8)(H) of the Act, as added by section 5503 of the Affordable Care Act, directs the Secretary to use one of three reference cost reporting periods. Section 1886(h)(8)(H) of the Act directs the Secretary to use any of a hospital's three most recent cost reporting periods ending before the date of enactment, which is March 23, 2010, with the highest resident level "for which a cost report has been settled (or, if not, submitted (subject to audit)), as determined by the Secretary," as the reference period. Generally, if the hospital's resident level for either direct GME or IME is less than the hospital's otherwise applicable resident limit for direct GME or IME, respectively, in the reference period, the hospital's FTE resident cap for direct GME and/or IME will be reduced by 65 percent of the difference between the resident level and the otherwise applicable resident limit. We note that, for purposes of determining a reduction to a hospital's direct GME cap, the unweighted direct GME cap will be compared to the unweighted direct GME FTE resident count. The following explanation is an example of how a hospital's cap(s) would be reduced under section 1886(h)(8)(A) of the Act. For purposes of this example, Hospital A's three most recent cost reporting periods ending before March 23, 2010, for which a cost report has been submitted to the Medicare contractor by March 23, 2010, are as follows: July 1, 2006–June 30, 2007; July 1, 2007–June 30, 2008; and July 1, 2008–June 30, 2009. Hospital A's FTE resident count and FTE resident caps (as adjusted for those items discussed in section XXI.D.3. of this preamble) are as noted in the table.

Cost reporting period	IME unweighted FTE count	Direct GME unweighted FTE count	IME FTE cap	Direct GME cap
July 1, 2006—June 30, 2007	17	20	18	20
July 1, 2007—June 30, 2008	16	21	20	20
July 1, 2008—June 30, 2009	14	20	20	20

As noted earlier in this preamble, a separate determination regarding whether and by how much to reduce a hospital's cap will be made for its direct GME cap and for its IME cap. In order to determine whether Hospital A would be subject to a cap reduction, we must first determine whether Hospital A was training at or above its cap in all three most recent cost reporting periods ending before March 23, 2010, for which a cost report has been settled or has been submitted to the Medicare contractor by March 23, 2010. For purposes of a reduction to Hospital A's IME cap, we note from the chart above that in all three cost reporting periods, Hospital A is training below its otherwise applicable resident limit for IME. Therefore, we know that Hospital A would be subject to an IME cap reduction. In order to determine which cost reporting period should be used as the reference period to determine the FTE cap reduction for IME, we would use the cost reporting period with the highest FTE resident count for IME, which would be July 1, 2006–June 30, 2007. Therefore, we calculate the difference between the otherwise applicable resident limit for IME for the reference period (July 1, 2006–June 30, 2007) and the reference resident level for IME, and determine the IME cap reduction based on 65 percent of the difference. For purposes of Hospital A's IME cap reduction, we would determine the difference between 18 (the otherwise applicable resident limit) and 17 (the reference resident level) and multiply that difference by 65 percent [(18–17) x .65] = 0.65. Therefore, the IME FTE cap for Hospital A would be reduced by 0.65 of an FTE. For purposes of a reduction to Hospital A's direct GME cap, we note from the chart above that Hospital A was training at or above its otherwise applicable resident limits for direct GME in all three cost reporting periods. Because a hospital that is training at or above its cap in all three cost reporting periods is exempt from a cap reduction, we would conclude that Hospital A's direct GME cap would not be reduced for direct GME payment purposes. We note that, in the August 3, 2010 proposed rule (75 FR 46394), we proposed that if a hospital has the same resident level for two or more cost reporting periods and that resident level is the "highest" resident level, we would use the cost reporting period of those "highest" cost reporting periods in which there is the least amount of difference between the resident level and the otherwise applicable resident limit to determine a cap reduction.

Comment: Many commenters disagreed with CMS' proposal that if a hospital's reference resident level is below its otherwise applicable resident limit during the hospital's reference cost reporting period, the hospital would receive a cap reduction even though that hospital might be training at or above its cap in one or both of the other two cost reporting periods. The commenters stated that a hospital should only receive a cap reduction if it is training below its FTE resident cap in *all* three of its three most recent cost reporting periods ending before March 23, 2010. One commenter disagreed with the suggestion by another commenter to exempt from a cap reduction any hospital that is training over its cap in any one cost reporting period out of the three most cost recent cost reporting periods ending before March 23, 2010. The commenter recommended that CMS finalize its proposal to only exempt hospitals that are training over their cap in all three cost reporting years.

Commenters stated it is possible that a hospital that is training at or above its FTE resident caps in 1 or 2 years of the hospital's three most recent cost reporting periods ending before March 23, 2010, which the commenters referred to as the 3-year look-back period, may lose cap slots because if the hospital is participating in a Medicare GME affiliated group, its cap may change from year to year and the year with the highest FTE resident count may not be the year with the least amount of difference between the FTE resident cap and the FTE resident count. The commenters believed that Congress' intent was only to redistribute "unused" cap slots and therefore, if a hospital was training at its cap or exceeded its cap in any cost reporting period included in the 3-year look-back period, it is clearly using its cap slots and should not receive a cap reduction. The commenters noted that they understood that CMS may have been obligated to interpret the term "reference resident level" as referring to the cost reporting period with the highest FTE resident count because of the statute's use of the phrase "the highest resident level." However, the commenters believed that Congress' instruction was that the "reference resident level" is to be "determined by the Secretary" and, therefore, CMS has the authority to finalize a policy that exempts a hospital that is training at or above its cap at some point during the 3-year look-back period, from a cap reduction. The commenters requested that CMS amend the regulations at proposed § 413.79(m)(4) to exempt, from a cap reduction, a hospital that is training at or above its otherwise applicable resident limit "for any of the three most recent cost reporting periods ending prior to March 23, 2010." The commenters stated that this suggested regulatory change would prevent "perverse consequences" for hospitals that participate in Medicare GME affiliated groups, which cause their adjusted FTE resident caps to change from year to year. The commenters gave the example of a hospital that could be training under its cap in 2007, but is training over its cap in 2008 and 2009; however, 2007 is the year with the highest resident count and, therefore, even though the hospital is training above its cap in 2008 and 2009, it would receive a cap reduction based on 65 percent of the unused cap slots based on data from the 2007 cost report.

One commenter stated the definition of "reference resident level" in the Affordable Care Act indicates that the "reference resident level" is comprised of only one year, the one cost reporting period out of the three most recent cost reporting periods with the highest resident level. The commenter believed that because a hospital's cap will not be reduced if its "otherwise applicable resident limit" exceeds its reference resident level," as long as the FTE resident count in any one of the three cost reporting periods exceeds the "otherwise applicable resident limit," it does not matter if the hospital is training below its cap in the two remaining cost reporting periods; the hospital will not receive a cap reduction. The commenter stated that this logic is not included in the preamble discussion, but, rather, when referring to a cost reporting period in which a hospital is training over its cap, the word "any" is replaced by the word "all." The commenter stated "[w]hile the actual proposed definition included in the new regulation 42 CFR 413.79(c)(1)(ii)(A) includes the correct wording of 'any', the subsequent discussion regarding the implementation of this regulation is not consistent with the plain reading of the definition. The inclusion of the word 'all' in the discussion suggests that the 'reference resident level' does not refer to a single year but to all of the three most recent years. This implies that if one of the resident levels falls below the 'otherwise applicable resident limit,' then a hospital will have its cap reduced, even if the remaining two years of its three year reference period are above the 'otherwise applicable reference level.'" The commenter stated that, historically, the Provider

Reimbursement Manual has been used by Medicare to provide guidance to auditors. However, recently, the commenter added, it appears that preamble discussion has been substituted as guidance for auditors. The commenter stated that including the word "all" in the preamble discussion is confusing and may put auditors in a position where they cannot correctly implement regulation and the law. The commenter stated that if a hospital's reference resident level is greater than its otherwise applicable resident limit, but its FTE count is less than its otherwise applicable resident limit in one or both of the two remaining cost reporting periods, the auditors may perceive that based on the preamble discussion that FTE resident counts in all three of the cost reporting periods must be above the otherwise applicable resident limit in order for the hospital to be exempt from a cap reduction and inappropriately reduce the hospital's FTE resident count. The commenter noted that because hospitals do not have appeal mechanisms available to them related to the cap reductions and because there is contradictory guidance included in the preamble of the proposed rule, hospitals may have their caps inappropriately reduced. The commenter suggested that this issue be clarified in the final rule so that audits that implement the cap reductions can be performed correctly and consistently.

Another commenter stated "CMS proposes that if a hospital trains at or above its otherwise applicable resident level in all of its three most recent cost reporting periods ending before March 23, 2010, the hospital would be exempt from a cap reduction." The commenter stated that this provision is unclear and asked whether CMS is referring to hospitals that are training FTE residents at levels above their FTE caps.

Response: We stated in the proposed rule that section 1886(h)(8)(H)(i) of the Act directs the Secretary to use as the reference cost report, the one cost report out of the hospital's three most recent cost reporting periods ending before March 23, 2010, with the highest unweighted resident count "for which a cost report has been settled (or, if not, submitted (subject to audit), as determined by the Secretary." Generally, if the hospital's reference resident level for either direct GME or IME is less than the hospital's otherwise applicable resident limit for direct GME or IME, respectively, in the reference period, the hospital's FTE resident cap for direct GME or IME will be reduced by 65 percent of the difference between the reference resident level and the otherwise applicable resident limit. We understand the commenters' concerns that if a hospital is participating in a Medicare GME affiliated group, even though that hospital may be training below its cap, the Medicare GME affiliated group as whole is training above its aggregated cap and, therefore, the individual hospital should not have its cap reduced for training residents below its otherwise applicable limit. However, as discussed further below, section 1886(h)(8)(A) of the Act does not provide for treatment of GME affiliated groups as whole. In contrast, section 422 of the MMA included specific language at section 1886(h)(7)(A)(iii) of the Act that specifically directed the Secretary to apply the provisions for determining programs subject to reductions under section 422 to hospitals that are members of the same affiliated group. Section 5503 does not include similar language. In addition, we note that the definition of "reference resident level" at section 1886(h)(8)(H)(i) of the Act states "* * * with respect to *a hospital*, the highest resident level for any of the three most recent cost reporting periods (ending before the date of enactment of this paragraph) *of the hospital* for which a cost report has been settled (or, if not, submitted (subject to audit)), as determined by the Secretary" (emphasis added). Therefore, if *a hospital* has a reference resident level below its otherwise applicable resident limit during its reference cost reporting period, then that hospital will receive a cap reduction, even if the affiliated group as a group is not training at a level below its aggregate otherwise applicable resident limit. In addition, the statute requires the Secretary to take "*the* highest resident level" (emphasis added) from the applicable reference period, and compare that level to the hospital's otherwise applicable resident limit. The statute does not include language that expressly states that if a hospital is training below its otherwise applicable resident limit during its reference cost reporting period, the Secretary shall look to the two other cost reporting periods to determine whether the hospital is training at or above its cap in either of those two other cost reporting periods. We believe that if Congress had intended a hospital to be exempt from a cap reduction if it is training at or above its cap in any of its three most recent cost reporting periods, it would have included specific statutory language instructing the Secretary that once the determination is made as to which cost reporting period is the cost reporting period with the highest FTE resident count, a determination must also be made as to whether the hospital is training at or above its cap in any of its three most recent cost reporting periods.

We believe there may be confusion as to the use of the terms "otherwise applicable resident limit" and "reference resident level." We are clarifying that "otherwise applicable resident limit" generally refers to a hospital's 1996 FTE cap adjusted for the scenarios described earlier in this preamble (including a hospital's participation in Medicare GME affiliated group) and for any cap reductions made under section 422 of Public Law 108–173 in a *specific* cost reporting period. The reference resident level refers to a hospital's highest resident level (the highest FTE resident count) for any of the three most recent cost reporting periods ending before March 23, 2010, for which a cost report has been settled, or if not, submitted (subject to audit), as determined by the Secretary. We disagree with the commenter who stated that the proposed definition of "reference resident level" for purposes of section 5503 of the Affordable Care Act includes the correct word "any," and therefore the preamble discussion is not consistent with the definition. The commenter is referring to the proposed definition of reference resident level at § 413.79(c)(1)(ii)(B), which stated "[f]or purpose of paragraph (m) of this section, *reference resident level* means with respect to a hospital, the highest resident level for any of the three most recent cost reporting periods ending before March 23, 2010, for which a cost report has been either settled or submitted (subject to audit)." We do not believe this definition is inconsistent with our preamble discussion regarding cap reductions under section 1886(h)(8)(A) of the Act. The proposed definition at § 413.79(c)(1)(ii)(B) includes the same use of the word "any," as the definition of reference resident level at section 1886(h)(8)(H)(i) of the Act, which states " * * * with respect to a hospital, the highest resident level for any of the 3 most recent cost reporting period * * *" The use of the word "any" is referring to the instruction that the Secretary is to use the one cost reporting period with the highest resident level (highest FTE resident count) from any of the hospital's three most recent cost reporting periods ending before March 23, 2010 which have been settled or if not, submitted, subject to audit. The use of the word "any" in the proposed definition at § 413.79(c)(1)(ii)(B) does not infer that if a hospital is training FTE residents at or above its FTE resident cap in any of the

three most recent cost reporting periods, that it would be exempt from a cap reduction. Rather, we specifically included in the proposed regulation text at § 413.79(m)(4) the following: "[a] hospital training at or above its otherwise applicable FTE resident cap as determined under paragraph (c)(2) of this section for all three most recent cost reporting periods ending prior to March 23, 2010 (as described under section (iv) of this paragraph), is exempt from any reduction to its otherwise applicable FTE resident cap under paragraph (m) of this section." Therefore, if a hospital is training at or above its caps in each (that is, all) of its three most recent cost reporting periods used to determine the hospital's reference resident level, it would be exempt from a cap reduction.

In response to the commenter's concern that previously the Provider Reimbursement Manual provided guidance for auditors and that, in recent years, Medicare has substituted instructions in the Provider Reimbursement Manual with preamble language, we intend to issue additional instructions to Medicare contractors that will provide further instructions regarding the implementation of section 1886(h)(8) of the Act. Additionally, we encourage Medicare contractors to contact us if they have questions regarding the situation of a specific hospital.

Comment: One commenter stated that, as is probably true for other academic medical centers, it has experienced a number of changes over time concerning the GME programs it sponsors. For the commenter, these changes have resulted in a reduction in the number of FTE residents it is training from its 1996 base year. The commenter stated that its affiliations with other institutions also have changed; specifically, it had previously affiliated with an institution in Maryland but is currently in its third year of participating in a Medicare GME affiliation agreement with an institution in Virginia. The commenter stated that, because of this history, it is concerned with the way that CMS is proposing to implement section 5503 of the Affordable Care Act and that the proposed calculation of the otherwise applicable resident limit may result in an unnecessary reduction to its FTE cap. The commenter believed that the three cost reporting periods used to determine its reference cost reporting periods would be FYEs June 30, 2007, June 30, 2008, and June 30, 2009; however, its Medicare GME affiliation agreement has only been in place for the July 1, 2008–June 30, 2009 cost reporting period. The commenter believed that this period is its period with the highest FTE resident count. However, the commenter indicated that it realizes that, through the unpredictable audit process, the June 30, 2007 FYE or June 30, 2008 FYE could become the reference cost reporting period. Therefore, the commenter believed it is possible that the hospital's reference cost reporting period could be a cost reporting period in which it was participating in a Medicare GME affiliated group under which the cap reduction would be higher than if it was based on a cost reporting period where there was the smallest difference between the cap and the count. The commenter stated "[a]lthough CMS has proposed that there be a 'matching' of the year used to determine both the reference resident level and the otherwise applicable resident limit, governing legal authority does not compel such a policy." The commenter stated that, in the proposed rule, CMS inferred that the data used to determine the reference resident level and the otherwise applicable resident limit are to come from the same cost reporting period. The commenter believed that if a hospital entered into a Medicare GME affiliation agreement in the cost reporting period with the highest FTE resident count, the hospital's adjusted cap would be used to determine a cap reduction but if the hospital did not participate in a Medicare GME affiliated group during that year, its unadjusted cap would be used to determine the cap reduction. The commenter stated that if the hospital is not participating in a Medicare GME affiliated group, its unadjusted cap would be used even if the hospital participated in a Medicare GME affiliated group in one of the other two cost reporting periods, which resulted in a smaller difference between the cap and the count. The commenter stated CMS did not include the rationale for such a policy in the proposed rule. The commenter presented several options for CMS to consider regarding how to calculate cap reductions under section 5503.

The commenter stated that one alternative would be to determine whether a hospital should receive a cap reduction using the year in which there is the least amount of difference between the cap and the count. The commenter stated that although the statute defines the "reference resident level" as "the highest resident level for any of the 3 most recent cost reporting periods," "the literal wording of the statute is at odds with its manifest intent." The commenter stated that Congress' goal in using the highest FTE resident count included in the three most recent cost reporting periods ending before March 23, 2010, is to make sure hospitals receive the minimum cap reduction reasonable based on recent data. The commenter asserted that because the literal reading of the statute is at odds with its "manifest intent," CMS is permitted and expected to interpret the statute in a manner that more closely reflects its purpose. The commenter referenced the court case in *American Water Works Association* v. *Environmental Protection Agency* (40 F.3d 1266, 1271 (D.C. Cir. 1994). The commenter described this case as "deferring to the agency, which prioritized a statute's overarching intent over its literal wording, where that wording would have led to 'absurd results.'"

The commenter offered a second option under which CMS could finalize a policy in which the otherwise applicable resident limit would be determined to be the lowest FTE cap from any of the three most recent cost reporting periods ending prior to March 23, 2010. The commenter stated that Congress was silent on which year should be used to determine the otherwise applicable resident limit; therefore, CMS has the discretion to decide which year to use for this limit. The commenter stated "CMS can, however, glean congressional intent from the definition of reference resident level, which relies on a 3-year look-back to properly protect hospitals from excessive FTE cap reductions. Using the lowest FTE cap of the prior three years would therefore appropriately mirror the reference resident level provisions."

The commenter gave a third option under which CMS could use the FTE cap that a hospital had on the date of enactment to determine whether a hospital should receive a cap reduction. In describing this option, the commenter referred to the court case in *Johnson* v. *United States* (529 U.S. 694, 702 (2000)). In reference to this case, the commenter stated "finding that the effective date for a statute, where Congress gives no clear direction, is the date of enactment." The commenter stated that, under this option, if a hospital was participating in a Medicare GME affiliation agreement on March 23, 2010, CMS could use the cap as adjusted per that affiliation agreement for purposes of determining whether a hospital should receive a cap reduction. The commenter indicated that, under this proposal, any amendments made to the Medicare GME affiliation agreement prior to July 1, 2010, could also be taken into account (because hospitals are able to amend their Medicare GME affiliation agreements through June 30 of the

academic year for which they are effective).

The final option suggested by the commenter was to consider a hospital's participation in a Medicare GME affiliated group if it was participating in a Medicare GME affiliation agreement either in the year the hospital had its highest FTE resident count or the date of enactment (March 23, 2010). The commenter suggested that if a hospital participated in a Medicare GME affiliated group in both years, CMS could use the lower of either of the two caps for determining whether the hospital should receive a cap reduction.

Response: We do not agree with the commenter's statement that although CMS proposed that the reference resident level and otherwise applicable resident limit come from the same cost reporting period, that legal authority does not require such a policy. We do not understand how comparing the FTE resident cap and FTE resident count from two separate cost reporting periods would provide for a valid comparison because both a hospital's FTE resident cap and its FTE resident count, for numerous reasons, could change from year to year and would not necessarily be a measure of excess capacity. Therefore, in this final rule, we are clarifying that the reference resident level and otherwise applicable resident level used to determine whether a hospital has any unused cap, must come from the same cost reporting period. As discussed later in this preamble, the cost reporting period that is used to determine whether a hospital will receive a cap reduction under section 5503 of the Affordable Care Act, must be based on a cost report that is settled or has been submitted to the Medicare contractor by March 23, 2010. In addition, the statute requires that the Secretary take "the highest resident level" from the applicable reference period, and compare that level to the hospital's otherwise applicable resident limit. The statute does not include language that would allow the Secretary to determine that the reference cost reporting period for hospitals is the cost reporting period where there is the least amount of difference between the FTE resident count and the cap.

Comment: One commenter stated that Congress' intent in specifying the use of the three most recent cost reporting periods was "to make it clear that it wanted CMS to consider the three most recent completed cost report years for which data would be available for each hospital prior to the enactment of the ACA." The commenter stated that this approach would ensure that CMS was working with the most up-to-date data so that inappropriate cap redistributions would not be made based on data from older cost reporting periods. The commenter stated there was some vagueness in the proposed rule regarding the application of cap reductions to hospitals that have a cost reporting period that corresponds to the calendar year. Specifically, the commenter indicated that there is a concern for the January 1, 2009 through December 31, 2009 cost reporting period because these providers would not be required to submit their cost report to their Medicare contractor until May 31, 2010.

Commenters requested that CMS confirm that its contractors will be directed to include the cost reporting period ending December 31, 2009 in their review of the three most recent cost reporting periods. One commenter specifically requested that a hospital with a fiscal year of January 1–December 31 be able to use its December 31, 2009 FYE cost reporting period as one of the hospital's three most recent cost reporting periods as long as the hospital has submitted its December 31, 2009 FYE cost report by the time the audit of the hospital's FTE count has taken place. Another commenter stated that the 3-year look-back period used to determine cap reductions may disadvantage those hospitals that attempted to fill unused FTE resident slots after the Affordable Care Act was enacted. The commenter stated that, while generally the 3-year look-back period would be acceptable, because of the timing of the enactment of the Affordable Care Act in late March, the end of resident recruitment in June 2010, and the date of issuance of the proposed rule, some hospitals, in an effort to preserve their FTE resident slots, may have interviewed and hired additional residents for their current academic year. The commenter requested that CMS include as part of the 3-year look-back period, the count of residents included in the current academic year, that is July 1, 2010–June 30, 2011, so that hospitals that acted as quickly as possible to fill their FTE slots, especially slots associated with primary care programs, are not penalized for their actions.

One commenter indicated that recent developments have caused a change in the number of residents training at its hospital; specifically, a realignment of affiliations has caused a decrease in the number of residents the medical school rotates to the hospital. However, in its efforts to meet the community's needs and provide high quality medical care, the commenter indicated that the hospital has established several new programs, is starting one new residency program this year, and is in the process of receiving accreditation for nine new programs, which will start in the next 5 years. The commenter stated that, as a member of one Medicare GME affiliated group, it reduced its caps for the benefit of the other participant in the affiliated group. In another instance, where the hospital accepted displaced residents as part of an emergency Medicare GME affiliation agreement, the commenter indicated that, in order to provide a seamless transition to a new training site, the hospital did not have an opportunity to verify in advance if it needed any additional residency positions under its FTE cap. The commenter believed that, within a year, its count will at least equal its 1996 caps, and given that its FTE count reduction was only temporary, any permanent reduction to its FTE caps would result in financial hardship which could cause the hospital to have to reduce its caps and would be detrimental to the community. The commenter asserted that in the statutory definition of reference resident level, the phrase "(ending before the date of enactment of this paragraph)" modifies the phrase "3 most recent cost reporting periods." The commenter stated the FYE December 31, 2009 cost reporting period would be included in this definition of reference resident level because the January 1, 2009 through December 31, 2009 cost reporting period ended prior to March 23, 2010. The commenter believed that even though the statutory language refers to cost reports being settled or at least submitted, these requirements do not need to occur prior to March 23, 2010. The commenter believed that, considering the literal wording of the statute, the only requirement that must have been met prior to March 23, 2010 is that the cost report must have ended, submission of and settling of the cost report must only occur prior to CMS' determination of reductions. The commenter stated that the interpretation of the language included in section 5503 outlined in its comment letter is similar to the interpretation made by CMS of the language included in section 422 of the MMA. The commenter included the following language which refers to the definition of "reference resident level" under section 422 of the MMA:

"[T]he reference resident level specified in this clause for a hospital is the resident level for the most recent cost reporting period of the hospital ending on or before September 30, 2002, for which a cost report has been settled (or, if not, submitted (subject to audit)), as determined by the Secretary."

The commenter pointed out that CMS, in its proposed rulemaking, stated it would calculate the reduction in the number of FTE resident slots using the cost reporting period ending on or before September 30, 2002, using either a settled cost report or an as-submitted cost report, which would be subject to audit, and that CMS set a cut-off date of December 2005 as the date by which the cost report submission and audit would be completed. The commenter stated that, under section 422, there was no express cut-off date by which the reference cost report was required to be submitted, and there was certainly not a cut-off date of before September 30, 2002. The commenter stated that, for purposes of section 422, CMS' primary concern was timely audit of the cost report for the reference cost reporting period. The commenter asserted that a similar approach could be applied to using the cost reporting period January 1, 2009–December 31, 2009 to determine reductions under section 5503. The commenter stated that because CMS stated in the proposed rule that it expects decisions to be made about cap reductions by December 2011, Medicare contractors will have 19 months to review, audit, and finalize audit adjustments to cost reports for the January 1, 2009 through December 31, 2009 cost reporting period. The commenter believed that there is nothing preventing CMS from maintaining consistency with implementation of section 422 of the MMA by including the January 1, 2009–December 31, 2009 cost reporting period as a cost reporting period that can be used to determine a hospital's reference resident level.

Response: We do not agree that the cost reporting period of January 1, 2009–December 31, 2009 should be included in the group of the three cost reporting periods used to determine whether a hospital will receive a cap reduction under section 1886(h)(8)(A) of the Act. We believe that the cost reports used to determine whether a hospital will receive a cap reduction must, at the very least, have been submitted to the Medicare contractor as of March 23, 2010. Furthermore, we do not believe it would be appropriate to include in the determination of which cost reports are used to establish a hospital's reference resident level, those cost reporting periods that occurred at the time the Affordable Care Act was in development. Rather the cost reporting period used to determine the reference resident level should be a cost reporting period that reflects a number of FTE residents that a hospital is accustomed to training, not a number of FTE residents that is based on a hospital's rushed attempt to avoid a cap reduction. Therefore, we also disagree with the commenter who requested that CMS include, as part of the 3-year look-back period, the count of residents included in the July 1, 2010–June 30, 2011 academic year. Additionally, this cost reporting period does not end prior to March 23, 2010.

In response to the commenter who suggested that CMS follow a similar process for determining a hospital's reference resident level for purposes of section 5503 of the Affordable Care Act as it did for section 422 of the MMA, we note that the time period for implementing section 5503 of the Affordable Care Act is shorter than the time that was available to implement section 422 of the MMA. In general, the cost reporting period used to determine the reference resident level under section 422 was the most recent cost reporting period ending on or before September 30, 2002. Public Law 108–173, which included section 422, was enacted on December 8, 2003. Therefore, in general, the cost reports used to determine the reference resident level for section 422 had already been submitted at the time Public Law 108–173 was enacted. For purposes of section 5503 of the Affordable Care, a cost report for the cost reporting period January 1, 2009–December 31, 2009, would likely not have been submitted by March 23, 2010, the time section 5503 of the Affordable Care Act was enacted. Therefore, in this final rule, we are clarifying that the three most recent cost reports used to determine a hospital's reference resident level must be cost reports that, if not settled, have been submitted to the Medicare contractor by March 23, 2010. We also are clarifying our regulation text at § 413.79(c)(1)(ii)(B) to state: "For purposes of paragraph (m) of this section, *reference resident level* means with respect to a hospital, the highest resident level for any of the three most recent cost reporting periods ending before March 23, 2010, for which a cost report has been either settled or submitted (subject to audit) to the Medicare contractor by March 23, 2010." In addition, as we explain in response to comments below regarding the cost report data that must be submitted with a hospital's application for additional slots and the cost reports used to establish a hospital's primary care average under section 1886(h)(8)(B)(ii)(I) of the Act, these cost reports must also be submitted to the Medicare contractor by March 23, 2010.

Comment: Several commenters asked for clarification on the application of cap reductions to new teaching hospitals. The commenters believed that the final rule should clarify that hospitals which have had their cap established during the last three cost reporting periods ending prior to March 23, 2010, and those new teaching hospitals that do not yet have a cap established because they are in the middle of the three year cap building period should be exempt from any cap reduction. The commenters believed that these new teaching hospitals should not have their caps reduced under section 1886(h)(8)(A) of the Act because they are still in the process of building their residency training programs, especially those residency programs that have an initial residency period of longer than 3 years; therefore, these hospitals should not lose any cap which they are in the process of establishing.

Response: We agree with the commenters that new teaching hospitals should not have their caps reduced if the hospitals are still in the process of establishing their cap and that some new teaching hospitals may still be in the process of growing their new program(s), particularly if the new program(s) has an initial residency period of greater than 3 years. Because Congress specifically required the Secretary to consider three cost reporting periods to determine which cost reporting period would be the reference cost reporting period based on the period with the highest resident level, we do not believe it would be appropriate to consider whether a new teaching hospital, with less than three years of cap data, should receive a cap reduction. Therefore, we are clarifying in this final rule that those teaching hospitals that do not yet have a cap established for Medicare payment purposes because they are in the middle of their 3-year cap building period will be exempt from a cap reduction. Additionally, we understand the commenters' concerns regarding new teaching hospitals that have a cap established but are still in the process of growing their program because the initial residency period of the program is greater than 3 years. Therefore, after considering these comments, we are finalizing the policy that if a new teaching hospital has submitted cost reports for its three most recent cost reporting periods ending before March 23, 2010, by March 23, 2010, but a cap is not applied in *all three* of those cost reporting periods, the new teaching hospital would be exempt from a cap

reduction. For example, if a new teaching hospital submitted three cost reports by March 23, 2010, but a cap was only applied to the hospital in two of the three cost reports, the new teaching hospital would be exempt from a cap reduction. We are revising the regulations at § 413.79(m) to reflect this change.

Comment: One commenter stated there was nothing in the proposed rule that exempted a hospital located in Louisiana, which was devastated by Hurricane Katrina, from a cap reduction under section 1886(h)(8)(A) of the Act. The commenter stated that, as a result of the devastation to its facilities caused by Hurricane Katrina, the hospital loaned 300 of its 573 FTE cap slots to other facilities located mostly in the New Orleans area through emergency Medicare GME affiliation agreements. The commenter stated that its hospital is in the process of rebuilding, and if the facility's 300 FTE cap slots are not exempt from the resident redistribution, redistributing these slots to other hospitals would be devastating to the New Orleans area and to the facility's rebuilding process.

Response: The statute does not provide for a specific exemption from a cap reduction for those hospitals affected by Hurricane Katrina. However, we note that, in our discussion regarding cap increases under section 5503 of the Affordable Care Act, the State of Louisiana is indicated as a State that can apply for additional slots.

b. Audits of the Reference Cost Reporting Periods

As mentioned under XXI.D.8.a. of this preamble, to determine a possible reduction to a hospital's FTE resident cap, section 1886(h)(8)(H)(i) of the Act, as added by section 5503(a) of Affordable Care Act, directs the Secretary to use, as the reference cost report, the one cost report out of the hospital's three most recent cost reporting periods ending before March 23, 2010, with the highest resident count "for which a cost report has been *settled* (or, *if not, submitted (subject to audit*), as determined by the Secretary" (emphasis added). In the August 3, 2010 proposed rule (75 FR 46394 and 46395), we proposed that if a hospital's cost report for the reference cost reporting period has been settled, the hospital's settled cost report, without further audit, would be used to determine possible reductions to the FTE resident caps. We noted that the "settled" cost report does not necessarily mean the initial cost report settlement. The Medicare contractor may have previously settled the cost report, reopened it to audit it, and then settled the cost report again, issuing a revised NPR. Thus, we would refer to the most recently issued NPR for that cost reporting period (prior to March 23, 2010). For those cost reporting periods that would be used as the reference cost reporting period, which have been submitted to the Medicare contractor but not settled, Medicare contractors may perform desk or onsite audits related to section 5503. In addition, if the reference period cost report is for a period other than 12 months, we proposed that for direct GME, the Medicare contractor would prorate the FTE resident caps and unweighted FTE resident count to equal 12-month counts.

We did not receive public comments specific to this section. Therefore, we are finalizing the stated policy as proposed.

c. Medicare GME Affiliation Agreements

As described above, some hospitals that have resident levels below their FTE resident caps may have entered into Medicare GME affiliation agreements (as permitted under § 413.79(f) of our regulations) with other hospitals that would otherwise exceed their FTE resident caps. Thus, while some hospitals in the Medicare GME affiliated group were training a number of residents below their FTE resident caps prior to entering into a Medicare GME affiliation agreement, upon affiliating, their FTE resident caps were temporarily reduced because some or all of their excess FTE slots were temporarily added to the FTE resident caps of other hospitals as part of the affiliation agreement. Under section 422 of Public Law 108–173, the statute explicitly directed the Secretary to apply the provisions to hospitals that were members of the same affiliated group as of July 1, 2003. Specifically, section 1886(h)(7)(A)(iii) of the Act states "The provisions of clause (i) shall be applied to hospitals which are members of the same affiliated group (as defined by the Secretary under paragraph (4)(H)(ii)) as of July 1, 2003." Therefore, in implementing section 422, we based the FTE resident cap reductions for hospitals that were participating in a Medicare GME affiliated group on the aggregate cap and count data from all hospitals participating in the same Medicare GME affiliated group(s). If a hospital was training a number of residents below its FTE resident cap for the reference cost reporting period but the hospital was part of a Medicare GME affiliated group for some or all of that reference cost reporting period, the Medicare contractor determined if the aggregate affiliated count for all hospitals in the affiliated group was greater than the aggregate affiliated cap. If the aggregate affiliated count was greater than the aggregate cap, then there was no reduction made to the FTE caps of any hospital in the affiliated group (even for the hospital that was part of the affiliated group, but was training below its cap). However, we note that, in contrast to section 422 of Public Law 108–173, section 5503 of the Affordable Care Act does not include language specific to affiliated groups as was included in section 422 under section 1886(h)(7)(A)(iii) of the Act. Thus, section 5503 of the Affordable Care Act does not provide for determinations based on the aggregate experience of a Medicare GME affiliated group. In addition, section 1886(h)(8)(H) of the Act, as added by section 5503 of the Affordable Care Act, defines the reference resident level and the otherwise applicable resident limit with respect to "a hospital." Similarly, section 1886(h)(8)(A) of the Act refers only to "a hospital's" reference resident level. Therefore, we are determining whether a hospital should receive a cap reduction based on that individual hospital's experience and not the aggregate experience of the Medicare GME affiliated group. Therefore, in the August 3, 2010 proposed rule (75 FR 46395), we proposed that Medicare contractors would make determinations regarding FTE cap reductions under section 1886(h)(8)(A)(i) of the Act by considering the relationship of the individual hospital's otherwise applicable resident limit for the reference period (which is the FTE resident cap for a period as adjusted by any affiliation agreement(s)) to the individual hospital's reference resident level. That is, we proposed that in a hospital's reference year, if that hospital is participating in a Medicare GME affiliated group and is training a number of residents below its FTE caps as adjusted pursuant to any affiliation agreements which can be found on Worksheet E, Part A, line 3.06 for IME, and Worksheet E–3 Part IV, line 3.03 for direct GME, the hospital's FTE resident caps would be subject to a reduction under section 1886(h)(8)(A)(i) even if the Medicare GME affiliated group as a whole may be training a number of residents above the group's aggregate FTE resident cap.

Comment: Many commenters addressed the proposed policies regarding the treatment of affiliated groups in determining whether a hospital would receive a cap reduction

under section 1886(h)(8)(A) of the Act. Commenters supported the proposal to account for a hospital's participation in a Medicare GME affiliated group during its reference year. One commenter stated that, in finalizing the proposal to consider a hospital's participation in a Medicare GME affiliated group during its reference year, it will be important for the Secretary to recognize the hospital's cap as reduced due to participation in a Medicare GME affiliated group before comparing the hospital's count to its cap during the reference cost reporting year. Commenters disagreed with the proposal to not consider aggregated caps and counts of a Medicare GME affiliated group when determining if an individual hospital would receive a cap reduction. Commenters stated that if CMS does not consider affiliated groups as a whole when determining cap reductions, entire residency programs could be lost, each hospital participating in an affiliated group could be negatively affected, and training relationships could be damaged.

One commenter addressed the situation of a specific Medicare GME affiliated group. The commenter stated that a hospital in Iowa is receiving a temporary cap increase through participation in the Medicare GME affiliated group. The commenter asserted that if the hospital that is transferring cap receives a cap reduction, the existence of the entire residency program could be put in jeopardy because the residents may no longer be able to rotate to various sites. One commenter stated that the purpose of Medicare GME affiliation agreements is to allow for transfer of the cap to appropriate hospitals to provide residents with opportunities for additional training. The commenter believed that, in keeping with the spirit of the law, the resident level and limit should be calculated in aggregate for all hospitals participating in a Medicare GME affiliated group. Another commenter stated that hospitals that are complying with the regulations at § 413.75 should only receive cap reductions under section 5503 after looking at the aggregate affiliated cap. The commenter noted that it has sponsorship under the ACGME for programs at hospitals included in its affiliated group and that such sponsorship supports the position that hospitals' caps and counts should be looked at in the aggregate. The commenter stated that because CMS proposed to look at an individual hospital's cap as adjusted for any Medicare GME affiliation agreements, such a proposal indicates that CMS recognizes the potential impact affiliation agreements may have on hospitals' caps, and, therefore, CMS should apply the same policy for treatment of affiliated groups to section 5503 as it did for section 422 of the MMA. Other commenters also suggested CMS be consistent in its policies and follow the precedent set for treatment of Medicare GME affiliated groups under the implementation of section 422 of the MMA. Another commenter stated that affiliation agreements are intended to provide stability and address changes in rotations and programs for participating hospitals and that CMS should make sure that FTE caps are not unintentionally removed from an affiliated group.

Many commenters stated that redistributing slots used through a Medicare GME affiliation agreement was not the intent of Congress. Rather, the commenters believed that Congress' intent was only to redistribute those slots which are "unused." The commenters stated that if the affiliated group as a whole is over its cap, the slots are clearly being used. One commenter stated that, in addressing the implementation of section 5503, Congress was certainly knowledgeable about the common practice of hospitals participating in Medicare GME affiliation agreements to "share" FTE slots to maximize the training of residents and of the FTE slots. The commenter stated "Under any common language meaning of the term 'unused,' FTE cap slots that are shared among hospitals in GME affiliated groups would not be considered 'unused positions.'" Some commenters noted that they plan to work to correct the statutory problem of not considering the aggregated caps and counts of hospitals participating in a Medicare GME affiliated group. Commenters stated that, although they appreciated that CMS is using adjusted cap numbers in situations where hospitals share cap through a Medicare GME affiliated group, the initial cap and count comparison should be made at the affiliated group level. The commenters stated that performing an initial comparison of the affiliated group's cap and count is supported by the statutory definition of "otherwise applicable resident limit" included in the Affordable Care Act, which states:

"The term 'otherwise applicable resident limit' means, with respect to a hospital, the limit otherwise applicable under subparagraphs (F)(i) and (H) of paragraph (4) on the resident level for the hospital determined without regard to this paragraph but taking into account paragraph (7)(A)."

The commenters also referred to language from paragraph (h)(4)(H) of section 1886 of the Act:

"(ii) Aggregation—The Secretary may prescribe rules which allow institutions which are members of the same affiliated group (as defined by the Secretary) to elect to apply the limitation of subparagraph (F) on an aggregate basis."

The commenters believed that because CMS has the authority to "prescribe rules" concerning GME affiliated groups, CMS has the authority to view the affiliated group as a whole for purposes of determining cap reductions under section 1886(h)(8)(A) of the Act.

One commenter recommended that CMS finalize a policy for treatment of affiliated groups such that in the case where the aggregate count is above the aggregate cap in any of the 3 years, none of the hospitals participating in the Medicare GME affiliated group would receive a cap reduction. The commenter stated "* * * that surprising and counterintuitive outcomes may result when CMS attempts to compare an individual hospital's affiliated cap and count for just one year and then apply that result to the individual hospital's unaffiliated cap." The commenter noted there have been situations where agreements to provide for educational rotations among hospitals have "worked to the (permanent) detriment of a hospital when reduction determinations have been made." Therefore, the commenter believed that it is important for CMS to include safeguards such that inappropriate redistributions do not occur when reducing the caps of individual hospitals. The commenter believed that because Congress went out of its way to provide CMS with the opportunity to review 3 separate years instead of just 1 year for purposes of cap reductions under section 1886(h)(8)(A) of the Act, the intent of Congress was to clarify that if a hospital is training above its cap in *any* of its three most recent cost reporting periods, the hospital should not receive a cap reduction. The commenter noted that if a hospital's cap changes during the 3 years, for example through participation in a Medicare GME affiliated group, only considering the 1 year with the highest resident count "may cause different kinds of results for individual hospitals." The commenter suggested that, to determine whether a hospital should receive a cap reduction, the policy be that if a hospital is participating in a Medicare GME affiliated group, the year that is used to determine a cap reduction is the

year where there is the smallest gap between the aggregate cap and the aggregate count.

One commenter stated that if two hospitals participate in a Medicare GME affiliated group, under the proposed rule, these hospitals may be penalized for their participation because one hospital is going to be training residents over its cap while the other hospital is going to be training residents under its cap. The commenter gave an example where hospital A and hospital B are participating in a Medicare GME affiliated group and hospital A's cap prior to the affiliation was 50 and hospital B's cap prior to the affiliation agreement was 100. Under the commenter's example, hospital A transfers 10 cap slots to hospital B for FYEs 2006–2008 such that during the affiliation agreements, hospital A's FTE resident count is 40 and hospital B's FTE resident count is 110. The commenter stated that during the Medicare GME affiliation agreement, the aggregate count is 150 and the aggregate cap is 150, but based on CMS' proposed rule, hospital A's cap would be reduced by 6.5 FTEs. The commenter questioned why hospitals should be penalized if they enter into Medicare GME affiliated groups and maintained an aggregate count that is the same as the aggregate cap. Another commenter stated that many teaching hospitals affiliated with colleges of osteopathic medicine train residents in rural and underserved areas and that even though rural hospitals with fewer than 250 beds may be exempt from a cap reduction, those hospitals may be negatively impacted if the hospitals with which they affiliate have their caps reduced. The commenter stated that reducing the caps of hospitals with which these rural hospitals are affiliated could limit access to patient care in areas where these providers are needed to provide care. The commenter requested that CMS reconsider its policy regarding cap reductions so that areas served by osteopathic training programs that are in greatest need of physicians are not limited.

Commenters reasoned that if a hospital is participating in a Medicare GME affiliated group and is training below its cap, the hospital that is receiving the temporary cap adjustment through the Medicare GME affiliation agreement would be the facility that receives a cap reduction and not the hospital that loaned slots through the Medicare GME affiliation agreement. The commenters requested clarification on this assumption. One commenter stated that not considering the affiliated group as a whole could potentially lead to not recapturing all of the unused cap slots in the situation where a hospital without a 1996 cap and without a new program cap is part of a GME affiliated group due to a shared rotational arrangement. The commenter stated, "If the hospital's FTE count exceeded its cap affiliation adjustment, the hospital has no 1996 cap or new program cap that could be reduced to effect a cap recapture."

One commenter requested that, for purposes of the cap redistribution under section 5503 of the Affordable Care Act, CMS take into consideration the shared rotational agreement its hospital has had with another hospital since 1993 ("1993 Agreement"), even though the shared rotational agreement did not comply with the requirements of a Medicare GME affiliated group until July 1, 2009. The commenter suggested that, in the alternative, if CMS does not consider the shared rotational arrangement that has been in place between the two hospitals since 1993, CMS at the very least maintain the status quo by considering the fact that these two hospitals have in place fully compliant Medicare GME affiliation agreements for academic years July 1, 2009 through June 30, 2011, which reflect the hospitals' longstanding practice of rotating the residents between the two facilities. The commenter stated that if CMS does not change its proposed rule as presented in the comment, one of the hospitals participating in the shared rotational arrangement will be subject to a large cap reduction, which in turn will place the longstanding training relationship between the two hospitals at risk. The commenter stated that one of the hospitals that participates in the shared rotational arrangement and the county jointly sponsor about 54 primary care and subspecialty residency training programs, and approximately 900 residents participate in these programs, with 500 of these residents also training at the second hospital participating in the shared rotational arrangement. The commenter stated that both hospitals serve a broad demographic of patients throughout the State of California, and both offer specialized and advanced services that provide residents with a variety of educational opportunities. The commenter stated that the "1993 Agreement" provided for a "bilateral exchange" of residents, and that, without this exchange, certain ACGME opportunities would not be available because the hospitals offer different services. The commenter stated that the sending hospital employs the residents but the receiving hospital is financially responsible for the cost of the residents' salaries and fringe benefits for the time that the residents spend at the receiving hospital. The commenter stated that the "1993 Agreement" was in place before direct GME and IME caps or the concept of a Medicare GME affiliation agreement, and although it does not meet all the regulatory requirements of a Medicare GME affiliation agreement, it has been in place for more than 17 years, including what will be one of the hospital's reference periods. The commenter stated that because the "1993 Agreement" did not include all the elements of a Medicare GME affiliation agreement, one of the hospitals was not eligible to receive payment for about half of the 90 FTEs it trained in FYEs May 31, 2007 through May 31, 2009. However, the commenter stated this problem was mostly corrected when both facilities entered into a Medicare GME affiliation agreement effective with the July 1, 2009 training year. The commenter stated that the analysis applied to the cap reductions "* * * should focus on *use* of the FTE slots and whether, in practice and pursuant to a written agreement that is akin to a Medicare GME affiliation agreement, the hospitals were transferring FTEs." The commenter stated that the legislative history does not indicate that Congress wanted to disturb existing training relationships or not provide for payment where there were, in fact, residents providing care to Medicare beneficiaries but rather the purpose of section 1886(h)(8) of the Act is to transfer FTE slots from facilities that are not providing training to those that are. The commenter stated that CMS could view the hospitals' situation one of two ways, either that the FTE slots that went to the receiving hospital were slots that were in use by the sending hospital, or that the hospitals had in place a shared rotational arrangement that basically complied with the requirements of a Medicare GME affiliation agreement and under these circumstances the sending hospital's cap was reduced by 70 or 80 FTEs through the transfer agreement. The commenter stated that, under either approach, the hospital that has been sending its FTE residents to the second facility is not presumed to have an extra gap of 70 to 80 FTEs between its reference resident level and its otherwise applicable resident limit because those 70 or 80 FTEs were being used at the receiving facility and being used pursuant to a written affiliation agreement. The commenter stated that if CMS chooses not to take into account the shared rotational agreement between the two hospitals and that the agreement

was in effect during the reference period, then, at the very least, CMS should preserve the current status quo based on the Medicare GME affiliation agreement in place during the current and prior academic years. The commenter indicated that, given the July 1, 2009–June 30, 2010 Medicare GME affiliation agreement was executed well before Congress authored the Affordable Care Act and covers part of one of the hospital's fiscal year ending before March 2010, CMS should take this agreement into account when determining which hospitals will receive cap reductions. The commenter also noted the two hospitals have entered into a Medicare GME affiliation agreement effective July 1, 2010 through June 30, 2011, which transfers the same number of FTEs as the July 1, 2009–June 30, 2010 Medicare GME affiliation agreement. The commenter stated that the Medicare GME affiliation agreement that is in place now will renew automatically and will continue unless CMS redistributes the slots. The commenter stated that, in addition to considering the formal FTE cap adjustments that make changes to hospitals' cost report worksheets on Worksheets E, Part A and E–3 Part IV, CMS could also consider shared rotational agreements that had the same effect. The commenter also stated that CMS could require, as part of the audit process, that providers submit to their Medicare contractor relevant written agreements and documentation regarding the exact number of FTEs exchanged between the two hospitals.

Response: We appreciate the commenters' support of the proposed policy to account for an individual hospital's participation in a Medicare GME affiliated group for purposes of determining that hospital's otherwise applicable resident limit. In response to the commenters who stated CMS should apply the same policy for determining whether a hospital that is participating in a Medicare GME affiliated group would receive a cap reduction, as was applied for purposes of implementing section 422, specific statutory language was included in section 422, which referred to Medicare GME affiliations. Section 422 amended section 1886(h) of the Act, by adding paragraph (7)(A)(iii) which stated "[t]he provisions of clause (i) shall be applied to hospitals which are members of the same affiliated group (as defined under paragraph (4)(H)(ii)) as of July 1, 2003." Neither this same statutory language nor similar language addressing Medicare GME affiliated groups was included in section 5503 of the Affordable Care Act. As we stated in the proposed rule, the definition of "otherwise applicable resident limit" does not include language that can support a policy allowing Medicare contractors to look at the Medicare GME affiliated group in the aggregate before determining whether an individual hospital would receive a cap reduction based on its participation in the affiliated group. Rather, in the definition of "otherwise applicable resident limit" in section 5503, the statute refers to "a hospital." Although the commenters noted that the definition of "otherwise applicable resident limit" refers to section 1886(h)(4)(H) of the Act, which includes at paragraph (ii) the following language: "[t]he Secretary may prescribe rules which allow institutions which are members of the same affiliated group (as defined by the Secretary) to elect to apply the limitation of subparagraph (F) on an aggregate basis," the reference made to prescribing rules for Medicare GME affiliation agreements refers to developing regulations to implement how each hospital's cap can be adjusted for its participation in a Medicare GME affiliated group. The language at section 1886(h)(4)(H)(ii) of the Act does not give the Secretary the authority to prescribe rules for treatment of Medicare GME affiliated groups under section 1886(h)(8)(A) of the Act. Furthermore, section 1886(h)(4)(H)(ii) of the Act was not amended after implementation of section 422 to provide the Secretary with the authority to prescribe specific rules for the treatment of Medicare GME affiliated groups for purposes of determining cap reductions under section 422. The lack of amendments made to section 1886(h)(4)(H) of the Act as a result of section 422 is further evidence that the reference to section 1886(h)(4)(H) of the Act in the definition of "otherwise applicable resident limit" under section 5503 is not intended to give the Secretary the authority to prescribe specific rules for the treatment of Medicare GME affiliated groups under section 5503 by mention of section 1886(h)(4)(H)(ii) of the Act. Rather, the reference to section 1886(h)(4)(h)(ii) of the Act is to require the Secretary to consider the hospital's cap *after* any adjustment agreed to in an affiliation agreement in determining the hospital's "otherwise applicable resident limit." To do otherwise, in a situation where a hospital has "affiliated away" some of its slots and trained up to its revised cap, would force the hospital to lose some of its "excess," even though in the year of the affiliation after reducing its cap in the affiliation, it had no excess.

In response to the commenter who stated that, under the proposed rule, if two hospitals are participating in a Medicare GME affiliated group, one hospital would be penalized for its participation because one hospital would be training below its cap and the other hospital would be training above its cap, we stated in the proposed rule that a hospital's otherwise applicable resident limit would generally be its 1996 cap adjusted for several criteria, including a hospital's participation in a Medicare GME affiliation agreement. Therefore, if a hospital's cap is temporarily reduced because it is transferring some of its cap slots to another hospital as part of a Medicare GME affiliation agreement, the hospital must only be concerned with a cap reduction if during its reference cost reporting period its reference resident level is below its adjusted cap, "the otherwise applicable resident limit." In the commenter's example, hospital A and hospital B are participating in a Medicare GME affiliated group and have caps of 50 and 100, respectively. As part of the Medicare GME affiliation, hospital A transfers 10 cap slots to hospital B so that for purposes of the Medicare GME affiliated group, hospital A's adjusted cap is 40 and hospital B's adjusted cap is 110. If hospital A and hospital B are participating in this Medicare GME affiliated group during their reference cost reporting period, hospital A would only have to be concerned with a cap reduction if its highest FTE resident count in its reference cost reporting period was less than 40 and hospital B would only have to be concerned with a cap reduction if its highest FTE resident count in its reference cost report was less than 110.

In response to the commenter who stated that, even though rural hospitals with fewer than 250 beds would be exempt from a cap reduction under section 1886(h)(8)(A) of the Act, those hospitals would be negatively affected if the hospital(s) with which they affiliate have their caps reduced, we appreciate the commenter's concern to ensure that access to care is not limited in rural and underserved areas as a result of section 5503. However, section 1886(h)(8)(A) of the Act does not provide for a specific exemption for urban hospitals that participate in Medicare GME affiliated groups with rural hospitals with fewer than 250 beds. We note that the application for receiving cap slots under section 1886(h)(8) of the Act includes the following Evaluation Criterion, which specifically addresses residency training in rural areas: The hospital is in a rural area (as defined under section

1886(d)(2)(D)(ii) of the Act) and is or will be on or after July 1, 2011, a training site for a rural track residency program (as specified under § 413.79(k)), but is unable to count all of the FTE residents training in the rural track because the rural hospital's FTE cap is lower than its unweighted count of allopathic or osteopathic FTE residents as of portions of cost reporting periods on or after July 1, 2011. Furthermore, we note that, under the regulations at § 413.79(e)(1)(iii) a rural hospital can always receive a permanent cap adjustment for training residents in a new residency training program.

In response to the commenter who asked for clarification as to whether, if a hospital received FTE cap slots through participation in a Medicare GME affiliated group but was training below its cap adjusted under the Medicare GME affiliation agreement during its reference cost reporting period, we are clarifying that the hospital that received the cap slots or the hospital that loaned the cap slots would receive a cap reduction, the hospital that received the slots but is training below its adjusted cap would receive a cap reduction. The hospital that is transferring some of its FTE cap slots would not be penalized if the hospital to which it temporarily transferred some of its FTE cap slots is training below its adjusted cap during its reference cost reporting period.

In response to the commenter who stated "If the hospital's FTE count exceeded its cap affiliation adjustment, the hospital has no 1996 cap or new program cap that could be reduced to effect a cap recapture," in describing a hospital that has no 1996 cap or new program cap but receives cap slots as part of a Medicare GME affiliation agreement, we believe the commenter meant to describe the scenario as one in which a hospital does not have a 1996 cap or a new program cap and receives a temporary cap adjustment as part of a Medicare GME affiliated group but is training below its affiliated cap during its reference cost reporting period. Under this scenario, the commenter is correct that there would be no cap to recapture because the hospital does not have a base year cap to reduce. Rather, it only has a temporary cap due to its participation in the Medicare GME affiliated group, and section 1886(h)(8)(A) of the Act does not provide for the Secretary to look at a Medicare GME affiliated group as a whole for purposes of determining individual hospitals' cap reductions.

In response to the commenter who requested that CMS either take into consideration the shared rotational agreement it has had since 1993 with another hospital or maintain the status quo by considering the fact that these two hospitals have in place a fully compliant Medicare GME affiliation agreements for academic years July 1, 2009 through June 30, 2011, which reflect the hospitals' longstanding practice of rotating the residents between the two facilities, we appreciate the commenter's interest in maintaining its current level of training at its facilities. However, section 1886(h)(8)(A) of the Act does not provide the Secretary with the authority to provide an exception for these specific scenarios. Therefore, if either one of the hospitals participating in the shared rotational arrangement is training below its official adjusted cap during its reference cost reporting period, it would receive a cap reduction. The fact that the hospitals acted as if they had an affiliation agreement, as required by the regulations, is not a sufficient basis for revising the hospitals' caps.

After consideration of the public comments we received, we are finalizing our policy regarding treatment of Medicare GME affiliated groups as proposed. Specifically, we are finalizing our policy to state that, in a hospital's reference cost reporting period, if the hospital is participating in a Medicare GME affiliated group and is training a number of residents below its FTE caps, as adjusted under any affiliation agreements that can be found on Worksheet E, Part A, line 3.06 for IME, and Worksheet E–3 Part IV, line 3.03 for direct GME, the hospital's FTE resident caps would be subject to a reduction under section 1886(h)(8)(A)(i) of the Act, even if the Medicare GME affiliated group as a whole may be training a number of residents above the group's aggregate FTE resident cap.

d. Treatment of Hospitals That Have Merged

We note that there may be instances where two hospitals merge on or after March 23, 2010, but were not merged in any or all of their three most recent cost reporting periods ending before March 23, 2010. For these hospitals, in the August 3, 2010 proposed rule (75 FR 46395), we proposed that the Medicare contractors identify the hospitals' three most recent cost reporting periods ending before March 23, 2010, and treat the hospitals for purposes of section 1886(h)(8)(A)(i) of the Act as if they were merged during those periods in determining whether there should be a reduction to the merged facility's FTE resident cap(s). That is, we proposed that, for each of the 3 years, we would combine the FTE resident counts and caps of the formerly separate facilities in order to identify the reference period, and to calculate the reference resident level and the otherwise applicable resident limit for the merged facility (for IME and direct GME, respectively), even if the two facilities have different fiscal year ends. In addition, if any of the cost reporting periods are less than 12 months or greater than 13 months, the Medicare contractor would prorate the FTE resident counts and FTE caps for direct GME to equal a 12-month cost reporting period.

Comment: One commenter requested that hospitals that merged be allowed to use different cost reporting periods in determining whether the merged facility will receive an FTE cap reduction. The commenter stated that, for hospitals that have merged, the year with the highest reference resident level may not be the same year for all of the hospitals. The commenter believed that, to ensure there is the smallest reduction in hospitals' resident caps, the Secretary should permit different cost reporting periods to be used (as long as all of the years are within the periods contemplated by section 5003) when the hospital's FTE counts and caps are combined to determine whether the merged facility should receive a cap reduction. The commenter further believed that the final rule should address the treatment of hospitals that merged during the three most recent cost reporting periods ending before March 23, 2010. Commenters stated that the same policy that was proposed for hospitals that merge on or after March 23, 2010, should apply to hospitals that merged prior to March 23, 2010, as long as the merger occurred in any of the three most recent cost reporting periods ending before March 23, 2010.

Response: Although we had proposed to apply the proposed policy to hospitals that had merged on or after March 23, 2010, after consideration of the public comments we received, we believe the policy does not need to be applied to hospitals that merge on or after March 23, 2010. In fact, where two hospitals have three separate cost reporting periods that can be used to determine the hospitals' reference resident levels, we will determine the highest reference resident level and the otherwise applicable resident limit for each hospital separately, and then combine the determinations of any excess to apply to the merged hospitals, effective July 1, 2011. However, where for either 1 or 2 of the 3 years used to determine the reference resident level, the hospitals had merged, it will be necessary to determine 3 years of data

as if those hospitals had merged during all of those 3 years. In this final rule, we are revising the policy to reflect these changes.

9. Application of Section 5503 to Hospitals That File Low Utilization Medicare Cost Reports

In general, section 5503 of the Affordable Care Act applies to Medicare-participating hospitals that train residents in approved residency training programs. However, some Medicare-participating hospitals may choose to submit low utilization cost reports. These low utilization cost reports may not contain the cost report worksheet that is used to calculate payments for direct GME, Worksheet E–3 Part IV. That is, these cost reports may not contain FTE resident count and cap information. For example, because Medicare-participating children's hospitals primarily serve a non-Medicare population and, therefore, receive minimal Medicare payments, some teaching children's hospitals submit low utilization cost reports. If a children's hospital files a low utilization cost report in a given cost reporting period, and does not file the Worksheet E–3 Part IV, that hospital has no data to determine its reference resident level. In addition, although children's hospitals may have an FTE resident "cap" that is applicable for purposes of the Children's Hospital Graduate Medical Education (CHGME) Payment Program, administered by HRSA, this cap is not necessarily used for Medicare payment purposes. Therefore, in the August 3, 2010 proposed rule (75 FR 46395), we proposed that if a low utilization hospital does not have a cap for Medicare payment purposes, it would not be subject to a negative cap reduction under section 5503. In addition, we proposed that if a low utilization hospital does have a cap for Medicare payment purposes (for example, it had filed a regular cost report in 1996) but did *not* file Worksheet E–3 Part IV as part of its cost report in *all* of its three most recent cost reporting periods ending before March 23, 2010, it would be exempt from cap reduction. In addition, we proposed that if a low utilization hospital has a cap for Medicare payment purposes and filed Worksheet E–3 Part IV in at least one of its three most recent cost reports ending before March 23, 2010, the Medicare contractor would determine, based on the data of the available cost reports with Worksheet E–3 Part IV, whether a cap reduction is necessary under section 1886(h)(8)(A)(i) of the Act.

For those low utilization hospitals that have an FTE cap for Medicare payment purposes and have filed Worksheet E–3 Part IV in any of the three most recent cost reporting periods ending before March 23, 2010, we proposed that in determining whether, and by how much, that low utilization hospital's cap may be reduced, we would use the same methodology that we proposed to use for other Medicare-participating teaching hospitals. In addition, for purposes of section 1886(h)(8)(B) of the Act, we proposed that a low utilization hospital would be eligible to apply for an increase in its FTE resident cap under section 1886(h)(8)(B) of the Act, subject to the same demonstrated likelihood and evaluation criteria proposed for all other hospitals. However, as explained further below in this preamble, section 1886(h)(8)(B)(ii) of the Act, as added by section 5503(a)(4) of the Affordable Care Act, specifies certain requirements and thresholds that a hospital that receives additional slots must meet in order to retain those slots. One requirement is that the hospital must ensure that, for a 5-year period, its number of FTE primary care residents is not less than the average number of FTE primary care residents during the three most recent cost reporting periods ending prior to March 23, 2010. Accordingly, in the August 3, 2010 proposed rule (75 FR 46396), we proposed that an applying children's hospital must meet the same documentation requirements to establish this primary care average as other applying hospitals, which would mean that the children's hospital must have submitted a Worksheet E–3, Part IV with its Medicare cost report for those three most recent cost reporting periods ending prior to March 23, 2010. Furthermore, we proposed that, in order to receive an increase in its FTE resident cap under section 1886(h)(8)(B) of the Act, effective July 1, 2011, in addition to complying with the proposed application requirements as described in this preamble, the hospital would be required to file Worksheet E–3, Part IV, with its Medicare cost report for its cost reporting period that includes July 1, 2011, through and including its cost reporting period that includes June 30, 2016 (that is, the 5-year period). We proposed that the low utilization hospital must meet this requirement because section 1886(h)(8)(B) of the Act is intended to allow a hospital to increase its FTE counts for purposes of Medicare GME payments. We do not believe it would be appropriate to grant an increase in a hospital's FTE resident cap under section 1886(h)(8)(B) of the Act if the hospital does not use the slots for Medicare purposes (but only, for example, for purposes of the CHGME Payment Program) as would be evidenced by not filing a Worksheet E–3, Part IV. Moreover, as explained further below, we are required under sections 1886(h)(8)(B)(ii) and 1886(h)(8)(B)(iii) of the Act to ensure certain levels of primary care or general surgery training, and the information in Worksheet E–3, Part IV, would be necessary for that purpose.

Comment: Commenters supported the proposed policy that if a low utilization hospital does not have a cap for Medicare payment purposes or did not file Worksheet E–3, Part IV, in any of its three most recent cost reporting periods ending before March 23, 2010, it would be exempt from a cap reduction. One commenter encouraged CMS to consider the differences in the patients that children's hospitals serve as well as the unique relationship children's hospitals have with both the Medicare GME and CHGME programs as CMS makes decisions about redistribution of slots. Specifically, the commenter recommended that low or no-filer children's hospitals that meet all the other criteria should be eligible to apply for additional slots even if they have not submitted Worksheet E–3, Part IV over the past 3 years, as this will allow children's hospitals the opportunity to expand primary care and general surgery programs.

Response: We thank the commenters for their support of the proposed policy. In this final rule, we are finalizing a policy regarding low utilization hospitals such that if a low utilization hospital does not have a cap for Medicare payment purposes or did not file Worksheet E–3, Part IV for any of its three most recent cost reporting periods ending before March 23, 2010, for which a cost report has been settled or submitted to the Medicare contractor by March 23, 2010, that low utilization hospital would be exempt from a cap reduction. We are finalizing the policy that if a low utilization hospital has a cap for Medicare payment purposes and filed Worksheet E–3, Part IV in at least one of its three most recent cost reports ending before March 23, 2010, for which a cost report has been settled or has been submitted to the Medicare contractor by March 23, 2010, the Medicare contractor would determine, based on the data of the available cost reports with Worksheet E–3, Part IV, whether a cap reduction is necessary under section 1886(h)(8)(A)(i) of the Act. For purposes of section 1886(h)(8)(B) of the Act, we proposed that a low utilization hospital would be eligible to apply for an increase in its FTE resident cap under section

1886(h)(8)(B) of the Act, subject to the same demonstrated likelihood and evaluation criteria proposed for all other hospitals. As explained further in this preamble, section 1886(h)(8)(B)(ii) of the Act, as added by section 5503(a)(4) of the Affordable Care Act, specifies certain requirements and thresholds that a hospital that receives additional slots must meet in order to retain those slots. One requirement is that the hospital must ensure for a 5-year period that its number of FTE primary care residents is not less than the average number of FTE primary care residents during the three most recent cost reporting periods ending prior to March 23, 2010.

In response to the commenter's recommendation that low or no filer children's hospitals that meet all the other criteria should be eligible to apply for additional slots even if they had not submitted Worksheet E–3, Part IV over the past 3 years, we are changing our proposed policy in this final rule to allow a low utilization hospital to be eligible to apply for an increase in its FTE resident cap if it submitted by March 23, 2010, at least one cost report (instead of three cost reports) that includes Worksheet E–3, Part IV for cost reporting periods ending prior to March 23, 2010. Therefore, in determining whether, in its 5-year period of July 1, 2011 through June 30, 2016, the hospital's number of primary care residents is not less than a baseline amount, that baseline amount must include at least one cost report that includes Worksheet E–3, Part IV for a cost reporting period ending prior to March 23, 2010, that was submitted by March 23, 2010. If the low utilization hospital submits more than one cost report, the baseline amount will be based on an average of those cost reports (up to 3 years). In addition, we proposed a general requirement that all applicants must submit copies of their most recent as filed Worksheet E–3, Part IV for direct GME, Worksheet E, Part A for IME (which would not apply for children's hospitals), and if the hospital received slots under section 422 of the MMA, Worksheet E–3, Part VI as well (75 FR 46399 and 46420). In this final rule, as explained further below, under the Demonstrated Likelihood Criteria, applicants are also required to submit copies of these same worksheets from the cost report that was most recently submitted to the Medicare contractor by March 23, 2010. Secondly, we proposed that, in order to receive an increase in its FTE resident cap under section 1886(h)(8)(B) of the Act, effective July 1, 2011, in addition to complying with the proposed application requirements as described in this preamble, the hospital must file Worksheet E–3, Part IV, with its Medicare cost report for cost reporting periods that include July 1, 2011, through and including its cost reporting period that includes June 30, 2016 (that is, the 5-year period). In this final rule, we are finalizing these requirements for low utilization hospitals, without modification, and we are clarifying that a cost report or reports that would be used to determine whether a low utilization hospital would receive a cap reduction, would be a cost report that has been settled or submitted (subject to audit) to the Medicare contractor by March 23, 2010.

10. Treatment of Hospitals with Caps That Have Been Reduced or Increased Under Section 422 of Public Law 108–173

For purposes of implementation of section 5503(a) of the Affordable Care Act, section 1886(h)(8)(H)(iii) of the Act states that the term "otherwise applicable resident limit," means, "with respect to a hospital, the limit otherwise applicable under subparagraphs (F)(i) and (H) of paragraph (4) on the resident level for the hospital determined without regard to this paragraph but taking into account paragraph (7)(A)." As noted earlier in this preamble, section 1886(h)(7)(A) of the Act, as added by section 422 of Public Law 108–173, provided for reductions to hospitals' caps if the hospitals were training a number of residents below their FTE resident caps during the relevant reference period, and for a "redistribution" that increased the FTE resident caps for certain hospitals. Although sections 1886(h)(4)(F)(i) and 1886(h)(4)(H) of the Act refer to paragraph (7), which includes both cap reductions and increases made pursuant to section 422 of Public Law 108–173, we believe that specific mention of only paragraph (7)(A), which refers to cap reductions made under section 422, gives the Secretary the authority to only take into account the reductions made to hospitals' caps under section 1886(h)(7)(A) of the Act, for purposes of implementing section 1886(h)(8)(A)(i) of the Act. That is, we believe specific mention of paragraph (7)(A) is meant to provide that in determining a hospital's otherwise applicable resident limit, the Secretary should take into account any reductions to its reference resident level made under section 1886(h)(7)(A) of the Act to determine whether a cap reduction under section 1886(h)(8)(A)(i) of the Act is necessary. Furthermore, section 1886(h)(8)(H)(i) of the Act requires that, for purposes of determining the reference resident level, the Secretary is required to consider the hospital's three most recent cost reporting periods ending prior to March 23, 2010, that have been settled (or, if not, submitted (subject to audit)), as determined by the Secretary. In addition, we note that increases made under section 1886(h)(7)(B) of the Act were effective for portions of cost reporting periods beginning on or after July 1, 2005, and that some hospitals may still be filling their residency training programs with FTE resident slots gained under section 1886(h)(7)(B) of the Act, during what may be their reference cost reporting period for purposes of section 1886(h)(8)(A)(i) of the Act. Therefore, we believe that it would be inappropriate to include increases made under section 1886(h)(7)(B) of the Act in determining the hospital's reference resident level for purposes of cap reductions under section 1886(h)(8)(A)(i) of the Act. Hospitals that received increases to their caps under section 1886(h)(7)(B) of the Act may still be "building" their residency programs using the additional FTE resident slots they received under section 1886(h)(7)(B) of the Act. Therefore, it would be premature to remove any of those FTE resident slots. Accordingly, in the August 3, 2010 proposed rule (75 FR 46396), we proposed that, in determining whether a cap reduction is necessary under section 1886(h)(8)(A)(i) of the Act, we would compare the hospital's FTE resident count for its reference period to its FTE resident cap, as adjusted under section 1886(h)(7)(A) of the Act. We proposed that we would not consider any increases to its resident cap a hospital may have received under section 1886(h)(7) of the Act.

Comment: Commenters supported the proposed policy to compare a hospital's reference resident level to its cap as reduced under section 422 for purposes of determining whether the hospital should receive a cap reduction. One commenter requested that CMS confirm that its reference in the proposed §§ 412.105(f)(iv)(B)(2) and (C)(2) to paragraph "(f)(1)(E)(iv)(B)(1)" is a typographical error and the reference should be to paragraph "(f)(1)(iv)(B)(1)."

Response: The commenter is correct that we made a typographical error and the cross-reference in § 412.105(f)(iv)(B)(2) should be changed from paragraph "(f)(1)(E)(iv)(B)(1)" to paragraph "(f)(1)(iv)(B)(1)." We are not making any reference to paragraph (f)(1)(iv)(B)(1) in § 412.105(f)(1)(iv)(C)(2) because it is possible that a hospital may not have received a cap reduction either under section 1886(h)(7)(A) or section 1886(h)(8)(A) of the Act. We are

making these corrections to the regulations in this final rule. We appreciate the commenters' support of our proposed policy regarding treatment of hospitals' caps as reduced under section 422. We are finalizing our treatment of hospitals' caps as reduced under section 422 as proposed.

11. Criteria for Determining Hospitals That Will Receive Increases in Their FTE Resident Caps

Generally, under section 1886(h)(8)(A) of the Act, as added by section 5503(a)(4) of the Affordable Care Act, the Secretary is to reduce the FTE resident caps for hospitals that were training a number of residents below their otherwise applicable resident limit in the reference period by 65 percent of the "excess" resident slots. Under section 1886(h)(8)(B) of the Act, the Secretary is to "redistribute" the estimated number of FTE reductions under section 1886(h)(8)(A) of the Act to increase the FTE resident caps for use by other hospitals. Under section 1886(h)(8)(B)(i) of the Act, the Secretary is authorized to increase the otherwise applicable FTE resident cap for each qualifying hospital that submits a timely application by a number that the Secretary may approve, for portions of cost reporting periods occurring on or after July 1, 2011. In implementing section 1886(h)(8)(B) of the Act, we note the difficulty in deciding how to prioritize hospitals' requests when redistributing unused resident slots. Therefore, in addition to some considerations and priorities in redistribution that are specified in section 5503 of the Affordable Care Act, in the August 3, 2010 proposed rule (75 FR 46396), we proposed certain additional criteria that we believe would allow for an objective decision-making process.

Section 1886(h)(8)(B) of the Act, as added by section 5503 of the Affordable Care Act, establishes certain parameters in the statutory language for hospitals to meet to qualify to receive increases in their FTE resident caps. First, section 1886(h)(8)(B)(i) of the Act states that the aggregate number of increases in the otherwise applicable resident limits (caps) shall be equal to the aggregate reduction in the resident limits determined under section 1886(h)(8)(A) of the Act as estimated by the Secretary (as discussed in section XXI.D. of this preamble). Section 1886(h)(8)(F) of the Act states that in no case will any hospital receive an FTE cap increase of more than 75 FTE positions as a result of the redistribution. In addition, section 1886(h)(8)(C) of the Act specifies that, in determining which hospitals will receive the increases to their FTE resident caps, the Secretary is required to take into account the demonstrated likelihood that the hospital would be able to fill the position(s) within the first three cost reporting periods beginning on or after July 1, 2011, and whether the hospital has an accredited rural training track program.

In setting up an application process for hospitals to apply for FTE resident cap increases from the redistribution pool (discussed in section XXI.D.12. of this preamble), in the August 3, 2010 proposed rule (75 FR 46397), we proposed to consider the "demonstrated likelihood" criterion under section 1886(h)(8)(C)(i) as an eligibility criterion that a hospital must meet in order for CMS to further consider the hospital's application for an increase in its FTE resident cap. We proposed that a hospital would meet the "demonstrated likelihood" criterion by demonstrating that it is either already training a number of FTE residents at or in excess of its current FTE caps (IME and direct GME FTE caps, respectively, *including any applicable section 422 cap add-on*), or that it does not have sufficient room under its current FTE caps to accommodate a planned new program or expansion of an existing program. We indicated that we believe it is appropriate to consider a hospital's "demonstrated likelihood" as a requirement because we believe such hospitals will be best positioned to make immediate and efficient use of any FTE cap increase, and thereby, to use any resulting increase in Medicare GME payments to train the physician workforce that will provide care to Medicare beneficiaries. Thus, we proposed that, in order to be eligible for consideration for an increase under section 1886(h)(8)(B) of the Act, a hospital must first demonstrate the likelihood that it will able to fill the slots within the first three cost reporting periods beginning on or after July 1, 2011, by meeting *at least one* of the following three criteria and by providing documentation that it meets the criterion in its application for an increase to its FTE resident cap:

• *Demonstrated Likelihood Criterion 1.* The hospital does not have sufficient room under its current FTE cap for a new residency program that it intends to establish on or after July 1, 2011 (that is, a newly approved program that begins training residents at any point within the hospital's first three cost reporting periods beginning on or after July 1, 2011). Under this criterion, the hospital would select one of the following:

(1) Hospital will establish a newly approved residency program. (Under this selection, the hospital would be required to check at least one of the following, if applicable):

☐ Application for approval of the new residency program has been submitted to the ACGME, AOA, or the ABMS by December 1, 2010. (The hospital would be required to attach a copy.)

☐ The hospital has submitted an institutional review document or program information form concerning the new program in an application for approval of the new program by December 1, 2010. (The hospital would be required to attach a copy.)

☐ The hospital has received written correspondence from the ACGME, AOA, or ABMS acknowledging receipt of the application for the new program, or other types of communication from the accrediting bodies concerning the new program approval process (such as notification of site visit). (The hospital would be required to attach a copy.)

(2) Hospital will likely fill the slots requested. (The hospital would be required to select at least one of the following, if applicable.)

☐ The hospital does not have sufficient room under its FTE cap, and the hospital's existing residency programs had a combined resident fill rate of at least 85 percent in each of program years 2007 through 2009. (The hospital would be required to attach documentation.)

☐ The hospital does not have sufficient room under its FTE cap, and the specialty program for which the hospital is applying has a resident fill rate either nationally, within the State, or within the CBSA in which the hospital is located, of at least 85 percent. (The hospital would be required to attach documentation.)

• *Demonstrated Likelihood Criterion 2.* The hospital does not have sufficient room under its FTE cap, and the hospital intends to use the additional FTEs to expand an existing residency training program within the hospital's first three cost reporting periods beginning on or after July 1, 2011.

(1) Hospital intends to expand an existing program. Under this selection, the hospital would be required to check at least one of the following, if applicable:

☐ The appropriate accrediting body (the ACGME, AOA, or ABMS) has approved the hospital's expansion of the number of FTE residents in the program. (The hospital would be required to attach documentation.)

☐ The American Osteopathic Association Residency Match Program

has accepted or will be accepting the hospital's participation in the match for the existing program that will include additional resident slots in that residency training program. (The hospital would be required to attach documentation.)

□ The hospital has submitted an institutional review document or program information form for the expansion of the existing residency training program by December 1, 2010. (The hospital would be required to attach documentation.)

(2) Hospital will likely fill the slots of the expanded existing residency program. Under this selection, the hospital would be required to check at least one of the following, if applicable:

□ The hospital does not have sufficient room under its FTE cap, and the hospital has other previously established residency programs, with a resident fill rate of at least 85 percent in each of program years 2007 through 2009.) (The hospital would be required to attach documentation.)

□ The hospital does not have sufficient room under its FTE cap, and the hospital is expanding an existing program in a particular specialty with a resident fill rate either nationally, within the State, or within the CBSA in which the hospital is located, of at least 85 percent. (The hospital would be required to attach documentation.)

• *Demonstrated Likelihood Criterion 3.* The hospital is applying for an increase in its FTE resident cap because the hospital is already training residents in an existing residency training program(s) in excess of its direct GME FTE cap or IME FTE cap, or both. The hospital would be required to attach copies of each of the following:

—Copies of the Medicare cost reports that have been most recently submitted to the Medicare contractor on or by July 1, 2010, documenting on Worksheet E, Part A, Worksheet E–3, Part IV, and Worksheet E–3, Part VI, the resident counts and FTE resident caps for both direct GME and IME for the relevant cost reporting periods.

—Copies of the 2010 residency match information concerning the number of residents at the hospital in its existing programs (that is, all programs, not only the ones for which the hospital may be requesting more slots).

—Copies of the most recent accreditation letters on all of the hospital's training programs in which the hospital trains and counts FTE residents for direct GME and IME.

In the August 3, 2010 proposed rule, we proposed that *each* hospital applying for an increase under section 1886(h)(8)(B)(i) of the Act would be required to meet at least one of the above criteria in order to demonstrate the likelihood that it will be able to fill the additional slots associated with any increase in the hospital's FTE resident cap within the first three cost reporting periods beginning on or after July 1, 2011. In other words, each hospital that wishes to apply for an increase in its FTE resident cap, as a preliminary matter, would be required to meet the "demonstrated likelihood" criterion in order for CMS to further consider the hospital's application for an increase in its FTE resident cap.

Although a hospital might be applying for additional slots for more than one specialty program, each application by a hospital must be program-specific. That is, the hospital would be required to complete a separate CMS evaluation form for each program and to demonstrate the likelihood of filling the slots in each program. However, in accordance with our general policy with respect to FTE resident caps, increases in hospital's FTE resident caps under section 1886(h)(8)(B)(i) of the Act for direct GME and IME, once granted to a hospital, would no longer be program-specific. Rather, the hospital's adjusted FTE resident caps would be applied to the hospital's FTE resident counts, including any residents the hospital trains. However, we noted, that for FTE residents counted as a result of an increase in the FTE resident caps under section 422 of Public Law 108–173, payment is calculated separately for direct GME purposes using the national average PRA and, for IME purposes using a multiplier of 0.66. If a hospital receives an increase to its FTE resident cap(s) under section 5503 of the Affordable Care Act, and also received a cap increase under section 422, we proposed that the hospital would first assess whether it is training a number of residents in excess of its combined 1996 FTE and section 5503 caps and, only if its number of FTE residents still exceeds this combined cap would the separate 422 payment rates be applied to the excess FTEs for IME and direct GME respectively. Nevertheless, while the slots a hospital would receive under section 1886(h)(8)(B)(i) of the Act for direct GME and IME, once granted to a hospital, would no longer be program-specific, the hospital that receives the slots must comply with the requirements specified at section 1886(h)(8)(B)(ii) of the Act for a 5-year period; that is, maintaining the primary care average and the 75-percent threshold. In addition, we note that because of the 75-percent threshold, a hospital cannot apply for slots under section 5503 only for a non-primary care program (other than general surgery). However, a hospital could apply for slots, and demonstrate that it needs 75 percent of those slots to start or expand a particular primary care (or general surgery) program, and that it needs 25 percent of those slots for use in a particular nonprimary care program. However, the hospital's request for each program will be evaluated separately. The hospital's request for slots to start or expand a particular primary care (or general surgery) program could receive some points under the Evaluation Criteria, and may be fulfilled, while the hospital's request for slots for use in a non-primary care program would not receive any points and would be ranked last after all other applications for primary care or general surgery programs. For example, a hospital could apply for a total of 4 slots; 3, or 75 percent, for use in starting a geriatrics fellowship program (5 points under Evaluation Criterion Two), and 1, or 25 percent, to be used to add a Vascular & Interventional Radiology fellow (0 points). The hospital would likely be awarded three slots for geriatrics, but the chances that it would also be rewarded one slot for the Vascular & Interventional Radiology fellow are very slim, as the request for this program would be ranked last after all requests for primary care or general surgery programs.

For purposes of the application for the increase to the FTE caps under section 1886(h)(8)(B)(i) of the Act, we proposed to define "national fill rate" for each academic year, as we did when implementing section 422 of Public Law 108–173. That is, we defined "national fill rate" as the number of residents training in a program nationally as compared to the number of accredited slots in that program as of June 30 of that year. This information is available from the ACGME and the AOA. Furthermore, we proposed to require that, for the purposes of an application for an increase to a hospital's FTE resident cap under section 1886(h)(8)(B) of the Act, a hospital must use the "fill rate" for the most recent academic year for which data are available.

We understand that hospitals may train fewer residents than the number of available accredited slots in their approved programs due to reasons other than an inability to fill those slots. Furthermore, because we understand that a national fill rate is not necessarily the only indicator of the ability of hospitals to fill residency positions in its CBSA or State, and there may be

characteristics particular to a region, such as population density, variety of practice settings, or access to technology or procedures that may allow a specified area to have a fill rate in a specific program that exceeds the program's national fill rate, we proposed several options for a hospital to satisfy the "fill rate'" criterion. In part, as when implementing section 422 of Public Law 108–173, we specified that the fill rate "threshold" is 85 percent. We believe that this rate will reasonably identify those programs that are likely to fill FTE resident positions in newly approved or expanded programs (while providing some latitude to account for other factors that affect the national fill rate), and to fully utilize an increase in FTE resident cap slots that may be available under section 1886(h)(8)(B) of the Act as added by section 5503 of the Affordable Care Act. We proposed that a hospital may demonstrate the likelihood of filling FTE resident positions associated with a possible increase in its FTE resident cap under section 5503 by documenting that any of the following applies to the new program or to an expansion of an existing program:

- The specialty program has a resident fill rate nationally, across all hospitals, of at least 85 percent.
- The specialty program has a resident fill rate within the State in which the hospital is located of at least 85 percent.
- If the hospital is located within an urban CBSA, the specialty program has a resident fill rate within the CBSA of at least 85 percent.

For the purposes of demonstrating the likelihood of filling FTE resident positions under section 1886(h)(8)(C)(i) of the Act, as added by section 5503, we proposed that "national fill rate" means, for the most recent academic year for which data is available, the number of residents training in a program nationally (combined allopathic and osteopathic residents) compared to the number of accredited slots in that program nationally as of June 30 of that year. The proposed Demonstrated Likelihood Criterion 1 and Demonstrated Likelihood Criterion 2 also allow a hospital to demonstrate the likelihood of filling the requested slots by demonstrating that the hospital's existing residency programs had a "resident fill rate" of at least 85 percent in each program year from 2007 through 2009. For the purpose of fulfilling these demonstrated likelihood criteria, we proposed to define "resident fill rate" to mean, for the most recent academic year for which data is available, the number of residents training in each program in total at a particular hospital as compared to the number of accredited slots in each program in total at that hospital as of June 30 of that year.

We also understand that, for certain programs, because of the length of the accreditation process and a relatively long match period, a hospital may be unable to accept its first class of PGY–1 residents until July 1, 2012. In the August 3, 2010 proposed rule (75 FR 46398 through 46399), we proposed that the hospital may still apply to receive a full complement of residents for the 3 years beginning July 1, 2012, assuming the applicant hospital can demonstrate the likelihood that it will fill the slots relating to a possible increase in its FTE resident caps under section 1886(h)(8)(B)(i). However, if the applicant hospital does not demonstrate the likelihood that it will fill *any* FTE slots for programs described by the hospital on the CMS evaluation form(s) at *any* point within the hospital's first three cost reporting periods beginning on or after July 1, 2011, the hospital would not be eligible for further consideration by CMS of an increase to the hospital's FTE caps under section 1886(h)(8)(B)(i). Accordingly, our proposed Demonstrated Likelihood Criterion 1 would reflect that the hospital does not have sufficient room under its FTE cap to train residents in a newly approved residency program that it demonstrates it will establish within the hospital's first three cost reporting periods beginning on or after July 1, 2011 (that is, a newly approved program that begins training residents *at any point within the hospital's first three cost reporting periods beginning on or after July 1, 2011*)" (emphasis added).

Under Demonstrated Likelihood Criterion 3, we proposed to allow a hospital that is already training a number of FTE residents in an existing residency training program(s) in excess of its direct GME FTE cap or IME FTE cap, or both, to meet the demonstrated likelihood requirement. In order to document that it meets this criterion, a hospital would be required to submit copies of the 2010 "residency match" information concerning the number of residents the hospital has in an existing program. We believed the most recent match information could indicate that the hospital is expected to take in more residents than the number of cap slots it has available. For purposes of the application of this demonstrated likelihood criterion, we proposed to define "residency match" as a national process administered by the National Residency Matching Program (NRMP), including the NRMP's Specialties Matching Service, the San Francisco Matching Program, the American Osteopathic Association Residency Match Program, or the Urology Matching Program, by which applicants to approved medical residency programs are paired with programs on the basis of preferences expressed by both the applicants and the program directors. (We note that in this final rule, we removed Demonstrated Likelihood Criterion 3).

We also noted in the proposed rule that under Demonstrated Likelihood Criteria 2 and 3, the hospital would be applying for an increase in its FTE cap because it is expanding an *existing* residency program, or it is already training residents in an *existing* residency training program(s) in excess of its FTE caps, respectively. By existing program, we proposed that, as of July 1, 2010, the hospital is either already training residents in this program or programs, or the program exists at another hospital prior to July 1, 2011, but the residents begin to rotate at the applying hospital on or after July 1, 2011. We set forth several proposed methods for hospitals to be able to demonstrate to CMS under the proposed Demonstrated Likelihood Criterion 1 that they can fill the slots by showing CMS that they are establishing a *new* residency program on or after July 1, 2011. We believe hospitals that establish new residency programs *before* July 1, 2011, could possibly also meet Demonstrated Likelihood Criterion 2, relating to a hospital that is expanding an existing residency program on or after July 1, 2011. From the perspective of applying for the cap increase under section 1886(h)(8)(B)(i) of the Act, the new program that starts training residents in 2010 is an "existing residency program" because it began before July 1, 2011, and it is "expanding" if that program is increasing the number of FTE residents in the first three cost reporting periods beginning on or after July 1, 2011.

We noted that the listing of programs participating in the AOA Match Program will be available on the National Matching Services Web site as of November 1, 2010. Therefore, we proposed that programs utilizing the AOA Match Program may, in addition to the two options listed above, demonstrate the intent to expand an existing program by documenting that the AOA has accepted the hospital's participation in the match program by the December 1, 2010 application deadline. Therefore, we proposed that this method of demonstrating the hospital's intent to expand an existing program would be applicable for

programs participating in the AOA Match Program.

Comment: One commenter requested that CMS clarify that "Demonstrated Likelihood Criterion 3" applies both to hospitals at their cap as well as to those training residents "in excess of" their cap. The commenter noted that on page 46397 of the proposed rule, CMS states that a hospital may meet this demonstrated likelihood criterion "by demonstrating that it is [ ] already training a number of FTE residents at or in excess of its current FTE caps;" however, the longer description of "Demonstrated Likelihood Criterion 3" on page 46398 states that a hospital "is applying for an increase in its FTE resident cap because the hospital is already training residents in an existing residency training program(s) in excess of its direct GME FTE cap or IME FTE cap, or both."

Another commenter thought that hospitals that are currently exceeding their caps should qualify to receive additional cap slots even without adding a new program or expanding an existing program. The commenter stated that CMS' explanation of the application of the "75 percent" test makes it appear that it is impossible to obtain increases to the caps without either starting or expanding a program. The commenter believed that there are inconsistencies in the preamble that permit a hospital that is over its cap to meet the "Demonstrated Likelihood" criteria without adding or expanding a program, and the point criteria which do not make adding or expanding a program essential, and the 75 percent test which cannot be satisfied without adding or expanding a program.

Response: After reading these comments and reviewing the proposed Demonstrated Likelihood Criteria 1, 2, and 3, we agree that clarification and revision of the criteria are necessary. Specifically, we are revising Demonstrated Likelihood Criteria 1 to incorporate the point that a hospital is applying for additional cap slots because it is *either* already exceeding its FTE cap, *or* it does not have sufficient room under its FTE cap to start a new program. For Demonstrated Likelihood Criterion 2, we are incorporating the point that a hospital is applying for additional cap slots because it is *either* already exceeding its FTE cap, *or* it does not have sufficient room under its FTE cap to expand an existing program. Thus, Demonstrated Likelihood Criteria 1 and 2 may apply to a hospital that may or may not already be exceeding its FTE cap, but it definitely plans on starting a new or expanding an existing program. Because we are specifying in this final rule that Demonstrated Likelihood Criteria 1 and 2 may also apply for hospitals that are in excess of their caps (albeit not solely for cap relief), we are adding that hospitals applying under these criteria could also submit copies of their Medicare cost report worksheets, documenting that they are in excess of their caps. However, in this final rule, instead of stating that the hospital must submit a copy of the Medicare cost report that has been most recently submitted to the Medicare contractor by July 1, 2010, as we stated in the proposed rule, we are stating that the hospital must submit a copy of the Medicare cost report that has been most recently submitted to the Medicare contractor on or before March 23, 2010, documenting on Worksheet E, Part A, Worksheet E–3, Part IV, and Worksheet E–3, Part VI, the resident counts and FTE resident caps for both direct GME and IME for the relevant cost reporting periods. We are *removing* the proposed Demonstrated Likelihood Criterion 3 from this final rule because it is duplicative. Further, it has confused the commenters and has led some to believe that hospitals that are already training residents in excess of their caps, and are seeking the additional slots for cap relief, rather than for the purpose of starting a new or expanding an existing program, may apply for slots under section 5503. Since the intent of section 5503 is to *increase* the number of primary care or general surgery physicians by providing Medicare funding for new primary care or general surgery positions (either through establishment of new programs or expansions of existing programs), as the 75 percent requirement indicates, it would be inconsistent with this intent to provide funding for already existing positions. Thus, if hospitals are willing to increase the number of primary care or general surgery residents they are training above current levels, there may be some funding available under section 5503 for them to do so. Accordingly, we are clarifying that a hospital may not request additional slots under section 5503 solely for the purpose of cap relief. We explain in great detail below in response to comments regarding the primary care average requirement and the 75 percent threshold requirement how a hospital that is exceeding its FTE caps and that applies for additional slots would have to increase the number of residents it is training in order to meet the 75 percent threshold requirement. We refer readers to those comments and responses below.

With regard to the commenter's belief that there are inconsistencies in the preamble that permit a hospital that is over its cap to meet the "Demonstrated Likelihood" criteria without adding or expanding a program, and the Evaluation Criteria which do not make adding or expanding a program essential, we have reviewed the Evaluation Criteria and we believe that proposed Evaluation Criteria Two, Three, and Four specifically state that the "hospital will use the additional slots to establish a new or expand an existing program." This implies that the hospital intends to create new positions, rather than only seeking cap relief for existing positions. Proposed Evaluation Criteria One, Five, and Six are specific to the hospital's situation, rather than its particular programs, and they can be used in addition to Evaluation Criteria Two, Three, and Four. Therefore, we do not agree that there are inconsistencies between the proposed (or final) Demonstrated Likelihood Criteria and Evaluation Criteria.

Comment: One commenter agreed with CMS' proposal that one way of demonstrating the likelihood of filling slots awarded under section 5503 is for a hospital to show that it is already training residents in excess of its cap, but thought that the documentation requirements for such a hospital is "excessive." The commenter found it to be "particularly perplexing" that "*three* pieces of documentation would be required for a criterion that is the most straightforward rationale for requesting additional cap slots." The three pieces are (1) copies of most recent Medicare cost reports, documenting the DGME and IME caps, (2) copies of the 2010 residency match information concerning the number of residents at the hospital in its existing programs (all programs—not just the programs for which the hospital is requesting additional slots), and (3) copies of the most recent accreditation letters on all of the hospital's training programs for which the hospital trains and counts residents for DGME and IME payments. The commenter did not see the need to submit 2010 residency match information, "because these data do not necessarily indicate the total number of residents training at an institution," and submission of accreditation information is also "unnecessary and burdensome, particularly for institutions with 75 or more residency and fellowship programs—which is not uncommon." The commenter urged CMS to adopt only the requirement that copies of the most recent Medicare cost reports be submitted for Demonstrated Likelihood Criterion 3, and at a minimum, this requirement should be the requirement

for hospitals that were over their caps in all of the past three cost reporting periods. Another commenter asked CMS to clarify which cost reporting periods will be used to determine whether a hospital is "currently" over its cap.

Response: As we explained in response to the previous comment, we are clarifying that a hospital may not request additional cap slots under section 5503 merely for cap relief. Furthermore, since we have consolidated Demonstrated Likelihood Criteria 1 and 2, we are removing Demonstrated Likelihood Criterion 3 and its attending documentation requirements that the commenter believed were overly burdensome from this final rule.

Comment: One commenter believed that CMS should include an exception for family medicine in the fill rate requirement and expanded need requirement for the Demonstrated Likelihood Criteria 1 and 2. The commenter argued that the accreditation process for family medicine is unique in that it allows for "leeway" in the number of residents allowed to be trained. The commenter stated that a program may increase its complement of residents by a "limited, yet unstated" number as long as it is justified in its next accreditation review or approval cycle and as such, a specific number would not be stated. For the same reasons, the commenter further asserted that the information on a family medicine accreditation letter for Demonstrated Likelihood Criterion 3 would be inappropriate.

This commenter also noted that CMS seems to switch from using fill rate data to match data in Demonstrated Likelihood Criterion 3. The commenter recommended that CMS use fill rate data because "match data is incomplete and inaccurate as an aid to determining a resident census."

Response: We note first that, as stated in response to previous comments, we have eliminated Demonstrated Likelihood Criterion 3 from this final rule. Second, we are unsure of the precise question that the commenter is asking. It appears that the commenter is stating that directors of family medicine programs need not request approval from the ACGME every time they want to expand an existing program by a "limited" number of unspecified positions, so long as the increase in resident positions is declared and explained at the next accreditation review. If we are understanding the commenter correctly, we think the commenter is asking that hospitals that are applying for additional slots for the purpose of using those slots for a family medicine program should not be required to submit to CMS applications for approval (or actual approvals) of new or expansions of existing family medicine programs to the ACGME, or copies of recent accreditation letters. However, we do not think we should make a special exception to the Demonstrated Likelihood Criteria for family medicine programs since we have heard of situations where hospitals have increased their number of residents training in various programs (not just family medicine) above the number of accredited slots without immediate approval of the increase and without repercussions from the ACGME. Furthermore, even if a hospital increases the number of residents in a particular residency program, and that increase is not significant enough to definitely require pre-approval from the ACGME, we believe that requiring hospitals to submit to CMS as part of the Demonstrated Likelihood requirements applications for approval to expand programs is appropriate in the context of applications for additional slots under section 5503. The statute requires hospitals to "demonstrate the likelihood" of filling the positions, and documents submitted to the ACGME either requesting approval of, or received from the ACGME showing approval of expansions of existing programs demonstrates a commitment on the part of the hospital to actually expand those programs. Furthermore, although the commenter asked for an exception for family medicine programs from Demonstrated Likelihood Criterion 1, which is applicable to hospitals seeking slots with which to start a new program (in addition to asking for an exception to Demonstrated Likelihood Criterion 2), we are skeptical that the ACGME would actually allow a hospital to start a brand new family medicine program, without any submission of documentation at all. Although we understand that there are instances where residents may begin training in a new program on July 1 of an academic year, and the ACGME may retroactively accredit that program a few months later, the hospital would certainly have submitted to the ACGME an institutional review document or program information form concerning the new program, and by such time as the hospital begins to train the residents, we would hope that the hospital would have received written correspondence from the ACGME acknowledging receipt of the application for the new program, and notification of a site visit, as described under the requirements for Demonstrated Likelihood Criterion 1. Therefore, we are not revising the documentation requirements under Demonstrated Likelihood Criteria 1 and 2 specifically for family medicine.

However, we do believe some revision can be made to the documentation requirements under Demonstrated Likelihood Criterion 1 to ease the burden on hospitals applying for slots under section 5503 for family medicine and other programs. Under the proposed Demonstrated Likelihood Criterion 1, a hospital could demonstrate that it would likely fill the slots in a new program by showing that it (1) already received approval from the ACGME, AOA, or ABMS, (2) has already submitted an institutional review document or program information form requesting approval for a new program, or (3) has received correspondence from the accrediting agencies acknowledging receipt of the application for the new program, or other types of communication regarding the approval process. We understand that completing the program information form can be a time-consuming and lengthy process, which may pose some challenges for hospitals to complete in a timely fashion and meet CMS' application deadline for receipt of slots under section 5503. Therefore, we are adding a fourth option under Demonstrated Likelihood Criterion 1 which we believe may make it easier for some hospitals to comply with this criterion. Specifically, we are adding that the hospital may submit documentation demonstrating that it has made a commitment to start a new program. One example of such a commitment would be for the hospital to provide the minutes from the meeting at which the hospital's GME committee gave approval for the hospital to proceed with the process of applying to the accrediting agency for approval to start a new program. We are not adding a similar option under Demonstrated Likelihood Criterion 2 because we understand that the process for requesting approval to expand an existing program is not as time-consuming and labor-intensive as the process for requesting approval for a brand new program.

We are revising and consolidating the Demonstrated Likelihood Criteria as follows:

- *Demonstrated Likelihood Criterion 1.* The hospital is training residents in excess of its FTE resident cap(s), or does not have sufficient room under its current FTE cap(s), and the hospital intends to use the additional FTEs for a new residency program that it intends to start on or after July 1, 2011 (that is, a newly approved program that begins training residents at any point within

the hospital's first three cost reporting periods beginning on or after July 1, 2011). Under this criterion, the hospital must select one of the following:

(1) Hospital will establish a newly approved residency program. (Under this selection, the hospital must check at least one of the following, if applicable):

☐ Application for approval of the new residency program has been submitted to the ACGME, AOA, or the ABMS by January 21, 2011. (The hospital must attach a copy.)

☐ The hospital has submitted an institutional review document or program information form concerning the new program in an application for approval of the new program by January 21, 2011. (The hospital must attach a copy.)

☐ The hospital has received written correspondence from the ACGME, AOA, or ABMS acknowledging receipt of the application for the new program, or other types of communication from the accrediting bodies concerning the new program approval process (such as notification of site visit). (The hospital must attach a copy.)

☐ The hospital may submit documentation demonstrating that it has made a commitment to start a new program.

(2) Hospital will likely fill the slots requested. (The hospital must select at least one of the following, if applicable.)

☐ The hospital does not have sufficient room under its FTE cap, or is exceeding its FTE cap, and the hospital's existing residency programs had a combined resident fill rate of at least 85 percent in each of program years 2007 through 2009. (The hospital must attach documentation.)

☐ The hospital does not have sufficient room under its FTE cap, or is exceeding its FTE cap, and the specialty program for which the hospital is applying has a resident fill rate either nationally, within the State, or within the CBSA in which the hospital is located, of at least 85 percent. (The hospital must attach documentation.)

☐ The hospital is training residents in excess of its direct GME FTE cap, or IME FTE cap, or both. The hospital must submit a copy of the Medicare cost report that has been most recently submitted to the Medicare contractor on or before January 21, 2011, documenting on Worksheet E, Part A, Worksheet E–3, Part IV, and Worksheet E–3, Part VI, the resident counts and FTE resident caps for both direct GME and IME for the relevant cost reporting periods.

• *Demonstrated Likelihood Criterion 2.* The hospital is training residents in excess of its FTE cap(s), or does not have sufficient room under its FTE cap(s), and the hospital intends to use the additional FTEs to expand an existing residency training program within the hospital's first three cost reporting periods beginning on or after July 1, 2011.

(1) The hospital intends to expand an existing program. Under this selection, the hospital must check at least one of the following, if applicable:

☐ The appropriate accrediting body (the ACGME, AOA, or ABMS) has approved the hospital's expansion of the number of FTE residents in the program. (The hospital must attach documentation.)

☐ The American Osteopathic Association Residency Match Program has accepted or will be accepting the hospital's participation in the match for the existing program that will include additional resident slots in that residency training program. (The hospital must attach documentation.)

☐ The hospital has submitted an institutional review document or program information form for the expansion of the existing residency training program by January 21, 2011. (The hospital must attach documentation.)

(2) Hospital will likely fill the slots of the expanded existing residency program. Under this selection, the hospital must check at least one of the following, if applicable:

☐ The hospital does not have sufficient room under its FTE cap, or is exceeding its FTE cap, and the hospital has other previously established residency programs, with a resident fill rate of at least 85 percent in each of program years 2007 through 2009.) (The hospital must attach documentation.)

☐ The hospital does not have sufficient room under its FTE cap, or is exceeding its FTE cap, and the hospital is expanding an existing program in a particular specialty with a resident fill rate either nationally, within the State, or within the CBSA in which the hospital is located, of at least 85 percent. (The hospital must attach documentation.)

☐ The hospital is training residents in excess of its direct GME FTE cap, or IME FTE cap, or both. The hospital must submit a copy of the Medicare cost report that has been most recently submitted to the Medicare contractor by March 23, 2010, documenting on Worksheet E, Part A, Worksheet E–3, Part IV, and Worksheet E–3, Part VI, the resident counts and FTE resident caps for both direct GME and IME for the relevant cost reporting periods.

Comment: One commenter requested that CMS allow hospitals to demonstrate their likelihood of using redistributed slots for three reporting periods beginning July 1, 2012, instead of July 1, 2011, as CMS has proposed. The commenter posited that by using the reporting period beginning July 1, 2012, hospitals would be able to document with greater precision their effective use of the redistributed slots.

Response: We understand that three cost reporting periods after a date of July 1, 2012, would give the commenters more time to demonstrate their effective use of the redistributed slots. However, we do not have any flexibility in choosing this date because section 1886(h)(8)(C) of the Act clearly specifies that the Secretary is required to take into account the demonstrated likelihood that a hospital would be able to fill the position(s) *within the first 3 cost reporting periods beginning on or after July 1, 2011.*

After consideration of the public comments we received, we are revising Demonstrated Likelihood Criteria 1 to incorporate the point that a hospital is applying for additional cap slots because it is *either* already exceeding its FTE cap, *or* it does not have sufficient room under its FTE cap and plans to start a new program. We also are revising Demonstrated Likelihood Criterion 1 to add that the hospital may submit documentation demonstrating that it has made a commitment to start a new program. For Demonstrated Likelihood Criterion 2, we are incorporating the point that a hospital is applying for additional cap slots because it is *either* already exceeding its FTE cap, *or* it does not have sufficient room under its FTE cap and it plans to expand an existing program. Thus, Demonstrated Likelihood Criteria 1 and 2 may apply to a hospital that may or may not already be exceeding its FTE cap, but it definitely plans on starting a new or expanding an existing program. Because we are specifying in this final rule that Demonstrated Likelihood Criteria 1 and 2 may also apply for hospitals that are in excess of their caps, we are adding that hospitals applying under these criteria must also submit copies of their Medicare cost report worksheets, documenting that they are in excess of their caps. Therefore, we are *removing* the proposed Demonstrated Likelihood Criterion 3 from this final rule because it is duplicative. Further, we are clarifying that because the intent of section 5503 is to *increase* the number of primary care or general surgery physicians by providing Medicare funding for new primary care or general surgery positions (either through establishment of new programs or expansions of existing programs),

hospitals may not apply to receive slots under section 5503 for the purpose of cap relief.

12. Application Process for the Increases in Hospitals' FTE Resident Caps

In order for hospitals to be considered for increases to their FTE resident caps under section 1886(h)(8)(B)(i) of the Act, as added by section 5503(a)(4) of the Affordable Care Act, in the August 3, 2010 proposed rule (75 FR 46399), we proposed to require that each qualifying hospital submit a timely application by December 1, 2010. As part of the requirements that a hospital must fulfill in order to complete an application for an increase to its FTE resident caps, we proposed to require that the applicant hospital must include the total number of requested FTE resident slots (for all residency programs) for direct GME or IME, or both (not to exceed 75 FTEs for each, as specified under section 1886(h)(8)(F) of the Act). Thus, we would require that the hospital's total requests for increases in the IME and the direct GME caps (that is, the total number of requested FTE resident slots increases (for all residency programs at the hospitals)) would be required to be indicated on the same application for an increase under section 1886(h)(8)(B)(i) of the Act. We proposed that each hospital must submit the following information on its application for an increase in its FTE resident cap:

- The name and Medicare provider number of the hospital, and the name of the Medicare contractor to which the hospital submits its cost report.
- The total number of requested FTE resident slots (for all residency programs at the hospital) for direct GME or IME, or both (not to exceed 75 FTEs each).
- A completed copy of the CMS evaluation form (as described below) for each residency program for which the applicant hospital intends to use the requested increase in the number of FTE residents and source documentation to support the assertions made by the hospital on the evaluation form. (For example, if the hospital checks off on the evaluation form that the hospital is starting a new geriatrics program, the hospital would include documentation to support that assertion.)
- FTE resident counts for direct GME and IME and FTE resident caps for direct GME and IME reported by the hospital in the most recent as-filed cost report (as clarified in this final rule, submitted by March 23, 2010). (The hospital would be required to include copies of Worksheets E, Part A, E–3, Part IV, *and if a hospital received an increase to its FTE cap(s) under section 422 of Public Law 108–173,* a copy of Worksheet E–3, Part VI.)
- An attestation, signed and dated by an officer or administrator of the hospital who signs the hospital's Medicare cost report, of the following information in the hospital's application for an increase in its FTE resident cap:

"I hereby certify that I understand that misrepresentation or falsification of any information contained in this application may be punishable by criminal, civil, and administrative action, fine and/or imprisonment under federal law. Furthermore, I understand that if services identified in this application were provided or procured through payment directly or indirectly of a kickback or were otherwise illegal, criminal, civil, and administrative action, fines and/or imprisonment may result. I also certify that, to the best of my knowledge and belief, it is a true, correct, and complete application prepared from the books and records of the hospital in accordance with applicable instructions, except as noted. I further certify that I am familiar with the laws and regulations regarding Medicare payment to hospitals for the training of interns and residents."

We proposed that any hospital that wishes to apply for an increase in its FTE resident cap(s) under section 1886(h)(8)(B)(i) of the Act must submit a copy of its completed application (as described above) to the CMS Central Office and to the CMS Regional Office for the region in which the applicant hospital is located, and that the application must be received by CMS on or before December 1, 2010. (The mailing addresses for the CMS offices are indicated at the end of this section of the preamble.) We noted that some hospitals' FTE counts would be subject to audit for purposes of possible cap reductions under section 1886(h)(8)(A)(i) of the Act, and those audits may not be completed by December 1, 2010. Because the results of such an audit may be a factor in a hospital's decision whether to request an increase in its FTE resident cap under section 1886(h)(8)(B)(i) of the Act, we proposed to allow a later date for those hospitals to apply for increases in their FTE resident caps. Therefore, if a hospital's resident level is audited for purposes of section 1886(h)(8)(A) of the Act, whether or not the hospital's FTE resident caps are reduced under section 1886(h)(8)(A) of the Act, if that hospital wishes to apply for an increase in its FTE resident cap(s) available under section 1886(h)(8)(B)(i) of the Act, we proposed that the hospital must submit a completed application to CMS and that the application must be received on or before March 1, 2011.

We note that, although a hospital might be applying for an increase to its FTE caps either to start a new program or expand a particular program, the FTE caps are not program-specific; but rather, they are hospital-specific. A hospital, and not a particular residency training program, would be applying for an increase to its FTE caps. We proposed that all completed applications that are timely received according to the above deadlines would be evaluated by CMS according to the criteria described under section XXI.D.14. of this preamble for determining the priority distribution of FTE resident slots. Hospitals that satisfy at least one of the "demonstrated likelihood" criteria would be further evaluated by the evaluation criteria described below.

Comment: Commenters expressed concern regarding the proposed application deadline of December 1, 2010, for hospitals to apply for additional slots under section 5503. The commenters understand the short time frame CMS has to implement section 5503, but believe this deadline does not provide hospitals sufficient time after November 1, 2010, the date by which the final rule will be issued, to prepare their applications. The commenters noted that CMS proposed a second deadline of March 1, 2011, for certain hospitals that will be subject to an audit for purposes of determining a possible cap reduction, but those audits may not be completed by December 1, 2010. The commenters requested that CMS make March 1, 2011, the deadline for *all* hospitals to apply for slots under section 5503 since CMS would need to wait for the March 1 applications to be submitted before beginning the process of awarding slots anyway.

Response: While we agree with the commenters that more time is needed by hospitals after November 1, 2010, to review the final policies, gather documentation, and to submit the applications to CMS, we do not believe that it is necessary to extend the deadline to March 1, 2011 for all hospitals. Therefore, we are establishing the application deadline for hospitals requesting slots under section 5503 in this final rule to be Friday, January 21, 2011. However, if a hospital is notified that it will be audited for purposes of determining a possible cap reduction, such a hospital would be allowed to submit an application for additional cap slots by March 1, 2011.

Comment: One commenter urged CMS to reduce its proposed limit of 75 positions allowed for distribution to a single hospital in order to create opportunity for more institutions and more geographically diverse locations to meet requirements. The commenter

noted that it is highly likely that many of these positions would be used to sustain existing positions and, therefore, not meet the intent of the overall legislation. Additionally, the availability of positions in the environment must also be approved by the accrediting body that will have to evaluate the overall availability of teaching experiences and the impact on existing programs and existing complements of residents.

Response: As described in the August 3, 2010 proposed rule (75 FR 46390), section 5503 of the Affordable Care Act, which added a new section 1886(h)(8)(F) to the Act, specifically provides that a hospital may not receive more than 75 additional FTE slots under the section 5503 redistribution for direct GME and for IME, respectively. Therefore, a reduction to the limit of 75 positions for distribution to a single hospital is not authorized under the Affordable Care Act.

Comment: Another commenter noted that in order to be considered for increases to its FTE resident cap, a hospital must submit, as part of its application, its FTE resident counts and FTE resident caps for direct GME and IME in the most recent as-filed cost report. The commenter stated that if these worksheets are not audited, or at least reviewed by the Medicare contractor, there is no assurance of the accuracy of the number of FTE residents claimed by the provider. For consistency and accuracy purposes, the commenter recommended that the same source documents be used for determinations of both the increase and decrease in FTE caps, that is, a hospital's most recent cost report ending on or before March 23, 2010, which is subject to audit or desk review by the Medicare contractor.

Response: We agree that to the extent possible, the documentation used to determine whether a hospital's FTE resident caps will be reduced should be the same documentation used to determine whether a hospital qualifies for an increase in its FTE resident caps. As we stated above in response to a comment in section XXI.D.8.a. of this final rule, we believe that the cost reporting periods used to determine whether a hospital will receive a cap reduction must, at the very least, have been submitted to the Medicare contractor as of March 23, 2010. Furthermore, we do not believe it would be appropriate to include in the determination of which cost reports are used to establish a hospital's reference resident level, those cost reporting periods that occurred at the time the Affordable Care Act was in development. Rather, the cost reporting period used to assess the number of residents a hospital is training for the purpose of determining if it qualifies for an increase to its FTE resident cap should be a cost reporting period that reflects a number of FTE residents that a hospital is accustomed to training, not a number of FTE residents that is based on a hospital's attempt to meet the Demonstrated Likelihood Criteria or the 3-year primary care average requirement under section 1886(h)(8)(B)(ii)(I) of the Act. Therefore, we are clarifying in this final rule that the cost report data to be submitted with a hospital's application for additional slots and the cost reports used to establish a hospital's 3-year primary care average under section 1886(h)(8)(B)(ii)(I) of the Act must also be submitted to the Medicare contractor by March 23, 2010.

13. CMS Evaluation of Applications for Increases in FTE Resident Caps

In the August 3, 2010 proposed rule (75 FR 46400), we proposed to require hospitals to submit, with their applications for increases in their FTE resident caps, a completed copy of the CMS Evaluation Form. The CMS Evaluation Form will ask the hospital to check off which of the "demonstrated likelihood" criteria (described above in section XXI.D.11. of this preamble) the hospital meets. We also proposed to require that the hospital provide the documentation that supports the "demonstrated likelihood" criteria it has checked off on the Evaluation Form.

Assuming that the applicant hospital meets the "demonstrated likelihood" requirement, we proposed that the applicant hospital would indicate on the CMS Evaluation Form the category(ies) for which it believes it will qualify. We would use this indication to prioritize the applications. This prioritization is derived from sections 1886(h)(8)(C), (D), and (E) of the Act, as added by section 5503 of the Affordable Care Act. These sections established considerations in redistribution and a priority order that must be applied in determining the hospitals that will receive increases in their FTE caps. As discussed above, the first consideration in redistribution is that the applicant hospital must demonstrate the likelihood of filling the slots requested within the first three cost reporting periods beginning on or after July 1, 2011. Another consideration is "whether the hospital has an accredited rural training track" (as described in section 1886(h)(4)(H)(iv) of the Act). Accordingly, we proposed that, in distinguishing between hospitals within a priority category, and determining which hospitals will receive FTE cap increases, we would give preference to a hospital that has an accredited rural training track over a hospital that does not have such a program. Under section 1886(h)(4)(H)(iv) of the Act, as implemented in the regulations at § 413.79(k), an urban hospital that operates a rural training track (often known as separately accredited 1–2 tracks in family medicine) wherein residents rotate at the urban hospital for less than one-half of the duration of the program, and to a rural area for the remainder of the program, the urban hospital may include in its FTE count the FTE resident time spent training in the rural track, even if that time would be in excess of the hospital's FTE cap. We note that if an urban hospital is interested in starting a new rural training track, it need not apply for additional slots under section 1886(h)(8)(B)(i) of the Act. Rather, under the existing regulations at § 413.79(k), the urban hospital may receive an increase to its FTE cap to reflect FTE residents training in the rural track. (For more details on rural training tracks, and the direct GME and IME payment rules associated with them, we refer readers to 66 FR 39902, August 1, 2001, and 68 FR 45454, August 1, 2003.) However, because section 1886(h)(8)(C) of the Act states that the Secretary shall take into account "whether the hospital *has* an accredited rural training track" (emphasis added), we proposed that an applying urban hospital that either *has* a separately accredited rural training track, or can document that it *will have* a separately accredited rural training track as of July 1, 2011, may receive preference over a hospital that, all other things being equal, does not and will not have a rural training track by that date. We noted that section 1886(h)(8)(C) of the Act does not specify that a hospital must be applying for additional slots in order to expand its existing rural training track in order to qualify to receive additional slots. Rather, section 1886(h)(8)(C) of the Act merely states that "the Secretary *shall take into account* * * * whether the hospital has an accredited rural training track (as described in paragraph (4)(H)(iv))" (emphasis added). That is, the fact that an urban hospital *already has* (or, under the proposed rule and this final rule, would have as of July 1, 2011) a separately accredited rural training track is sufficient to give preference in redistribution to such a hospital.

Section 1886(h)(8)(D) of the Act instructs the Secretary to "distribute the

increase to hospitals based on the following factors":

• *Whether the hospital is located in a State with a resident-to-population ratio in the lowest quartile (as determined by the Secretary) (section 1886(h)(8)(D)(i) of the Act).* In order to determine which States are in the lowest quartile for resident-to-population ratios, in the August 3, 2010 proposed rule (75 FR 46400), we proposed to use three sources of data, and the latest data available for each of those three sources. First, we proposed to determine the number of allopathic residents in each State by using data from the ACGME's Data Resource Book for the Academic Year 2008–2009. As of publication of the proposed rule, this was the most recent data available from the ACGME. However, after publication of the proposed rule, the ACGME released its 2009–2010 Data Resource Book. Therefore, in this final rule, we are using data from the ACGME's Data Resource Book for the Academic Year 2009–2010. In this book, which is available free of charge on the ACGME's Web site, is a table titled "Number of Residents, by State" (*http://www.acgme.org/acWebsite/databook/2009–2010_ACGME_Data_Resource_Book.pdf*). This table lists each State (including Puerto Rico), and includes a column called "Total Residents." We are using the data from this column called "Total Residents" as part of the numerator to determine the resident-to-population ratio in each state. However, because these data only include residents enrolled in ACGME-accredited programs, we also proposed to add to these numbers the number of residents enrolled in AOA-accredited programs. We proposed to access data on the number of osteopathic residents in each State from the AOA, which was provided to CMS upon special request. These data are what is generally published in the AOA's *Journal of the American Osteopathic Association (JAOA).* For the proposed rule, we requested and received data from the AOA for the 2008–2009 academic year as well. Although these data were not to be published in the JAOA for some months, we received permission from the AOA to publish it in the proposed rule. For the final rule, we requested and received data from the AOA for the number of osteopathic residents in each State for the 2009–2010 academic year. These data are also presented in the form of a table listing each State (there are no osteopathic programs in Puerto Rico), and a column for the total number of residents in each State. Therefore, we proposed that the numerator for the ratio for each State would be the sum of the residents from the 2008–2009 ACGME's table for that State, and the residents from the 2008–2009 AOA table for that State. However, for this final rule, the numerator for the ratio for each State is the sum of the residents from the 2009–2010 ACGME's table for that State, and the residents from the 2009–2010 AOA table for that State.

We understand that, although graduates of allopathic medical schools are precluded from training in AOA-accredited programs, there is no similar prohibition on osteopathic residents training in allopathic programs. Because there are osteopathic residents who enroll and participate in allopathic ACGME-accredited programs, we want to ensure that there is no double counting of residents in the numerator. We have learned from the ACGME that their data in the ACGME Data Resource Book include osteopaths, but only those training in ACGME-accredited programs. The AOA data do not include osteopathic residents who are training in ACGME-accredited programs; AOA data only include osteopathic residents enrolled and training in AOA-accredited programs. Therefore, we do not believe there is a concern about double counting with respect to osteopathic residents training in allopathic programs. However, we also are aware that there are some programs that are dually accredited by the ACMGE, and the AOA, and residents completing these programs are able to sit for both the ABMS and the AOA board examination in that specialty. We understand that the ACGME will include a resident in its resident count as long as that resident is training in an ACGME-accredited program, even if that program is dually accredited. The AOA has the same practice of including in its total count of residents those who are in AOA-accredited programs, even if it is a dual eligible program. Therefore, there is some degree of unavoidable double counting of residents in the total count. However, we understand that, as of the publication of the proposed rule, the number of residents in dually-accredited programs was less than 500. We have not been able to receive an updated count of residents in dually accredited programs for this final rule. However, because 500 is only 0.43 percent of the combined ACGME and AOA 2009–2010 resident count of 117,191, we believe the effect of counting these residents by both the ACGME and AOA is negligible and would not harm the integrity of the data.

In the August 3, 2010 proposed rule (75 FR 46401), we proposed to define "resident" in "resident-to-population" ratio as actual individual residents, as opposed to the FTE resident figures that are used for Medicare payment purposes. We believe it is appropriate to define "residents" as actual individual residents in this instance because the intent behind this criterion is to identify those States that have low numbers of physicians-in-training in relation to the general population for which those physicians-in-training are providing health care services. An "FTE" measure, which is the measure used for most Medicare payment purposes, does not accurately reflect the number of individual physicians-in-training providing services in a State.

With regard to State population data to be used in the denominator of each State's resident-to-population ratio, we again proposed to use the latest available data on State populations. We proposed to use data from the Census Bureau that is from the 2000 Census, but that have been updated with the most recent data available as of July 1, 2009. We accessed these data from the following Web site: *http://www.census.gov/popest/states/states.html.* On this Web page, the following data can be found: State population datasets—Population, population change and estimated components of population change: April 1, 2000 to July 1, 2009 (NST–EST2009–alldata). We proposed to use the CSV file at this link. Specifically, we proposed to use the data for State population from the column called POPESTIMATE2009 (Column Q of the CSV spreadsheet). Therefore, we proposed to determine each State's resident-to-population ratio, and specifically those States that fall within the lowest quartile by using the sum of the 2008–2009 ACGME and AOA resident data for each State, as described above, in the numerator for each State, and by using the population data updated as of July 1, 2009, in the denominator for each State from the column called POPESTIMATE2009 in Column Q of the CSV spreadsheet. The following table has been updated for this final rule using 2009–2010 ACGME and AOA resident data. It lists each State, and is sorted by resident-to-population ratio from lowest to highest. The first 13 shaded States are the States in the lowest quartile.

BILLING CODE 4120–01–P

State Name	Census data as of July 1, 2009	ACGME resident data 2009-2010	AOA resident data 2009-2010	Total resident data	Resident to population ratio

District of Columbia	599,657	1,912	0	1,912	0.3188%

Based on the proposed data, the following States fall within the lowest quartile for resident-to-population ratios: Montana, Idaho, Alaska, Wyoming, Nevada, South Dakota, North Dakota, Mississippi, Florida, Puerto

Rico, Indiana, Arizona, and Georgia. Based on the revised finalized data, although the same States fall within the lowest quartile for resident-to-population ratios, the order changed somewhat as follows: Montana, Idaho, Alaska, Wyoming, South Dakota, Nevada, North Dakota, Mississippi, Indiana, Puerto Rico, Florida, Georgia, and Arizona. Accordingly, we proposed that, consistent with section 1886(h)(8)(D)(i) of the Act, a hospital located in any one of these States that applies for an increase to its FTE cap under section 1886(h)(8)(B) of the Act would receive preference over a hospital that is applying for an increase to its cap that is not located in one of these States.

Comment: One commenter requested that CMS use the most recent resident data from the 2009–2010 academic year in the calculation of the resident-to-population ratios. The commenter noted that since the academic year 2008–2009, there are 80 additional accredited programs and 1,904 additional residents according to the ACGME's web site.

Response: Since the CY 2011 OPPS/ASC proposed rule went on display at the **Federal Register** on July 2, 2010, the ACGME has posted the 2009–2010 Data Resource Book. As we explain in the preamble to this final rule, this book, which is available free of charge on the ACGME's Web site, has a table titled "Number of Residents, by State" (*http://www.acgme.org/acWebsite/databook/2009–2010_ACGME_Data_Resource_Book.pdf*). This table lists each State (including Puerto Rico), and includes a column called "Total Residents." We are using the data from this column called "Total Residents" as part of the numerator to determine the resident-to-population ratio in each state.

• *Whether the hospital is located in a State, a territory of the United States, or the District of Columbia that is among the top 10 States, territories, or Districts in terms of (1) the total population of the State, territory, or District living in an area designated (under such section 332(a)(1)(A)) as a health professional shortage area (as of the date of enactment of this paragraph); to (2) the total population of the State, territory, or District (as determined by the Secretary based on the most recent available population data published by the Bureau of the Census).*

In order to determine which applying hospitals fall within this priority category, we need to determine the total population living in a HPSA in each State, territory, or District computed "as of the date of enactment," and we need to determine the total population of each State, territory, or District "(as determined by the Secretary based on the most recent available population data published by the Bureau of the Census)." "Territory" is referring to Puerto Rico, which currently has teaching hospitals, and "District of Columbia" refers to Washington, DC. For ease of reference, and consistent with the definition of "State" at section 210 of the Act, we proposed to refer to "State, territory, or District" simply as "State." We have received data on the population of each HPSA from the Health Resources and Services Administration's (HRSA) Geospatial Warehouse. HRSA's Shortage Designation Branch develops shortage designation criteria and uses them to decide whether or not a geographic area, or population group, is a HPSA. HRSA updates HPSA statistics on its Web site on a daily basis, and we have requested and received the data reflective of the "date of enactment"; that is, March 23, 2010. This data, as of this date, remains the same for this final rule. Because HRSA updates the data on its Web site daily, the data as of March 23, 2010 are no longer available on its Web site. (General information on HPSAs and current data can be found on HRSA's Web site at: *http://bhpr.hrsa.gov/shortage/).*

HRSA designates three different kinds of HPSAs: Primary Care HPSAs, Dental HPSAs, and Mental Health HPSAs. While many areas may only be designated as one of these kinds of HPSAs, some areas may be designated as two or three of these kinds of areas. Thus, if we were to add the population in each State that is in a Primary Care HPSA, a Dental HPSA, and a Mental Health HPSA, we would be duplicating the HPSA populations in each State. Therefore, we proposed to use *only* the population in each State that is in a Primary Care HPSA. We believe that it is appropriate to choose to recognize only the Primary Care HPSAs in each State for the purpose of implementing section 5503 because section 5503 is intended to encourage an increase in the number of primary care residents that are currently being trained in hospitals, as is evidenced by the "Requirements" in section 1886(h)(8)(B)(ii) of the Act, as added by section 5503(a)(4), which requires hospitals that receive additional slots under this section to maintain a certain average number of primary care resident positions, and that not less than 75 percent of the redistributed positions must be awarded for slots used in a primary care or a general surgery residency.

With respect to data on each State's total population "as determined by the Secretary based on the most recent available population data published by the Bureau of the Census," we proposed to use the same data that we are using under the first priority category with regard to determining resident-to-population ratios, as explained above. These data, which are the most recent available, were last updated on July 1, 2009. As explained above, we accessed these data from the following Web site: *http://www.census.gov/popest/states/states.html.* On this Web page, the following data can be found: State population datasets—population change and estimated components of population change: April 1, 2000 to July 1, 2009 (NST–EST2009–alldata). We proposed to use the CSV file at this link. Specifically, we proposed to use the data for State population from the column called POPESTIMATE2009 (Column Q of the CSV spreadsheet).

The following table lists each State, its Primary Care HPSA population-to-State population ratio from highest to lowest, and whether that State falls within the top 10 States for such Primary Care HPSA population-to-State population ratios:

BILLING CODE 4120–01–P

State Name	Census data as of July 1, 2009	Primary Care HPSA	Primary Care HPSA to Population Ratio
Louisiana	4,492,076	3,119,598	69.4467%
Mississippi	2,951,996	1,781,774	60.3583%
Puerto Rico Commonwealth	3,967,288	2,282,408	57.5307%
New Mexico	2,009,671	1,036,774	51.5892%

BILLING CODE 4120–01–C

• *Whether the hospital is located in a rural area (as defined in section 1886(d)(2)(D)(ii) of the Act).* Section 1886(d)(2)(D)(ii) of the Act defines a rural area as any area outside a MSA. Under the existing regulations at § 412.62(f)(ii), an "urban area" means: (1) A Metropolitan Statistical Area (MSA) or New England County Metropolitan Area (NECMA); or (2) the following New England counties: Litchfield County, Connecticut; York County, Maine; Sagadahoc County, Maine; Merrimack County, New Hampshire; and Newport County, Rhode Island. Under existing § 412.62(f)(iii), a "rural area" means any area outside an urban area. Thus, for purposes of the amendments made by section 5503, in the August 3, 2010 proposed rule (75 FR 46406), we proposed that any hospital located in an area that is not in a MSA is a rural hospital, regardless of any reclassification under § 412.102 or § 412.103. We also pointed out that, since FY 2005, we no longer use the term MSA, but instead we use CBSA, or Core-Based Statistical Area. There are urban CBSAs, and rural CBSAs are areas outside of an urban CBSA. We note that this definition of "rural" is consistent with our policy concerning designation of wage index areas.

We also proposed that, in determining which applicant hospitals receive priority within the priority category of hospitals located in a State in the lowest quartile for resident-to-population ratios that hospitals in a State that is ranked *lower* in the quartile (with number one being the lowest) would receive preference over hospitals in states that are still within the quartile, but ranked higher. For example, all other things being equal, a hospital located in Montana would receive preference over a hospital located in Idaho, while this hospital would receive preference over a hospital located in Alaska, and so on. Similarly, we proposed that, in determining which applicant hospitals receive priority within the priority category of hospitals located in a State that is among the top 10 of these areas in terms of the ratio of Primary Care HPSA population to total population, hospitals in an area that is ranked *higher* in the top 10 (with number 1 being highest and number 10 being lowest) would receive preference over hospitals in an area that are still within the top 10, but ranked lower. For example, all other things being equal, a hospital located in Louisiana would receive preference over a hospital located in Mississippi, while a hospital in Mississippi would receive preference over a hospital located in Puerto Rico, and so on.

Comment: A couple of commenters urged CMS to consider expanding the slot redistribution eligibility to all States, not just those hospitals in States with a low resident-to-population ratio or high proportion of population living in a HPSA or in a rural area. The commenters stated that allowing all states to be eligible will be a faster way to increase the physician supply. The commenters believed that restricting redistribution eligibility would deny training opportunities to qualified residents that may be training at hospitals that are already over their caps. Other commenters also urged CMS to consider a more equitable method to redistribute unused slots to hospitals over their caps.

Response: An action to allow hospitals in all states to be eligible for redistributed slots under section 5503 is not authorized under the Affordable Care Act. As described in the August 3, 2010 proposed rule (75 FR 46390), section 5503 of the Affordable Care Act, which added a new section 1886(h)(8)(E) to the Act, specifically directs the Secretary to distribute 70 percent of the resident slots to hospitals located in States with resident-to-population ratios in the lowest quartile and 30 percent to hospitals located in a State, a territory of the United States, or the District of Columbia that are among the top 10 States, territories, or Districts in terms of the ratio of the total population living in an area designated as a health professional shortage area as of March 23, 2010, to the total population, and to hospitals located in rural areas. Therefore, only those hospitals in States, territories, or

Districts that fall into the aforementioned categories will be considered for redistributions under section 5503.

Comment: One commenter asked CMS to define the cities of Anchorage and Fairbanks, Alaska as rural. The commenter noted that even though the majority of Alaskans live in Anchorage, Fairbanks, or the Mat-Su (57%), most hospitals outside of Anchorage and Fairbanks are not large enough to meet basic requirements for accreditation by the ACGME. Therefore, Anchorage and Fairbanks should be added to the Priority Category and Evaluation Criteria list of rural areas.

Response: We cannot accommodate the commenter's request to classify Anchorage and Fairbanks as rural areas because the reference to rural areas under section 5503 regarding giving preference to hospitals located in rural areas is to subsection (d)(2)(D)(ii) of the Act. Section 1886(d)(2)(D)(ii) of the Act defines a rural area as any area outside a MSA. Under the existing regulations at § 412.62(f)(ii), an "urban area" means, in part, a MSA. Under existing § 412.62(f)(iii), a "rural area" means any area outside an urban area. Thus, for purposes of the amendments made by section 5503, any hospital located in an area that is not in a MSA is a rural hospital, regardless of any reclassification under § 412.102 or § 412.103. We also pointed out in the proposed rule that, since FY 2005, we no longer use the term MSA, but instead we use CBSA, or Core-Based Statistical Area (75 FR 46406). Further, we note that Alaska is already given preference under section 5503 since it is one of the states that is in the lowest quartile for resident-to-population ratios.

As we described above, we proposed that an applicant hospital indicate on the CMS Evaluation Form the category(ies) for which it believes it will qualify, and we will use this indication to prioritize the applications. Each of the categories (described below) was derived from the priorities established by section 1886(h)(8)(D) of the Act, as added by section 5503 of the Affordable Care Act. We proposed to use the following categories to determine the order in which hospitals would be eligible to receive increases in their FTE resident caps:

- *First Level Priority Category:* The hospital is in a State whose resident-to-population ratio is within the lowest quartile, AND the hospital is in a State whose Primary Care HPSA to population ratio is in the top 10 States, AND the hospital is located in a rural area.
- *Second Level Priority Category:* The hospital is in a State whose resident-to-population ratio is within the lowest quartile, and is *either* in a State whose Primary Care HPSA to population ratio is in the top 10 States, *or* it is located in a rural area, *or* is an urban hospital and has, or will have as of July 1, 2011 (we note the proposed rule incorrectly stated 2010), a rural training track.
- *Third Level Priority Category:* The hospital is in a State whose resident-to-population ratio is within the lowest quartile.
- *Fourth Level Priority Category:* The hospital is in a State whose Primary Care HPSA to population ratio is in the top 10 States, and either the hospital is located in a rural area *or* the hospital is an urban hospital and has, *or* will have as of July 1, 2011 (we note the proposed rule incorrectly stated 2010), a rural training track.
- *Fifth Level Priority Category:* The hospital is in a State whose Primary Care HPSA to population ratio is in the top 10 States, *or* the hospital is located in a rural area.

We believe it is appropriate to establish priority level categories based on the fact that some hospitals that apply for the additional resident slots may fit into more than one of the three statutory priority categories listed in section 1886(h)(8)(D) of the Act. Therefore, we proposed to give consideration first to those hospitals that meet more than one of the statutory priority categories over those hospitals that meet only one of the statutory priorities. We further proposed that a hospital that is in a State whose resident-to-population ratio is within the lowest quartile would receive priority over a hospital that is not located in one of these States. We believe this is consistent with the direction established at section 1886(h)(8)(E)(i) of the Act which specifies that the Secretary shall reserve 70 percent of all positions available for distribution for hospitals in a State whose resident-to-population ratio is within the lowest quartile. Only 30 percent of the positions are to be distributed to hospitals in States whose Primary Care HPSA to population ratio is in the top 10 States, and hospitals located in rural areas. In addition, as discussed above, the first consideration in redistribution under section 1886(h)(8)(C) of the Act is that the applicant hospital must demonstrate the likelihood of filling the slots requested within the first three cost reporting periods beginning on or after July 1, 2011. The second consideration is "whether the hospital has an accredited rural training track" (as described in section 1886(h)(4)(H)(iv) of the Act). Accordingly, we proposed that, in distinguishing between hospitals within priority categories, and in determining which hospitals qualify to receive additional slots, we would give preference to a hospital that has an accredited rural training track as compared to a hospital that does not have such a program.

Because section 1886(h)(8)(E) of the Act specifies that 70 percent of the slots are to be reserved for hospitals that are in a State whose resident-to-population ratio is within the lowest quartile, and 30 percent of the positions are to be reserved for hospitals in States whose Primary Care HPSA to population ratio is in the top 10 States, and hospitals located in rural areas, we proposed that no slots would be given to hospitals that do not fit within either of these categories.

Comment: Some commenters reflected on the method CMS proposed to allocate the slots, in which there would be a single "redistribution pool", out of which 70 percent of the slots will first be awarded to hospitals in Priority Categories 1, 2, and 3, with the remaining 30 percent of the slots being awarded to hospitals in Priority Categories 4 and 5. The commenters further noticed that hospitals that qualify for slots from both the "70-percent pool" and the "30-percent pool" would be awarded slots first, with slots being awarded to these hospitals from only the "70-percent pool." The commenters believed that hospitals in States further down the low resident-to-population list should "not have their chances of being awarded slots unduly diminished by hospitals that qualify under both categories." The commenters believed it is more equitable to allocate slots to hospitals that qualify for both pools by prorating the number of slots awarded between both pools. The commenters included an example where, for a rural hospital in a State on the low resident-to-population list that is awarded 10 slots through the redistribution program, 70 percent, or 7 slots, would come from the "70-percent pool" while 30 percent, or 3 slots would come from the "30-percent pool." The commenters believed that "this result is more easily achieved with two distinct pools of slots, but we defer to CMS as to how to implement the mechanics of prorating."

One commenter suggested that CMS should review and modify its complex prioritization criteria to ensure that 70 percent of the slots go to hospitals in States with low resident-to-population ratios. The commenter noted that under the priority criteria that CMS proposed,

it is possible that a hospital located in a lowest quartile resident-to-population State would not receive any slots. The commenter argued that this was not the intent of Congress and that CMS should develop a process that ensures that all hospitals in the lowest quartile resident-to-population States that apply and meet the demonstrated likelihood criteria receive at least some caps through the redistribution process.

Response: On page 46409 of the August 3, 2010 proposed rule, we discussed the scenario where a hospital could qualify to receive slots from both the "70-percent pool" and the "30-percent pool." We stated that we considered a "possible scenario that could occur with respect to hospitals that fall into the Second Level Priority Category: The hospital is in a State whose resident-to-population ratio is within the lowest quartile, and is *either* in a State whose Primary Care HPSA to population ratio is in the top 10 States, *or* it is located in a rural area, *or* is an urban hospital and has or will have as of July 1, 2011, a rural training track. Because a hospital in this second level priority category is located both in a State whose resident-to-population ratio is within the lowest quartile, and is *either* in a State whose Primary Care HPSA to population ratio is in the top 10 States, *or* it is located in a rural area, we believe that its request for additional slots must first be fulfilled from the "70-percent pool." However, if there are insufficient slots in the "70-percent pool" to satisfy the requests of all otherwise qualified applicants in the Second Level Priority Category, then, rather than immediately prorating the remaining slots in the "70-percent pool" among the applicable hospitals in the second level priority category, we proposed to draw from the "30-percent pool" to grant the full FTE cap increases (as applicable) to qualifying hospitals in the second level priority category."

The commenters raise a fair point, in that hospitals that qualify to fit into either the "70-percent pool" or the "30-percent pool" (but not both) should not have their chances of receiving their fair share of slots from the respective pools diminished by hospitals that fall into priority categories qualifying for slots from both pools. Section 5503 essentially requires that two distinct pools of slots be created; one for hospitals located in States that are in the lowest quartile for resident-to-population ratios, and one for hospitals located in States that are the top 10 States for Primary Care HPSA to population ratios, or for rural hospitals. We have reconsidered our proposed method described above, which ranks a hospital that is in a State whose resident-to-population ratio is within the lowest quartile, *and* the hospital is located in a State whose Primary Care HPSA to population ratio is in the top 10 States, *and/or* the hospital is rural, above a hospital that is only located in a State whose resident-to-population ratio is within the lowest quartile. We realize that these "doubled" Priority Categories allow for the possibility that a hospital located only in States whose resident-to-population ratios are in the lowest quartile may have its chances of receiving slots diminished by hospitals in States that fall within both priority categories. Therefore, in this final rule, we are reducing the number and revising the Priority Categories as follows:

- *First Level Priority Category:* The hospital is in a State whose resident-to-population ratio is within the lowest quartile, AND it is an urban hospital that has, or will have as of July 1, 2011, a rural training track.
- *Second Level Priority Category:* The hospital is in a State whose resident-to-population ratio is within the lowest quartile.
- *Third Level Priority Category:* The hospital is in a State whose Primary Care HPSA to population ratio is in the top 10 States, AND the hospital is an urban hospital that has, or will have as of July 1, 2011, a rural training track.
- *Fourth Level Priority Category:* The hospital is in a State whose Primary Care HPSA to population ratio is in the top 10 States, OR the hospital is located in a rural area.

Priority Level Categories 1 and 2 are for distributing slots in the 70-percent pool, and Priority Level Categories 3 and 4 are for distributing slots in the 30-percent pool. With regard to a hospital that is located in a State that falls into both priority categories, such a hospital's application would be evaluated first based on its Evaluation Criteria within the context of the First and Second Level Priority Categories, and if there are not enough slots left in the 70-percent pool to satisfy the hospital's request, we believe the hospital must be allowed to receive the remainder of its otherwise deserved slots from the 30-percent pool, based on its Evaluation Criteria within the context of the Third and Fourth Level Priority Categories. In distributing the slots from both the 70-percent and the 30-percent pools, we would be sure to do so in a way to ensure that a hospital that falls into both priority categories should not be at a greater disadvantage than a hospital that only is in a State that is in the lowest quartile for resident-to-population ratios.

We are also finalizing our proposal that, in determining which applicant hospitals receive priority within the priority category of hospitals located in a State in the lowest quartile for resident-to-population ratios that hospitals in a State that is ranked *lower* in the quartile (with number one being the lowest) would receive preference over hospitals in States that are still within the quartile, but ranked higher (75 FR 46406). For example, all other things being equal, a hospital located in Montana would receive preference over a hospital located in Idaho, while this hospital would receive preference over a hospital located in Alaska, and so on. Similarly, we are finalizing our proposal that, in determining which applicant hospitals receive priority within the priority category of hospitals located in a State that is among the top 10 of these areas in terms of the ratio of Primary Care HPSA population to total population, hospitals in an area that is ranked *higher* in the top 10 (with number 1 being highest and number 10 being lowest) would receive preference over hospitals in an area that are still within the top 10, but ranked lower. For example, all other things being equal, a hospital located in Louisiana would receive preference over a hospital located in Mississippi, while a hospital in Mississippi would receive preference over a hospital located in Puerto Rico, and so on.

Comment: One commenter stated that the "30-percent pool" must be maintained for distribution of the resident FTE cap slots to rural hospitals as described in section 1886(h)(8)(D)(iii) of the Act. The commenter asserted that "to the extent that this proposal were to diminish the 30-percent pool to the degree that an eligible rural teaching hospital that is not located in a State whose resident-to-population ratio is in the lowest quartile would be contrary to the intent of Congress in establishing the 30-percent pool for hospitals that include rural teaching hospitals." The commenter stated that the Secretary must interpret section 5503 of the Affordable Care Act to reserve some slots from the '30-percent pool' for rural teaching hospitals, that is, hospitals that are rural hospitals but may not also meet either of the other preference criteria at sections 1886(h)(8)(D)(i) and 1886(h)(8)(D)(ii) of the Act.

Response: As we stated in response to a previous comment, we agree that hospitals within States whose resident-to-population ratios are in the lowest quartile should receive 70 percent of the available slots, while hospitals located in States whose Primary Care HPSA to population ratio is in the top 10 States,

or hospitals located in rural areas should receive 30 percent of the available slots. Thus, the commenter need not be concerned that the chances of a rural hospital receiving slots from the '30-percent pool' would be diminished by those slots being diverted to a hospital that is located in a State whose resident-to-population ratio is in the lowest quartile. However, we disagree with the commenter that the Secretary "must interpret section 5503 of the Affordable Care Act to reserve some slots from the "30-percent pool" for rural teaching hospitals" that may not also be located in States with the lowest resident-to-population ratios or States in the top 10 for Primary Care HPSA to population ratios. We note that Congress intentionally placed hospitals located in rural areas and in States in the top 10 for Primary Care HPSA to population ratios *on equal footing,* by specifying clearly that hospitals in both these categories qualify for 30 percent of the redistributed slots. Therefore, all other things being equal, rural hospitals that fit within the final Fourth Level Priority Category, would receive equal preference with hospitals in States whose Primary Care HPSA to population ratio is in the top 10 States. The hospitals, both urban and rural, that fall within this Fourth Level Priority Category would be ranked based on the scores they receive on the applicable Evaluation Criteria, with a higher scoring applicant receiving slots before a lower scoring applicant.

Comment: One commenter stated that section 5503 must be interpreted in a way that gives preference to hospitals located in rural areas that sponsor training programs in the same way as hospitals that have an accredited rural track. This commenter stated that even though it may be less common for a rural hospital to be large and sophisticated enough to support or sponsor teaching programs, these rural hospitals should be eligible for preference under section 1886(h)(8)(C) of the Act. Further, the commenter asserted that a training program located at a teaching hospital in a rural area is even more "rural" than a rural track training program because the overwhelming majority of the training takes place in a rural area, therefore it should meet the second redistribution consideration.

Response: We understand that rural hospitals that engage in GME activities, whether they sponsor those activities directly, or serve as a training site for a program sponsored by another institution, provide valuable health care services to underserved areas. However, we do not believe it is necessary to give additional preference to rural hospitals, above that which is already provided for by section 5503. Section 1886(h)(8)(D)(iii) already provides that hospitals located in rural areas should receive some part of the "30-percent pool." This designation provides rural hospitals with a significant advantage for receiving redistributed slots relative to other hospitals. We also note that we proposed an evaluation criterion, which we are finalizing, that provides a point for rural hospitals that serve as a training site for a rural training track program. Therefore, we do not believe it is necessary to modify the priority categories to give additional preference to rural hospitals that serve as training sites for rural training tracks (which are sponsored by urban hospitals).

After consideration of the public comments we received, in this final rule, we are reducing the number of Priority Categories from five to four, and we are also significantly revising them, as discussed above. We are also finalizing our proposal that, in determining which applicant hospitals receive priority within the priority category of hospitals located in a State in the lowest quartile for resident-to-population ratios that hospitals in a State that is ranked *lower* in the quartile (with number one being the lowest) would receive preference over hospitals in States that are still within the quartile, but ranked higher (75 FR 46406). Similarly, we are finalizing our proposal that, in determining which applicant hospitals receive priority within the priority category of hospitals located in a State that is among the top 10 of these areas in terms of the ratio of Primary Care HPSA population to total population, hospitals in an area that is ranked *higher* in the top 10 (with number 1 being highest and number 10 being lowest) would receive preference over hospitals in an area that are still within the top 10, but ranked lower.

14. CMS Evaluation of Application for Increases in FTE Resident Caps—Evaluation Criteria

We anticipate that there will be a limited number of slots available for distribution from the redistribution pool, while there will be a great demand for those limited slots. Therefore, as we did when implementing section 422 of Public Law 108–173, in the August 3, 2010 proposed rule (75 FR 46406), we proposed to use additional criteria (some of which are the same as those used to implement section 422) for evaluating the applications for increases in hospitals' FTE resident caps within each of the five (we note the proposed rule incorrectly stated seven) level priority categories described above under section 5503. (In this final rule, there are four Level Priority Categories). In addition, in implementing section 5503, we proposed to assign a certain number of points to each evaluation criterion, such that some will be worth more points than others. We noted that the criteria are not mutually exclusive. Hospitals may qualify for a number of different criteria and their "score" is the total point value for all criteria met by the hospital for each program. Because we anticipate that the redistribution pool under section 5503 will be smaller than that under section 422, we believe a more rigorous and competitive ranking system is appropriate under section 5503. Thus, we proposed to assign a different amount of points to each Evaluation Criterion, rather than just assigning one point to each.

Evaluation Criterion One. The hospital that is requesting the increase in its FTE resident cap(s) has a Medicare inpatient utilization over 60 percent, as reflected in at least two of the hospital's last three most recent audited cost reporting periods for which there is a settled cost report. (5 Points) We have selected 60 percent utilization because we believe that level would identify hospitals where Medicare beneficiaries will benefit the most from the presence of a residency program, and, although the applicant hospital may be urban or rural, it is consistent with the utilization percentage required for Medicare-dependent, small rural hospitals (MDHs) as specified in § 412.108. In addition, it identifies a type of hospital that warrants atypical treatment by the Medicare program because it is so reliant on Medicare funding.

Evaluation Criterion Two. The hospital will use additional slots to establish a new geriatrics residency program, or to add residents to an existing geriatrics program. (5 Points) Section 5503 places a particular emphasis on increasing the number of residency positions in primary care specialties, as evidenced by the requirements at sections 1886(h)(8)(B)(ii)(I) and (II) of the Act that a hospital that receives slots must maintain at least the same number of primary care residents as it had during the three most recent cost reporting periods prior to enactment, and that not less than 75 percent of additional positions received must be in a primary care or a general surgery residency. Geriatrics is included in the definition of "primary care resident" at section 1886(h)(5)(H) of the Act. We believe that, of all the medical specialties, geriatrics is the one specialty that is

devoted primarily to the care of the elderly, including Medicare beneficiaries. As such, we proposed to give special consideration to geriatric programs to meet the "fill rate" criterion for demonstrating the likelihood of filling FTE resident slots under section 5503. Geriatrics is a subspecialty of family practice or internal medicine. We proposed that, for the purposes of meeting the 85 percent fill rate criterion, we would allow hospitals that are starting a new geriatrics program or expanding an existing geriatric program to use the fill rate associated with the overall specialty program (rather than the fill rate for the geriatric subspecialty) to meet this demonstrated likelihood criterion.

Evaluation Criterion Three. The hospital will use additional slots to establish a new or expand an existing primary care program with a demonstrated focus on training residents to pursue careers in primary care, rather than in nonprimary subspecialties of those primary care programs (for example, the hospital has an internal medicine program with a designated primary care track). (3 Points) As stated previously, section 5503 places a particular emphasis on encouraging the growth in the number of primary care residents, and specifically, physicians who practice in primary care, rather than only completing a primary care residency as a prerequisite for further subspecialty training. Although this proposed Evaluation Criterion applies to any primary care specialty, according to the 2010–2011 ACGME Green Book, 30.1 percent of accredited internal medicine programs offer a primary care track. However, the ACGME does not have separate standards for or does not separately accredit primary care tracks from categorical primary care programs. We understand that, particularly for internal medicine residents, these tracks are a way for graduating medical students who are interested in primary care to declare that interest early on, and in many cases, actually match into an internal medicine program with a primary care track through the National Residency Match Program. These residents may pursue their interest in primary care by choosing to do more electives in ambulatory and community-based settings throughout the 3 years of primary care training than residents with an interest in specialization might do. We believe that encouraging growth of these programs will increase the number of primary care practitioners. Therefore, we proposed to give special consideration to hospitals that are applying for additional slots to start or expand a program(s) that particularly focuses on residents who wish to pursue careers in primary care, and we would prioritize among hospitals that are applying for slots in a primary care program(s) accordingly. One example of a hospital that demonstrates a focus on training residents to pursue careers in primary care is a hospital that has a primary care track in internal medicine. We proposed that one way hospitals may qualify for a point under this evaluation criterion is by documenting that they are advertising that they have an internal medicine program with a primary care track in the March 2011 National Residency Match Program.

Evaluation Criterion Four. The hospital will use all the additional slots to establish a new or expand an existing primary care residency program or general surgery program. (5 Points) "Primary care resident" is defined at section 1886(h)(5)(H) of the Act as a resident enrolled in an approved medical residency training program in family medicine, general internal medicine, general pediatrics, preventive medicine, geriatric medicine, or osteopathic general practice. Section 1886(h)(8)(B)(ii)(II) of the Act states that not less than 75 percent of additional positions received must be in a primary care or a general surgery residency. Therefore, we proposed to award 5 points to a hospital that goes beyond this minimum requirement, and documents that it will use *all* of the slots received for either primary care or general surgery programs.

Evaluation Criterion Five. The hospital is located in a Primary Care HPSA. (2 Points) We believe this evaluation criterion is consistent with the goal of reducing the shortage of primary care physicians, and increasing access to care in underserved areas.

Evaluation Criterion Six. The hospital is in a rural area (as defined under section 1886(d)(2)(D)(ii) of the Act) and is or will be on or after July 1, 2011, a training site for a rural track residency program (as specified under § 413.79(k)), but is unable to count all of the FTE residents training in the rural track because the rural hospital's FTE cap is lower than its unweighted count of allopathic or osteopathic FTE residents as of portions of cost reporting periods on or after July 1, 2011. (1 Point) We understand that there are some rural hospitals that serve as training sites for an urban hospital's rural training track. The residents in the rural track are counted in the urban hospital's FTE count, but because the rural training tracks are not necessarily considered "new" medical residency programs according to the regulations at § 413.79(l), the rural hospital cannot receive an increase in its FTE caps under § 413.79(e)(3) and, therefore, cannot receive direct GME and IME payments for training all or some of those residents. The rural hospital may be training residents in excess of its FTE resident cap prior to July 1, 2011 and, therefore, cannot receive IME or direct GME payment for some or all of the FTEs in the rural training track, or it wishes to expand its rural training track above its FTE resident cap on or after July 1, 2011. We proposed this evaluation criterion as a remedy to these scenarios to allow the rural hospital the possibility of receiving payment for FTEs in its rural training track.

We proposed to use these criteria to evaluate the applications by hospitals for increases in their FTE resident caps that fall within each of the five (we note that the proposed rule incorrectly stated seven) level priority categories. (In this final rule, there are four Level Priority Categories). We proposed to place each application in the appropriate priority level category based on a review of the information a hospital checks off on the proposed CMS Evaluation Form for each allopathic and osteopathic specialty program requested by the applicant hospital, and the corresponding requested FTE cap increase. We proposed to place all of these evaluation criteria on the CMS Evaluation Form and to ask the hospital to check off which criteria on the form apply for each specialty program for which an FTE cap increase is requested. Based on the evaluation criteria checked off on the form, we proposed to score each CMS Evaluation Form. The higher-scoring CMS Evaluation Form(s) for each applicant hospital within each level priority category would be awarded the FTE resident cap increases first. It is possible that a hospital may qualify for multiple points for the same program. For example, if a hospital would be applying for slots to start a primary care track within an internal medicine program, and also would be using *all* of the slots it receives in that internal medicine program, the hospital may receive points both for Evaluation Criterion Three and Evaluation Criterion Four. Similarly, if a hospital would be applying for slots to start or expand a geriatrics program, and the additional slots would all be used for the geriatrics program, then the hospital may receive points for both Evaluation Criterion Two and Evaluation Criterion Four. Further, as specified by section 1886(h)(8)(E) of the Act, 70 percent of all positions are reserved to be

distributed to qualifying hospitals that are in States with resident-to-population ratios in the lowest quartile, and 30 percent of the positions are reserved to go to hospitals that are located in States with HPSA population to State population ratios within the top 10 and to rural hospitals. As we described above, we proposed to award the cap increases in the order of the five (we note the proposed rule incorrectly stated seven) specified level priority categories because, as a general rule, we believe hospitals that meet more than one of the statutory priorities should be awarded the increases in their FTE resident caps first before other hospitals. (In this final rule, there are four Level Priority Categories). We also believe that hospitals that meet a higher statutory priority category should receive first consideration over hospitals that meet lower statutory priorities. Furthermore, in the case where, for example, Hospital A's application for a program falls within the Level Priority Category One, but scores no points on the evaluation criteria on the CMS Evaluation Form for that program, and Hospital B's application for a program falls within the Level Priority Category Two, and scored 5 points on the evaluation criteria on the CMS Evaluation Form for the program, Hospital A would receive the section 5503 cap increase *before* Hospital B, because Hospital A qualified to be in the higher level priority category.

Thus, first level priority category hospitals that score highest on the evaluation criteria on the CMS Evaluation Form for a particular specialty program would receive the increases in their FTE resident caps first. For example, if Hospital D is a hospital that is located in Idaho, thereby falling within the second level priority category, and Hospital D checks off on the CMS Evaluation Form that it has a Medicare utilization of 60 percent (5 points), is using all the slots to expand a primary care residency program (5 points), and is located in a Primary Care HPSA (2 points), Hospital D would receive a score of 12 points on the completed CMS Evaluation Form. We proposed that we would first award FTE cap increases to hospitals whose CMS Evaluation Forms for a particular program receive the most points (if there are any), and then to those with successively fewer points within the level priority category. Hospital D would receive the increase in its FTE resident cap(s) requested on its application only after all the hospitals in the first level priority category whose applications receive 13 or more points are awarded their requests first. We proposed to proceed through each level priority category accordingly, and only move on to distribute slots to hospitals in the next priority level category once all the qualifying applicants in the previous priority level category have received slots. Once we have distributed 70 percent of the slots to hospitals within States with resident-to-population ratios in the lowest quartile in accordance with the First and Second Level Priority Categories (or awarded increases to all qualified applicant hospitals located in States with resident-to-population ratios in the lowest quartile), we proposed to then distribute the remaining slots to hospitals in the Third and Fourth Level Priority Categories. Because of this requirement that 70 percent of the slots be reserved for distribution to hospitals within States with resident-to-population ratios in the lowest quartile, it is possible that after first distributing slots to hospitals with the highest scores on their CMS Evaluation Form, if there are requests for slots by those hospitals which in the aggregate exceed the 70 percent of slots available, there may be some remaining qualifying hospitals within the same priority level category that receive the same score on the CMS Evaluation Form. Thus, we would have no way of distinguishing among these hospitals of equal rank. If this situation occurs, we proposed to prorate the remaining amount of slots in the "70-percent pool", and distribute an equal share of slots to these hospitals of equal rank. If a similar situation occurs within the "30-percent pool", we also proposed to prorate the remaining amount of slots in the "30-percent pool", and distribute an equal share of slots to hospitals of equal rank.

For example, assume all applicant hospitals in the First Level Priority Category receive the requested increases in their FTE resident caps, and that we have awarded cap increases for all the Second Level Priority Category hospitals that scored 5 or above on their CMS Evaluation Forms for each residency program. We next evaluate hospital applications and accompanying CMS Evaluation Forms in the Second Level Priority Category (The hospital is in a State whose resident-to-population ratio is within the lowest quartile) with fewer than 5 points and we find that there is only a sufficient number of resident slots remaining in the estimated "70-percent pool" to grant half of the requests for slots from hospitals that scored 4 points. We proposed to prorate all of the remaining FTEs among the 4-point CMS Evaluation Forms and accompanying applications in the Second Level Priority Category. Thus, after awarding slots to hospitals in the Second Level Priority Category with at least 5 points, and to hospitals in the First Level Priority Category, if we could have awarded a total of 200 FTE slots for direct GME and 185 FTE slots for IME to only 50 percent of the 4-point CMS Evaluation Forms in the Second Level Priority Category (at the point that the estimated "70-percent pool" of FTE slots is spent), we proposed to divide all of the 200 FTE slots remaining in the 70-percent pool for direct GME and 185 FTE slots for IME among *all* of the 4-point CMS Evaluation Forms and accompanying applications in that Second Level Priority Category, no matter what level of FTE resident cap increase was requested on the individual hospital's application, but not to exceed the number of slots a hospital requested for IME and direct GME respectively.

We also considered another possible scenario that could occur with respect to hospitals that fall into the proposed Second Level Priority Category: The hospital is in a State whose resident-to-population ratio is within the lowest quartile, and is either in a State whose Primary Care HPSA to population ratio is in the top 10 States, or it is located in a rural area, or is an urban hospital and has or will have as of July 1, 2010, a rural training track. Because a hospital in the proposed Second Level Priority Category is located both in a State whose resident-to-population ratio is within the lowest quartile, and is either in a State whose Primary Care HPSA to population ratio is in the top 10 States, or it is located in a rural area, we believed that its request for additional slots must first be fulfilled from the "70-percent pool." However, if there are insufficient slots in the "70-percent pool" to satisfy the requests of all otherwise qualified applicants in the Second Level Priority Category, then, rather than immediately prorating the remaining slots in the "70-percent pool" among the applicable hospitals in the proposed Second Level Priority Category, we proposed to draw from the "30-percent pool" to grant the full FTE cap increases (as applicable) to qualifying hospitals in the proposed Second Level Priority Category. (We note that the proposed Second Level Priority Category and its attending policy were changed in this final rule).

Alternatively, although unlikely, we recognize that the reverse situation may occur, where there may not be a sufficient number of qualified applicants or requests for FTEs in order to distribute at least 70 percent of the

slots to hospitals located in the 13 States whose resident-to-population ratios are in the lowest quartile (the First and Second Level Priority Categories). Should this occur, we proposed to begin evaluating applications from the next category of qualifying hospitals (that is, those located in States that are among the top 10 States for Primary Care HPSA to population ratios, and rural hospitals—the Third and Fourth Level Priority Categories), and potentially distribute more than 30 percent of the slots to hospitals in those latter categories.

We recognize the complexity of the proposed evaluation process for the award of increases in hospital's FTE resident caps under section 1886(h)(8)(B) of the Act. Therefore, we included the following examples depicting the proposed procedures:

Example 1

Hospital H is an urban hospital located in a State that is in the lowest quartile for resident-to-population ratios. Hospital H can demonstrate the likelihood that it will fill the requested five FTEs resident slots for direct GME and IME for expanding a geriatric program because it is currently training a number of FTE residents that exceeds both of its FTE caps, and has attached to its application for the increase a copy of Hospital H's past three Medicare cost reports (as filed or audited, whichever is most recent and available), which documents on Worksheet E, Part A, Worksheet E–3, Part IV, and Worksheet E–3, Part VI that, according to the resident counts and the FTE resident caps, Hospital H is training residents in excess of its caps. Hospital H is also located in a Primary Care HPSA (but is not located in a State that is among the top 10 States in terms of its Primary Care HPSA population to State population ratio).

We would evaluate Hospital H's application as follows: Hospital H is in the Second Level Priority Category (The hospital is in a State whose resident-to-population ratio is within the lowest quartile), and receives a score of 12 (expanding a geriatrics program-Evaluation Criterion Two—5 points, using all slots for a primary care residency program-Evaluation Criterion Four—5 points, and is located in a Primary Care HPSA–Evaluation Criterion Five—2 points).

Example 2

Hospital J is a rural hospital located in Montana. Hospital J is a rotation site for an urban hospital's family practice rural training track program, but is unable to count all of the FTE residents training in the rural track because Hospital J's FTE cap is lower than its unweighted count of allopathic or osteopathic FTE residents as of portions of cost reporting periods on or after July 1, 2011. Hospital J wishes to expand the number of FTE residents training in the family practice rural training track. Hospital J also wishes to serve as a training site for one pediatrics resident in a pediatrics program that already exists at the urban hospital (that is, it is not a new pediatrics program).

Hospital J would need to submit two CMS Evaluation Forms; one for family practice and another for pediatrics, and we would evaluate each accordingly. Both requests would put the hospital in the Second Level Priority Category (The hospital is in a State whose resident-to-population ratio is within the lowest quartile), and it can demonstrate the likelihood of filling the slots (because it is already over its FTE caps based on the family medicine residents it is training in the rural training track, and together with the urban hospital, it has requested from the ACGME accreditation to expand the number of family practice residents training in the rural training track and to receive a pediatrics resident). For the family practice request, Hospital J would receive 5 points under Evaluation Criterion Four because *all* the slots it is requesting (that is, family practice *and* pediatrics) are for primary care programs, and it would receive 1 point under Evaluation Criterion Six because it is requesting the family practice slots for its rural training track, for a total of 6 points for the family practice request. For the pediatrics request, Hospital J would be placed in the Second Level Priority Category, and receives 5 points under Evaluation Criterion Four because *all* the slots it is requesting (that is, family practice and pediatrics) are for primary care programs.

Comment: Some commenters objected to the 5 points that CMS proposed to award to a hospital under Evaluation Criterion One: *The hospital that is requesting the increase in its FTE residents cap(s) has a Medicare inpatient utilization over 60 percent, as reflected in at least two of the hospital's last three most recent cost reporting periods for which there is a settled cost report (5 points*). The commenters urged CMS to reduce the number of points awarded from 5 to 1, asserting that "CMS pays hospitals their proportionate Medicare share for their resident training costs, regardless of what that Medicare share may be, and hospitals with smaller Medicare utilization numbers have no less need for Medicare support for their residency programs." However, another commenter stated that they are "wholly supportive" of Evaluation Criterion One because it "gives priority recognition to hospitals reliant on Medicare funding, and where beneficiaries will benefit most from an increase in residency slots." Commenters also asked that CMS consider determining the 60 percent share by calculating Medicare inpatients as a share of Medicare and privately insured patients, or Medicare patients plus Medicaid patients plus uninsured patients as a share of total patients. The commenter believed that teaching hospitals that treat a significant number of Medicaid and uninsured patients should not be put at a disadvantage under this criterion. The commenter also requested that CMS accept *submitted* cost reports (and not just settled cost reports) for this evaluation criterion, due to the time lag in settling cost reports. Lastly, commenters asked that CMS clarify that Medicare Advantage patients may be counted toward a hospital's Medicare inpatient utilization for purposes of this evaluation criterion.

Response: We proposed and finalized a similar Evaluation Criterion under section 422 of the MMA and received similar comments (we refer readers to 69 FR 49150, August 11, 2004). We continue to believe, as we did then, that an Evaluation Criterion geared to hospitals, urban or rural, that treat a disproportionately high percentage of Medicare patients is appropriate because Medicare beneficiaries at these hospitals will benefit greatly from the presence of a residency program, and further, these hospitals are typically reliant on Medicare funding. Therefore, we are not reducing the number of points allotted to this Criterion from 5 to 1. We also proposed that the determination of whether a hospital qualifies for this criterion should be made based on at least two of the hospital's last three most recent audited cost reporting periods for which there is a settled cost report because this condition is modeled after the Medicare Dependent Hospital regulations at § 412.108. We continue to believe that the 60 percent threshold is appropriate for purposes of establishing priorities under section 5503, based on most recently audited and settled cost reports. Therefore, we are not adopting the commenters' suggestion to lower the percentage threshold, or that we accept as-submitted cost reports. Further, we do not believe it is appropriate to include non-Medicare, Medicaid, or private payer utilization for purposes of Evaluation Criterion One. This would

not be consistent with longstanding regulations regarding the computation of Medicare utilization, be it for Medicare GME purposes or otherwise. Finally, we are clarifying that in determining whether a hospital qualifies under this Evaluation Criterion One, the hospital's Medicare Advantage patient load may be incorporated into the Part A patient load (in at least two of the hospital's last three most recent audited cost reporting periods for which there is a settled cost report) to determine whether the hospital has a Medicare inpatient utilization of over 60 percent. The hospital may document its Medicare Advantage (MA) patient days for the respective cost reports in the areas of the hospital subject to the IPPS, the IPF PPS (for psychiatric distinct part units), and the IRF PPS (for rehabilitation distinct part units) using data from the Provider Statistical & Reimbursement (PS&R) Report, report type 118.

Comment: One commenter stated that they "appreciate[s] CMS' careful construction of evaluation criteria for determining increases in FTE resident caps," but proposed that CMS consider including language referencing the Health Resources and Services Administration's (HRSA) Teaching Health Center (THC) program and the recently-awarded Primary Care Residency Expansion (PCRE) grants in the discussion of Evaluation Criteria Three and Four, which both relate to new or expanded primary care residency programs. The commenter believed that the inclusion of THC residencies in the CMS criteria and the possibility of receiving additional cap slots would encourage hospitals to participate in the formation and operation of these programs. The commenter also suggested that hospitals associated with HRSA's PCRE grants, which award 5-year grants to cover stipends of primary care residency programs to encourage hospitals to increase their number of primary care trainees, should be eligible for increases in their FTE resident caps. The commenter noted that these hospitals are not allowed to claim Medicare GME payments for the new residents until after the grant ends.

Response: While the THC program, the PCRE grants, and section 5503 are all intended to try to increase the number of primary care physicians training in community non-hospital settings, we are unsure whether it is necessary to link all three provisions for purposes of awarding slots under section 5503. Presumably under the THC program, the residents will be spending the majority of their training time in the THC, which is a non-hospital site and, therefore, is not subject to FTE resident cap rules. We further presume that the THC would be incurring the costs of the residents' salaries and fringe benefits for the time spent training at the THC. We are not convinced that a hospital should receive points merely because it will be associated with a program occurring at a THC. With regard to the PCRE grants, if, as the commenter stated, a hospital receiving that grant cannot claim Medicare GME payments anyway until the grant ends, we do not see how such a hospital would benefit from the receipt of additional slots under section 5503, which are funded by Medicare, unless those slots would be used for some other primary care program not associated with the grants. After considering the public comment, we believe it would be overly complicated, and possibly not even necessary, to incorporate into the Evaluation Criteria a preference for a hospital that is associated with the THC program and/or the PCRE grants. We believe that if the goal is to increase the number of primary care residents, the proposed Evaluation Criteria already clearly give preference to hospitals requesting slots for use in primary care programs.

Comment: One commenter stated that Evaluation Criterion Two should be expanded. Although supportive of incentives for geriatrics training, this commenter stated that geriatrics is only a limited subspecialty of primary care similar to gastroenterology, sports medicine, or adolescent medicine.

Response: We believe it is appropriate to have an Evaluation Criterion that focuses exclusively on geriatrics because not only is geriatrics a specialty that directly affects Medicare beneficiaries, but, unlike gastroenterology, sports medicine, or other subspecialties of primary care programs, it is specifically defined in the statute as being "primary care" (we refer readers to the definition of "primary care resident" at section 1886(h)(5)(H) of the Act). Therefore, we are not adopting the commenter's suggestion.

Comment: A commenter stated that the intent behind Evaluation Criterion Three is excellent, "but it has no teeth." The commenter suggested that for programs such as internal medicine, with a primary care track, the more important criterion is what the output of primary care physicians has been in recent years, and whether the new slots would, in fact, be used for the primary care track positions. The commenter recommended that CMS require applicants to include a review of recent graduates of the program, including information regarding what type of practice the graduates are involved in 2 years following graduation from this program. Further, the commenter suggested that if CMS sets a threshold of 50 percent for the percentage of graduates practicing only primary care within 2 years after graduation to attain these points, it would capture programs that are actually producing more primary care physicians. The commenter asserted that the same logic could be applied to Evaluation Criterion Four.

Also related to Evaluation Criterion Three, this commenter requested that CMS clarify whether family medicine would be included in this criterion. Lastly, the commenter recommended that if a program wishes to expand its number of family medicine residents, or establish a new program in family medicine, it should get at least an additional point for Evaluation Criteria Three and Four, because "unlike other primary care programs, the vast majority of family medicine graduates will be serving as primary care physicians upon graduation into practice."

Response: We believe that implicit in Evaluation Criterion Three, which is targeted to primary care programs with a "*demonstrated* focus" on residents who pursue careers in primary care is the assumption that applicant hospitals that wish to receive the 3 points under Evaluation Criterion Three must "demonstrate" that residents graduating from their programs actually do practice in primary care, and do not enroll in nonprimary care subspecialty programs or work as something other than a primary care practitioner. The commenter's recommendation that applicants include a review of recent graduates of the program, including information regarding what type of practice the graduates are involved in 2 years following graduation from this program, is a reasonable method for documenting that focus. For example, hospitals applying for consideration under Evaluation Criterion Three could provide documentation regarding residents who completed the primary care program in question in June 2008, and in what capacity those graduates have been practicing, at least through June 2010. The commenter suggested that CMS set a threshold of 50 percent for the percentage of graduates practicing only primary care within 2 years after graduation to "demonstrate" that their program focuses on residents who wish to pursue careers in primary care. We believe that a threshold of *greater than* 50 percent would be acceptable as a basis to demonstrate that

a program produces physicians who pursue careers in primary care. We are choosing more than 50 percent as the threshold because this is consistent with the Evaluation Criterion added in this final rule for hospitals that request additional slots for an existing program(s) for which the hospital can demonstrate that more than 50 percent of residents completing the program(s) go on to practice in a rural area or a Primary Care HPSA.

While Evaluation Criterion Three does focus on outcomes, which as explained in the previous paragraph, applicant hospitals must demonstrate, we do not think it is necessary that Evaluation Criterion Four also focus on outcomes. Considering that section 1886(h)(8)(B)(ii) of the Act, as added by section 5503(a)(4) of the Affordable Care Act, already establishes its own rules for a 5 year probationary period and establishes a primary care threshold for which a hospital that receives slots cannot fall below, we are not adopting the commenter's recommendation that applicants applying for the 5 points under Evaluation Criterion Four also be required to demonstrate the practice outcomes of its graduates.

In response to the commenter's request, we are clarifying that slots requested for use in a family practice program may fall under Evaluation Criterion Three. As we stated in the proposed rule (75 FR 46407), Evaluation Criterion Three is for primary care programs with a demonstrated focus on training residents to pursue careers in primary care, and family medicine is a primary care program. Internal medicine programs with primary care tracks are just one type of several primary care programs that may qualify for 3 points under Evaluation Criterion Three. Further, as we explained on page 46408 of the proposed rule, a hospital may qualify for multiple points for the same program. For example, it is possible for a primary care program to qualify for 3 points under Evaluation Criterion Three and for 5 points under Evaluation Criterion Four. However, contrary to the commenter's last request, we do not think it is necessary to provide an extra point for family medicine programs that qualify under Evaluation Criteria Three or Four, simply because most graduates of family medicine programs practice as primary care physicians. While that is a laudable goal, we believe that each primary care specialty, family practice or otherwise, from which the graduates dedicate themselves to pursue careers in primary care, deserves an equal amount of points.

Comment: One commenter expressed that the presence of a primary care track for an internal medicine residency does not justify any additional weighting of an application from such a residency over another internal medicine residency without such a track. The commenter explained that many internal medicine residency programs are entirely focused on primary care training and subsequently do not need a separately labeled primary care track while other programs do not want the burden of managing two tracks for the training program and have dissolved the administrative listing of a track but not the educational experiences in the program. The commenter requested that if CMS does not eliminate this preference, then it should allow non-track programs the opportunity to demonstrate equivalency.

Response: We believe the commenter has misunderstood the proposed Evaluation Criterion Three, which already *allows* "non-track" programs to demonstrate equivalency. The proposed Evaluation Criterion Three states, "*The hospital will use additional slots to establish a new or expand an existing primary care program with a demonstrated focus on training residents to pursue careers in primary care, rather than in nonprimary subspecialties of those primary care programs (for example, the hospital has an internal medicine program with a designated primary care track).*" Therefore, the proposed Evaluation Criterion Three allows any primary care program to demonstrate a focus on training residents to pursue careers in primary care, rather than in nonprimary care subspecialties of primary care programs. We also stated on page 46407 of the August 3, 2010 proposed rule that this Evaluation Criterion applies to any primary care specialty. Internal medicine programs with primary care tracks were provided as just one example of primary care programs that may be able to demonstrate a focus on training residents to pursue careers in primary care. Thus, as the commenter requested, we already intended to allow "non-track" internal medicine or other primary care programs to demonstrate equivalency.

Comment: One commenter suggested that the proposed evaluation criteria together with the proposed prioritization framework could result in few or no residency slots being awarded to general surgery residencies. Though the commenter noted that they do not believe CMS intended to exclude general surgery residency programs from the redistribution, the commenter expressed concern that there is a formulaic bias in the proposed rule as a whole that could produce this result. The commenter urged CMS to re-examine these criteria and the proposed priority categorization schema or otherwise find a means to ensure that general surgery residency programs seeking additional slots will have a reasonable opportunity of securing them. Moreover, the commenter noted that general surgery programs would be able to demonstrate the likelihood of filling additional positions because these programs have a track record of attracting candidates and filling positions.

Response: We are unsure why the commenter believes that few or no slots will be awarded to general surgery residencies. Section 1886(h)(8)(B)(ii)(II) of the Act specifically requires that a hospital must ensure that at least 75 percent of the slots it receives are used to train primary care or general surgery residents. Some hospitals may choose to use their slots for a combination of primary care or general surgery residents, while others may choose to use 75 percent of their slots for only one or the other. Further, we have included Evaluation Criterion Four, which awards 5 points to applicants that will use all the additional slots for a primary care or a general surgery program(s).

Comment: One commenter urged CMS to assign an increased point value for Evaluation Criterion Five. The commenter cited the 2009 National Healthcare Disparities Report, issued by the Agency for Healthcare Research and Quality that showed a lack of significant progress in addressing health care disparities. This commenter believes that primary care plays a large role in working to eliminate health care disparities and thus more emphasis should be placed on primary care HPSAs.

Response: We agree that it is important to address the health care disparities in Primary Care HPSAs and underserved areas. In response to an earlier comment, we stated that we are adding an additional Evaluation Criterion for hospitals that request additional slots for an existing program(s) for which the hospital can demonstrate that more than 50 percent of residents completing the program(s) go on to practice in a rural area or a Primary Care HPSA. Therefore, rather than increase the point value under existing Evaluation Criterion Five, we are adding a new Evaluation Criterion to address the health care disparities in underserved areas.

Comment: One commenter observed that a hospital could potentially "work the system" of points because there is no requirement on how many additional slots would be necessary in order to be

considered an expanded program under Evaluation Criterion Two for geriatrics. The commenter argued that the same logic also applies to Evaluation Criterion Three. Therefore, the commenter suggested that a varying amount of points be assigned based on the number of geriatrics or primary care residents that are to be added under Evaluation Criteria Two and Three, respectively.

Response: The commenter is correct that a hospital may request as little as one FTE slot for use in a geriatrics program (using Evaluation Criterion Two as an example), and simply because that slot is for geriatrics, the hospital will receive 5 points for that request. However, we note that the points are allocated by program and, therefore, an applicant cannot use the points awarded in response to a request for slots for use in a geriatrics program to gain an advantage in its request for slots for use in another type of program. The points awarded for geriatrics would only benefit the hospital in its request for slots to be used in a geriatrics program. Similarly, the points awarded under Evaluation Criterion Three would only benefit the hospital for that request.

Comment: One commenter stated that the proposed system of selecting States for priority status in the redistribution is flawed and that it would ultimately only benefit the "ultra large training institutions." The commenter noted that these institutions only average 9 percent of their training in primary care. Moreover, the commenter stated that "the large to ultra large hospitals received 82 percent of all FTEs redistributed to these areas in the 2003 redistribution." The commenter further stated that the proposed requirement that 75 percent of the slots are to be used for primary care will also not be met. The commenter asserted that large institutions that train only 9 percent of their residents in primary care "will gladly keep these slots in primary care for 5 years and then they will convert them to sub-specialty programs." Therefore, a redistribution of FTEs to these hospitals would not meet the goal of primary care growth. This commenter suggested that rewarding hospitals that already have a track record of supporting primary care would be a better mechanism for redistribution. Specifically, the commenter proposed that a descending list of ratios of primary care residents to other residents at each hospital would be a simple way to measure a hospital's level of support for primary care residents. The commenter suggested that any available slots should be awarded across the country to hospitals based upon this descending percentage list, allowing every teaching hospital the chance to receive new FTE slots based upon their past performance.

Response: As the commenter is aware, the method for selecting States for priority status to receive slots is prescribed under section 5503 and, therefore, the Secretary has little, if any, discretion to alter it. Although we certainly cannot predict with great accuracy which hospitals will apply for and receive slots under section 5503, we disagree with the commenter that the redistribution criteria will benefit the "ultra large teaching institutions" who, according to the commenter, only train about 9 percent of their residents in primary care. We note that under section 1886(h)(8)(D) of the Act, which prescribes the priority that should be given to certain areas (that is, to hospitals located in States that are in the lowest quartile for resident-to-population ratios, to hospitals located in a State that is among the top 10 States for primary care HPSA to population ratios, or hospitals located in rural areas), these States generally have teaching hospitals that are relatively small and moderate in size, and the preference categories do not include States located in the Northeast, which contains the country's highest concentration of residents and large teaching institutions. However, we do agree with the commenter that hospitals that already have a track record of training residents in primary care should be recognized in the redistribution process. We believe that Evaluation Criterion Three serves this purpose, under which hospitals that are requesting slots for a primary care program with a demonstrated focus on training residents to pursue careers in primary care may receive 3 points on their application requesting additional slots.

Comment: One commenter disagreed with the First Level Priority Category requirement that a hospital must be located in a rural area and stated that many rural hospitals do not have the infrastructure to support GME. This commenter suggested that placement of a hospital's graduates in rural areas or HPSAs or in practices that serve an underserved population, such as Federally Qualified Health Centers, Medically Underserved Areas, or Medically Underserved Populations, would be a more logical requirement. This same commenter also requested that "integrated rural training tracks" be considered for Second Level Priority Category. The commenter noted that this term is included in the statute, but has not yet been defined by CMS. The commenter proposed that a program with a minimum of 3 months required rural training (integrated in any time frame in its curriculum) should be eligible to be considered an accredited training program with an integrated track. The commenter also reiterated that CMS should consider the resident placement outcomes of a hospital more than its physical location.

Response: Section 1886(h)(8)(D)(iii) of the Act specifically states that hospitals located in rural areas receive preference for receiving redistributed slots. Therefore, the Secretary does not have the flexibility to divert those slots to hospitals in urban areas or to hospitals that generally serve "underserved" populations that are not located in a State that falls within the top 10 States for Primary Care HPSA to population ratios. Similarly, the statute specifically states that the Secretary shall take into account hospitals that have an "accredited rural training track," not an "integrated rural training track." Furthermore, as we know from the ACGME, there is no defined category of programs called "integrated rural training tracks" and therefore, we cannot give special recognition under the priority categories to hospitals that operate integrated rural training tracks. However, the commenter raises a legitimate policy consideration with regard to the suggestion that CMS should consider resident placement outcomes more so than the hospital's physical location. Although we cannot create new priority categories, we do have the flexibility to create additional Evaluation Criteria for use in distinguishing among applicant hospitals within each priority category. Therefore, in this final rule, we are adding an additional Evaluation Criterion for hospitals that request additional slots for an existing program(s) for which the hospital can demonstrate that more than 50 percent of residents completing the program(s) go on to practice in a rural area or a Primary Care HPSA.

Comment: One commenter stated that in addition to the proposed categories of hospitals that would be awarded points in applying for additional slots, CMS should create several additional categories for which hospitals could receive points in the application process as well. The commenter suggested the following additional Evaluation Criteria: (1) Hospitals that exceed their caps—hospitals that have undertaken to train physicians without any financial support from Medicare because it is their "mission obligation" to do so deserve recognition, and CMS should

consider "giving even more weight to those hospitals that are significantly over their resident caps compared to other hospitals that are over their caps"; (2) Hospitals that are in the process of building programs and would lose slots during the build-up period—This would protect hospitals that have made the investment of time and resources to receive accreditation for a new program, and appear to have unused slots but actually are in the middle of a several year build-up process; (3) Hospitals that lose slots for "purely technical reasons"—One example would be hospitals whose "highest" resident count during the three most recent cost reports ending on or before March 23, 2010, did not occur in the year with the smallest difference between its cap and its count and, therefore, would lose slots under CMS' proposed interpretation of the statute.

Response: As we have stated in response to previous comments, and discuss in greater detail below, we believe the intent of section 5503 is to increase the number of primary care or general surgery physicians and, therefore, the provision provides funding for new or expanded programs in primary care and general surgery, rather than funding for existing positions. Therefore, we are not adopting the commenter's request to add an Evaluation Criterion for hospitals that are exceeding their FTE resident caps. With regard to the second request, since we are exempting new teaching hospitals that do not have their FTE resident caps established in all three of their reference cost reports from cap reductions, the commenter's request to add an Evaluation Criterion to protect these new teaching hospitals is no longer necessary. Finally, in response to the commenter's third request, we decline to accept the recommendation to add Evaluation Criteria to protect hospitals that lose slots for "purely technical" reasons, as this is a difficult category to define and limit.

Comment: One commenter noted that CMS has little discretion in developing regulations given how prescriptive the statutory language is, but that does not change the reality of the need for more residency trained and board-certified emergency physicians in rural America. The commenter asked that the redistribution criteria be modified to allow new or expanding emergency medicine programs in the designated shortage States to qualify. Moreover, this same commenter noted that current ACGME residency accreditation requirements cannot be met by a total rural residency experience so these programs cannot be established exclusively in rural hospitals. Nonetheless, the commenter asked CMS to change its regulations to allow teaching hospital payment when emergency medicine residents rotate through rural hospitals.

Response: It appears that the commenter is making two separate requests; first, that some special consideration be given in redistributing slots to hospitals that are located in "designated shortage areas" and are training emergency medicine residents, and second, that CMS should change its regulations to allow a hospital that operates an emergency medicine residency program, and sends those residents to a rural hospital for some rotations, to continue to count in its direct GME and IME FTE counts the training time spent at the rural hospital. With regard to the first request, similar to the Evaluation Criterion for emergency medicine we included for the purpose of implementing section 422 of the MMA, we agree it is worthwhile to include an Evaluation Criterion regarding emergency medicine programs under section 5503 as well. Specifically, we are adding the following to this final rule: *Evaluation Criterion Eight. The hospital is requesting slots to expand an existing emergency medicine program in which the residents train in Primary Care HPSAs.* (1 Point)

To answer the second request, the prohibition against one hospital claiming the time at another hospital is based in the statute and cannot be changed without legislation. We have explained this policy numerous times in previous **Federal Register** notices (we refer readers to 67 FR 50077, August 1, 2002). This law is implemented in the regulations at section 413.78(b), which states, "A hospital cannot claim the time spent by residents training at another hospital."

Comment: One commenter expressed support for the residency slot redistributions under section 5503, but also asked that CMS reconsider the definition of primary care as it relates to section 5503. This commenter asked CMS to include adult psychiatry in the definition of primary care. This commenter noted that depression is the fourth leading cause of disability world-wide and mental illness and addictions together are the second leading cause of disability and premature mortality in the United States. Moreover, the commenter stated that national studies also suggest that two-thirds of primary care physicians report being unable to obtain outpatient mental health services for patients. The commenter also asserted that a comprehensive primary care Home Health Model will include mental health and psychiatry.

Similarly, one commenter strongly encouraged CMS to count combined residencies in internal medicine-pediatrics among the primary care residency programs eligible for additional slots under the redistribution effort. The commenter explained that internal medicine-pediatrics residencies are combined 4-year training programs in which residents experience the array of training opportunities open to residents in internal medicine and pediatrics separately. The commenter noted that Congress has treated internal medicine-pediatrics residencies unevenly over the years, including recognition as primary care residency programs in one section of the Affordable Care Act (ACA) while overlooking these residencies as primary care training experiences in other sections of the same law. Further, the commenter believed CMS has the authority to include these combined programs for these regulations.

Response: The definition of "primary care resident" is found in the statute at section 1886(h)(5)(H) of the Act, and psychiatry is not one of the specialties defined as primary care. While we acknowledge the existing shortage in the provision of mental health services, the Secretary does not have the authority to include psychiatry in the definition of primary care without a change in the law. To respond to the second commenter that requested that combined internal medicine-pediatrics programs be recognized as primary care programs eligible for slots under section 5503, we note that these programs are already considered to be primary care under section 1886(h)(5)(H) of the Act. We believe that the commenter's confusion regarding CMS's treatment of combined internal medicine-pediatrics programs may stem from the fact that the ACGME does not specifically accredit residency programs in the combined format. The ACGME separately accredits internal medicine programs and pediatrics programs. However, the ABMS recognizes combined programs, and provides board certification in both internal medicine and pediatrics for residents who train in combined internal medicine-pediatrics programs. Because both internal medicine and pediatrics programs meet the definition of primary care at section 1886(h)(5)(H) of the Act, we agree that combined internal medicine-pediatrics programs also meet the definition of primary care programs. Thus, hospitals applying for slots under section 5503 to start or expand combined internal medicine-pediatrics programs might

qualify to receive points under Evaluation Criteria Three and Four.

After consideration of the public comments we received, we are finalizing our proposed six Evaluation Criteria, and we also are adding two more Evaluation Criteria in this final rule. We are also clarifying that, because of the 75-percent threshold, a hospital cannot apply for slots under section 5503 only for a non-primary care program (other than general surgery). However, a hospital could apply for slots, and demonstrate that it needs 75 percent of those slots to start or expand a particular primary care (or general surgery) program, and that it needs 25 percent of those slots for use in a particular non-primary care program. However, the hospital's request for each program will be evaluated separately.

15. Exception If Positions Are Not Redistributed by July 1, 2011

Section 1886(h)(8)(E)(ii) of the Act states that in the case where, by July 1, 2011, the Secretary "does not distribute positions to hospitals," the Secretary shall distribute such positions to other hospitals in accordance with the considerations in redistribution specified at section 1886(h)(8)(C) of the Act (that is, the demonstrated likelihood of filling the slots and whether the hospital has a rural training track), and the priority for certain areas specified at section 1886(h)(8)(D) of the Act (that is, whether the hospital is located in a State with a resident-to-population ratio in the lowest quartile, whether the hospital is located in a State that is in top 10 States in terms of Primary Care HPSA population to State population, and whether the hospital is rural). We believe that the phrase "does not distribute positions to hospitals" contemplates the scenario where there would be more slots available than the amount that qualifying hospitals requested, and therefore, CMS would be left with slots in the distribution pool as of July 1, 2011. The Secretary is directed to initiate another round of applications after July 1, 2011, in which hospitals that could demonstrate that they could use the slots would apply and possibly receive a portion of the remaining slots, until all the slots in the pool are redistributed. Should the situation arise where there are unused slots available as of July 1, 2011, we would propose a process for redistributing those slots "in accordance with the considerations described in subparagraph (C) and the priority described in subparagraph (D)." We would then notify the public to establish the application timeframe, criteria, process and other relevant information at that time.

Comment: Several commenters addressed additional items for consideration if all of the available caps are not redistributed by July 1, 2011, using the criteria under section 5503. One commenter stated that these leftover caps should be distributed to hospitals that are currently exceeding their caps. Another commenter recommended that the Secretary broaden the redistribution criteria to ensure that all slots are filled and utilized while emphasizing the considerations made by section 5503. This commenter urged CMS to consider using a hospital's post-residency placement of residents in rural areas, and not necessarily require a certified rural training track within that hospital's GME program. This commenter also requested that the criteria listed in section 5503 be used only as guidance rather than as prescriptive criteria in the event all available caps are not distributed by July 1, 2011. This commenter also recommended that CMS use applications from the first round of redistribution and fill those slots first before proposing additional rules.

Another commenter suggested that, should slots remain in the distribution pool after the first round of applications has been processed, CMS continue down the lists of States with low resident-to-population ratios and high HPSA populations, allowing hospitals in the next several States on each list to apply for slots in a second round of applications. This commenter further stated that should a second application process occur, it should not be identical in all ways to the first round because hospitals that were unable to accommodate additional residents in the first round would not be significantly more likely to meet the same requirements in under a year from now. Additionally, another commenter suggested that if there are more slots than the anticipated demand, hospitals that do not fit into the prescribed categories should be able to apply for the additional slots.

Response: As we explained in the proposed rule (75 FR 46410), should the situation arise where there are unused slots available as of July 1, 2010, we would propose a process for redistributing those slots "in accordance with the considerations described in subparagraph (C) and the priority described in subparagraph (D)." We would then notify the public to establish the application timeframe, criteria, process and other relevant information at that time. We appreciate the commenters' suggestions and will keep them in mind should the need arise to propose a second round for redistribution of unused slots.

16. Application of Direct GME PRAs for Primary Care and Nonprimary Care Residents and Conforming Changes for the IME Multiplier

Section 1886(h)(8)(G) of the Act states that, "With respect to additional residency positions in a hospital attributable to the increase provided under this paragraph, the approved FTE per resident amounts are deemed to be equal to the hospital per resident amounts for primary care and nonprimary care computed under paragraph (2)(D) for that hospital." Hospitals that receive increases in their FTE resident caps under section 1886(h)(8)(B)(i) of the Act will receive direct GME payments associated with those FTE residents in the same manner as they receive direct GME payments for their other (non-section 422) FTE residents, that is, using the primary care PRA that is reported on Worksheet E–3, Part IV, line 3.23, and the nonprimary care PRA reported on line 3.17 of the same worksheet. This provision in section 5503 differs from section 422 in that hospitals that received additional slots under section 422 receive direct GME payment for FTE residents attributable to those slots using a single locality-adjusted national average PRA (42 CFR 413.77(g)), and the payment determination is made on Worksheet E–3, Part VI. Thus, if a hospital received additional slots under section 422, and they train a number of residents that is sufficient to require them to count FTE residents under those slots, the hospital will continue to receive direct GME payment for those slots using the locality-adjusted national average PRA. However, in the August 3, 2010 proposed rule (75 FR 46410), we proposed that a hospital that receives additional slots under section 5503 would be paid for FTE residents counted under those slots using the same primary care and nonprimary PRAs for which payment is made for FTE residents subject to the 1996 FTE cap. We indicated that we are expecting to revise Worksheet E–3, Part IV to add a line on which hospitals would report the number of FTEs by which the hospital's FTE caps were increased for direct GME slots received under section 5503. (We note that on the new Medicare cost reporting form, CMS–2552–10, the direct GME worksheet is E–4). To create a hospital's total adjusted direct GME FTE cap, the increase granted under section 1886(h)(8)(B)(i) of the Act would be added to the 1996 direct GME FTE cap and would include any applicable new

program adjustment received under § 413.79(e), and any applicable adjustments for the cost reporting period due to a Medicare GME affiliation agreement. In a given cost reporting year, we proposed that a hospital would only count FTE residents under its direct GME section 422 cap slots on Worksheet E–3, Part VI if the number of unweighted allopathic and osteopathic residents it is training exceeds the total adjusted direct GME cap (including the section 5503 slots) on Worksheet E–3, Part IV.

In addition, with respect to the IME adjustment, in the August 3, 2010 proposed rule (75 FR 46410), we proposed that a hospital that receives an increase in its FTE cap under section 1886(h)(8)(B)(i) of the Act will count FTE residents under those slots, and payment will be made with respect to residents counted under those slots, using the same IME multiplier for which payment is made for FTE residents subject to the 1996 FTE cap (that is, currently a multiplier of 1.35). This is because section 1886(d)(5)(B)(x) of the Act, as added by section 5503(b)(2), states, "For discharges occurring on or after July 1, 2011, insofar as an additional payment amount under this subparagraph is attributable to resident positions distributed to a hospital under subsection (h)(8)(B), the indirect teaching adjustment factor shall be computed in the same manner as provided under clause (ii) with respect to such resident positions." This provision in section 5503 differs from section 422 in that hospitals that received additional slots under section 422 receive IME payment for FTE residents counted under those slots using a special multiplier of 0.66 (42 CFR 412.105(e)(2)), and the payment determination is made on Worksheet E–3, Part VI. We also indicated that we are expecting to revise Worksheet E, Part A to add a line in which applicable hospitals would report the amount of additional IME slots received under section 5503. To create a hospital's total adjusted IME FTE cap, this additional amount would be added to the 1996 IME FTE cap, any applicable new program adjustment received under § 413.79(e), and any applicable adjustments for the period due to a Medicare GME affiliation agreement. In a given cost reporting year, we proposed that a hospital would only use its IME section 422 cap slots on Worksheet E–3, Part VI if the number of unweighted allopathic and osteopathic residents it is training exceeds the total adjusted IME cap (including the section 5503 slots) on Worksheet E, Part A. Finally, under section 422 of Public Law 108–173, hospitals that were members of the same Medicare GME affiliated group on or after July 1, 2005, and that received additional FTE cap slots under section 422 are precluded from including those additional section 422 slots in the aggregate affiliated cap. This is in part because section 422 specified that a hospital would receive direct GME and IME payments for additional slots awarded under section 422 with rates that were different from the non-section 422 cap slots, and tracking the different direct GME and IME payment rates associated with FTE residents that are counted as a result of the section 422 cap increases and those that were not would be extremely difficult for the Medicare contractors. In addition, in order to qualify for additional slots under section 422, the hospitals had to document a need for those slots. Similarly, under section 5503, we proposed that hospitals that receive additional slots under section 5503 *cannot* use these slots as part of the aggregate cap in a Medicare GME affiliation agreement. This is because we believe that once a hospital has demonstrated that it truly needs the additional slots, has made the effort to carefully document that it will fill those slots within 3 years, and once we have determined that the characteristics of the hospital and its training program warrant an increase in the hospital's FTE resident caps under section 1886(h)(8)(B)(i) of the Act, we do not believe it would be appropriate for the hospital to transfer those positions to another hospital, albeit temporarily, under the terms of a Medicare GME affiliation agreement. To do so would be to undermine the goals and specifications for the redistribution of residency positions as set forth under section 5503 of the Affordable Care Act.

We note that section 1886(h)(8)(B) of the Act, which addresses the increases in hospitals' FTE resident caps, makes no reference to section 1886(h)(4)(G) or 1886(d)(5)(B)(vi)(II) of the Act, which are the provisions concerning the rolling average count of FTE residents. Furthermore, there is no mention of section 1886(d)(5)(B)(vi)(I) of the Act, the provision regarding the cap on the IME resident-to-bed ratio, in section 1886(h)(8)(B) of the Act either. That is, the statute does not provide for an exclusion from application of the rolling average for residents counted as a result of FTE cap increases under section 1886(h)(8)(B)(i) of the Act, nor does the statute exempt the residents counted pursuant to FTE cap increases under section 1886(h)(8)(B)(i) from the application of the cap on the IME resident-to-bed ratio. In light of the absence of a specific directive in section 1886(h)(8)(B)(i) of the Act exempting those residents from application of the rolling average for direct GME and IME, and the cap on the IME resident-to-bed ratio, and with no apparent reason to treat residents counted as a result of the FTE cap increases under section 1886(h)(8)(B) of the Act differently, in the August 3, 2010 proposed rule (75 FR 46411), we proposed to require that if a hospital increases its direct GME or IME FTE count of residents under an increase in the hospital's FTE resident cap under section 1886(h)(8)(B)(i) of the Act, those FTE residents would be immediately subject to the rolling average calculation and the cap on the IME resident-to-bed ratio. Furthermore, we believe that, given potentially significant shifts of FTE resident positions among hospitals as a result of section 1886(h)(8) of the Act, the inclusion of FTE residents counted as a result of FTE cap increases under section 1886(h)(8)(B)(i) of the Act in the rolling average would introduce a measure of stability and predictability, and mitigate radical shifts in GME payments from period to period.

Comment: Commenters expressed support of the treatment of hospitals with caps that have been reduced or increased under section 422 of the MMA. However, one commenter suggested that payment levels should either be the same for all FTE cap types or that each of the three should have its own payment level to perhaps provide additional incentives for training primary care residents.

Response: Both section 422 of the MMA and section 5503 of the Affordable Care Act specify clearly which direct GME and IME payment rates are to be used.

Comment: One commenter agreed with CMS' proposal that if a hospital receives slots under 5503, and also received slots under section 422, only FTE residents in excess of the hospital's 1996 cap, as increased by the new section 5503 slots, would be paid at the section 422 payment rates (the locality-adjusted national average PRA for direct GME, and the 2.7 percent multiplier for IME).

Response: We are finalizing our proposal that only FTE residents in excess of a hospital's 1996 FTE cap, as increased by the section 5503 slots, would be paid at the section 422 rates (the locality-adjusted national average PRA for direct GME, and the 2.7 percent multiplier for IME).

Comment: Commenters disagreed with CMS' proposal to include FTE

residents added to a hospital under section 5503 in the hospital's rolling average count for IME and direct GME, and in the cap on the IRB ratio for IME. The commenters acknowledged that section 5503 is silent on this matter, but argued that the absence of language to exclude redistributed FTEs from the rolling average and IRB ratio cap need not compel CMS to include redistributed FTEs in the rolling average and IRB ratio cap. The commenters noted that CMS has used its authority in the past to create exceptions to the rolling average and IRB ratio cap when the application of these provisions would "create an unfair result" (for example, to exclude residents displaced by the closure of a hospital or residency program from a receiving hospital's rolling average or IRB ratio cap). The commenters argued that "it makes little sense" to apply the rolling average and IRB ratio cap here as well. The commenters believed that the fact that Congress wanted redistributed resident slots to be used to meet specific policy goals for a 5-year period demonstrates that Congress did not intend the usual FTE counting rules to apply to redistributed FTE slots.

Another commenter agreed with CMS' proposal to include residents added under section 5503 in the rolling average and the IME IRB ratio cap. The commenter believed that the inclusion of these FTE residents in the rolling average and IME IRB ratio cap would "introduce a level of stability in the aggregate GME payments."

Response: Regarding the applicability of the rolling average and the IRB ratio cap to redistributed slots under section 5503, we explained in the August 3, 2010 proposed rule (75 FR 46411) that, "In light of the absence of a specific directive in section 1886(h)(8)(B)(i) of the Act exempting those residents from application of the rolling average for direct GME and IME, and the cap on the IME resident-to-bed ratio, and with no apparent reason to treat residents counted as a result of the FTE cap increases under section 1886(h)(8)(B) of the Act differently, we are proposing to require that if a hospital increases its direct GME or IME FTE count of residents under an increase in the hospital's FTE resident cap under section 1886(h)(8)(B)(i) of the Act, those FTE residents would be immediately subject to the rolling average calculation and the cap on the IME resident-to-bed ratio. Furthermore, we believe that, given potentially significant shifts of FTE resident positions among hospitals as a result of section 1886(h)(8) of the Act, the inclusion of FTE residents counted as a result of FTE cap increases under section 1886(h)(8)(B)(i) of the Act in the rolling average would introduce a measure of stability and predictability, and mitigate radical shifts in GME payments from period to period." We continue to believe that it is appropriate to include these FTE slots in the rolling average and in the IRB ratio cap. In the instance of displaced residents that result from the closure of a hospital or a residency program, an exemption was provided under sections 413.79(h) for direct GME and 412.105(b) for IME regarding the rolling average and the IRB ratio cap respectively so as to provide an incentive for hospitals that may have experienced some financial loss when accepting actual residents, not merely FTEs, into their hospitals and programs who may otherwise not have been able to complete their training. Such an exception is not warranted under section 5503, where hospitals are only applying for FTE slots to either start new programs or expand existing programs. We also appreciate the support of the commenter that wrote that the inclusion of these FTE residents in the rolling average and IME IRB ratio cap would "introduce a level of stability in the aggregate GME payments." We are finalizing our proposal to include FTE slots added under section 5503 in the rolling average and IRB ratio cap accordingly.

Comment: A commenter thought that CMS should permit hospitals to use slots awarded under section 5503 as part of Medicare GME affiliation agreements after a certain period of time, such as 5 years, coinciding with the end of the time period of other restrictions applicable to slots awarded under section 5503. The commenter understood CMS' rationale for proposing to require that hospitals not include slots received as part of Medicare GME affiliation agreements, but the commenter believed that keeping separate track of these FTEs is administratively burdensome, and that circumstances can change over time. Similarly, commenters expressed concern that redistributed positions could not be aggregated under a Medicare GME affiliation agreement. Commenters stated that this limitation seems contradictory in that it allows these affiliated programs to lose slots, but not gain them when they meet the redistribution criteria. Moreover, commenters thought that this policy restricts collaborative training arrangements, which are particularly important for resident training in rural and underserved areas.

Response: In the August 3, 2010 proposed rule (75 FR 46410), we proposed that hospitals that receive additional slots under section 5503 *cannot* use these slots as part of the aggregate cap in a Medicare GME affiliation agreement. This is because we believe that once a hospital has demonstrated that it truly needs the additional slots, has made the effort to carefully document that it will fill those slots within 3 years, and once we have determined that the characteristics of the hospital and its training program warrant an increase in the hospital's FTE resident caps under section 1886(h)(8)(B)(i) of the Act, we do not believe it would be appropriate for the hospital to transfer those positions to another hospital, albeit temporarily, under the terms of a Medicare GME affiliation agreement. To do so would be to undermine the goals and specifications for the redistribution of residency positions as set forth under section 5503 of the Affordable Care Act. However, the commenters' provide a compelling argument that this limitation seems contradictory in that it allows these affiliated programs to lose slots, but not gain them when they meet the redistribution criteria. Further, we understand that training needs can change over time, and there may be a need to cross-train residents in different hospital settings. In addition, because slots received under section 5503 are to be paid with the same direct GME PRA and IME multiplier as a hospital's other residents (unlike slots received under section 422 of the MMA which are paid at different payment rates), it would not present an administrative burden to include section 5503 slots in Medicare GME affiliation agreements. Therefore, we are revising our proposal and adopting the commenters' suggestion to permit hospitals to use slots awarded under section 5503 as part of Medicare GME affiliation agreements after 5 years, which would coincide with the end of the time period of other restrictions applicable to slots awarded under section 5503. Thus, slots awarded under section 5503 could first be used (either lent or received) as part of Medicare GME affiliation agreements for the academic year beginning July 1, 2016. However, we caution that section 5503 slots that are used in Medicare GME affiliation agreements on or after July 1, 2016, are at risk for removal by the Medicare contractor from those affiliation agreements if, while auditing a cost report that falls within the 5-year period, the contractor finds that the hospital did not meet the primary care average or 75 percent threshold requirement.

After consideration of the public comments we received, we are

finalizing our proposals not to exempt slots added under section 5503 from the rolling average or the IRB ratio. However, we are accepting the commenters' request regarding use of the section 5503 slots in Medicare GME affiliation agreements, and we are modifying our proposal policy to allow these slots to be used as part of the FTE caps in Medicare GME affiliation agreements for the academic year beginning July 1, 2016.

17. Other Issues Related to a Request for Increase in the FTE Caps under Section 5503 of the Affordable Care Act

a. Rural Hospitals or Urban Nonteaching Hospitals

Rural hospitals may receive an adjustment to their FTE caps for establishing a new residency program under § 413.79(e)(1)(iii) of the existing regulations at any time. Therefore, if a rural hospital is interested in starting a new program, or interested in participating in training residents in a new program on or after July 1, 2011, it need not apply for slots under section 5503 of the Affordable Care Act for that new program. If a rural hospital seeks to expand an existing program, and does not have sufficient space under its existing FTE caps to cover those additional residents, the rural hospital may apply for an increase to its FTE caps under section 5503. Similarly, an urban hospital may request additional slots under section 5503 for the purpose of expanding an existing program. A hospital, rural or urban, that is not yet a teaching hospital and does not have a cap established, may *not* apply for a permanent adjustment to their FTE caps under section 5503 since a non-teaching hospital may apply for a permanent cap adjustment under current Medicare regulations at § 413.79(e). Also, if an urban non-teaching hospital becomes a teaching hospital because it begins to serve as a rotating site for another hospital's existing program, it may apply for additional slots under section 5503, which would not preempt the hospital from later getting a new cap adjustment under § 413.79(e) for starting a new program.

We did not receive any public comments on this section, and we are finalizing our proposals accordingly.

b. Closed Teaching Hospitals

We note that under section 5506 of the Affordable Care Act, as explained further in section XXI.E. of this preamble, the FTE resident caps of teaching hospitals that close on or after March 23, 2008, are to be redistributed to other qualifying hospitals according to specific criteria. Assuming a teaching hospital closed recently, it is possible that based on the closed teaching hospital's three most recent cost reporting periods ending prior to March 23, 2010, its FTE resident caps could be subject to reduction under section 5503. However, so as to avoid duplication of FTE resident slots in the redistribution processes under sections 5503 and 5506, in the August 3, 2010 proposed rule (75 FR 46411), we proposed that if a hospital closes on or after March 23, 2008, then its FTE resident cap slots would *not* be redistributed under section 5503, but would be reserved for redistribution under section 5506.

We received one public comment in support of this proposal, and we are finalizing our policy accordingly.

c. Requirements for Hospitals That Receive Additional Slots Under Section 5503

Section 1886(h)(8)(B)(ii) of the Act, as added by section 5503(a)(4) of the Affordable Care Act, specifies requirements and thresholds that a hospital that applies for and receives additional slots effective July 1, 2011, must meet in order to retain those slots. Under section 422 of Public Law 108–173, hospitals that received additional slots were not held accountable for meeting any requirements once those slots were received effective July 1, 2005, nor did section 422 require that CMS conduct any subsequent reviews of the hospitals that received the slots in order to determine that the hospitals were meeting certain thresholds. However, section 1886(h)(8)(B)(ii) of the Act, as added by section 5503 of the Affordable Care Act, specifies requirements that a hospital that receives an increase in its FTE resident caps under section 1886(h)(8)(B)(i) must meet, at least for a 5-year period beginning on or after July 1, 2011, and section 1886(h)(8)(B)(iii) directs the Secretary to reduce the FTE caps of the hospital by the same number of FTE residents by which the hospital's FTE caps were increased if the hospital fails to meet these requirements. Specifically, section 1886(h)(8)(B)(ii) of the Act states, "a hospital that receives an increase in the otherwise applicable resident limit under this subparagraph shall ensure, during the 5-year period beginning on the date of such increase, that—

(I) The number of full-time equivalent primary care residents, as defined in paragraph (5)(H) (as determined by the Secretary), excluding any additional positions under subclause (II), is not less than the average number of full-time equivalent primary care residents (as so determined) during the 3 most recent cost reporting periods ending prior to the date of enactment of this paragraph; and

(II) Not less than 75 percent of the positions attributable to such increase are in a primary care or general surgery residency (as determined by the Secretary).

The Secretary may determine whether a hospital has met the requirements under this clause during such 5-year period in such manner and at such time as the Secretary determines appropriate, including at the end of such 5-year period."

Section 1886(h)(5)(H) of the Act defines "primary care resident" as a resident enrolled in an approved medical residency training program in family medicine, general internal medicine, general pediatrics, preventive medicine, geriatric medicine, or osteopathic general practice. In the August 3, 2010 proposed rule (75 FR 46411), we proposed that a hospital that is applying to receive additional slots would have to submit data from the three most recent cost reporting periods ending before March 23, 2010 (the date of enactment) on the number of unweighted FTE residents in these primary care programs. We note that this primary care average is based on the hospital's total FTE count that would otherwise be allowable in absence of the FTE cap; if a hospital is training FTE residents in excess of its FTE caps, it would still determine the 3-year average based on the total number of unweighted primary care FTE residents. A total primary care FTE count, one for IME and one for direct GME, is sufficient for the hospital for each of these three cost reporting periods; a hospital need not report these data by specialty. However, we note that, currently, the Medicare cost report does not track a hospital's number of primary care residents. For direct GME, on Worksheet E–3, Part IV, line 3.19, the hospital's number of weighted primary care and OB/GYN residents is reported. Thus, if a hospital trains OB/GYN residents in addition to primary care residents, we proposed that the OB/GYN count must be subtracted from the number reported on line 3.19 of Worksheet E–3, Part IV for the hospital's three most recent cost reporting periods ending before March 23, 2010. This would produce a weighted FTE count for direct GME, which should then be converted to an unweighted count. In any case, the source documentation for these data is the rotation schedules for the applicable years. For IME, on Worksheet E, Part A, there is no line that currently records the number of

primary care residents, as the distinction between primary care and nonprimary care residents is only necessary in the direct GME payment formula (due to the use of a primary care and OB/GYN PRA and a nonprimary care PRA for certain years).

Therefore, in the August 3, 2010 proposed rule (75 FR 46412), we proposed that the applicant hospital must develop from its rotation schedules three IME FTE primary care counts to correspond to its three most recent cost reporting periods ending before March 23, 2010. As part of its application, we proposed that the hospital must include the documentation that it used to arrive at its direct GME and IME primary care FTE counts, including a copy of Worksheet E–3, Part IV for direct GME, and if the hospital has an OB/GYN program, the rotation schedules corresponding to the three most recent cost reporting periods ending prior to March 23, 2010 for OB/GYN, and the rotation schedules for all primary care residency programs used to establish the IME primary care FTE count corresponding to the three most recent cost reporting periods ending prior to March 23, 2010. Although we considered proposing that a hospital may demonstrate that it is complying with the requirement to maintain the primary care average with only a single unweighted FTE count, rather than one FTE count for direct GME and one FTE count for IME, we believed that we needed to propose to require documentation from both a direct GME and an IME FTE count because section 5503 of the Affordable Care Act amended section 1886(d)(5)(B)(v) of the Act to make the entire section 1886(h)(8), of which maintenance of this primary care average is a part, applicable for purposes of IME. Thus, both section 1886(h) of the Act for direct GME and section 1886(d)(5)(B) of the Act for IME are equally impacted by section 5503. Furthermore, we proposed that the FTE counts for IME and direct GME used to derive these primary care averages are subject to audit by the Medicare contractors, and that, as part of reviews or audits performed by the Medicare contractors in accordance with their normal audit plans, the Medicare contractors would check whether a hospital is maintaining its primary care average in each of the cost reports in the 5-year period as early as tentative settlement of those five respective cost reports, and may take prompt action accordingly to adjust a hospital's FTE caps and direct GME and IME interim payments.

In addition to maintaining this average number of primary care residents, section 1886(h)(8)(B)(ii)(II) of the Act also requires that a hospital that receives an increase to its FTE resident caps under section 1886(h)(8)(B)(i) of the Act must ensure that 75 percent of those slots are used to train primary care or general surgery residents. A hospital that applies for additional slots may or may not already train at least 75 percent or more of its residents in primary care or general surgery programs. At a minimum, the applicant hospital is required to maintain the average number of FTE primary care residents that it trained during the three most recent cost reporting periods ending prior to March 23, 2010. Further, in the August 3, 2010 proposed rule (75 FR 46412), we proposed that in addition to the primary care residents used to maintain the primary care average, the applicant hospital must separately ensure that at least 75 percent of the increased FTE cap slots it receives are used to count FTE residents in primary care or general surgery. We proposed that the hospital must be able to document that, during each of the 5 years in the 5-year period of July 1, 2011 to June 30, 2016, for IME and direct GME respectively, and for each cost report during those 5 years, that not only is it maintaining its primary care average, but that 75 percent of the increased FTE cap slots that it received are being used to count residents training in primary care or general surgery programs. For example, Hospital A has a June 30 fiscal year end, an FTE cap of 100 FTEs, and a total FTE count of 110. In its three most recent cost reports ending prior to March 23, 2010 (fiscal year end June 30, 2009, June 30, 2008, and June 30, 2007), Hospital A was training 60 primary care FTE residents, 50 primary care FTE residents, and 40 primary care FTE residents respectively. The average number of primary care FTE residents during those 3 years is 50. Hospital A applied for and received 10 additional FTE cap slots under section 5503. Beginning July 1, 2011, for each cost report ending June 30, 2012, June 30, 2013, June 30, 2014, June 30, 2015, and June 30, 2016, Hospital A must ensure that it does not train less than 50 primary care FTE residents, and it must ensure that it trains an additional 7.5 FTEs of the 10 slots it receives in either primary care or general surgery. In another example, Hospital B has a December 31 fiscal year end, an FTE cap of 10 FTEs, and a total FTE count of 12. In its three most recent cost reports ending prior to March 23, 2010 (fiscal year end December 31, 2009, December 31, 2008 and December 31, 2007), Hospital A was training 12 primary care FTE residents in each of the 3 years. The average number of primary care FTE residents is 12. Hospital B applied for and received 4 additional FTE cap slots under section 5503. Beginning July 1, 2011 and ending June 30, 2016, Hospital B must ensure that it does not train less than 12 primary care FTE residents, and it must ensure that it trains an additional 3 FTEs of the 4 slots it receives, for a total of 15, in either primary care or general surgery. We proposed that the Medicare contractors would check whether a hospital is maintaining this 75-percent threshold as part of reviews or audits performed by the Medicare contractors in accordance with their normal audit plans in the 5-year period as early as tentative settlement of those five respective cost reports, and may take action accordingly to adjust a hospital's FTE resident caps and direct GME and IME interim payments.

It is possible that there are hospitals that are not currently training, nor have they trained in any of their three cost reporting periods ending prior to March 23, 2010, any primary care residents at all, but that such hospitals are applying for an increase to their FTE caps for a new primary care or general surgery program that they would like to start. Such hospitals would have a primary care average of zero. Because the intent of section 5503 is to try to increase the number of primary care (or general surgery) residents in training, we proposed that such hospitals would be able to apply for additional slots under section 5503. Should such a hospital receive an FTE cap increase, we proposed that 75 percent of the increased FTE cap slots must be used to count FTE residents in either primary care or general surgery. We proposed that a hospital is required to document in each of the 5 years that it has maintained the primary care average and that at least 75 percent of the slots it receives is used for training either primary care and/or general surgery residents rather than only once at the end of the 5-year period. As explained more fully below, if a hospital has not met these requirements, in the proposed rule, we stated that we believe it would be less disruptive financially and administratively to a hospital if we make the adjustment to the hospital's FTE resident caps under section 1886(h)(8)(B)(iii)(I) of the Act and recover any overpayment after 1 year rather than after the conclusion of the

full 5 year monitoring period under section 1886(h)(8)(B)(ii) of the Act.

Section 1886(h)(8)(B)(ii) of the Act also states that "The Secretary may determine whether a hospital has met the requirements under this clause during such 5-year period in such manner and at such time as the Secretary determines appropriate, including at the end of such 5-year period" (emphasis added). In the August 3, 2010 proposed rule (75 FR 46413), we proposed that the "5-year period beginning on the date of such increase" is July 1, 2011 through June 30, 2016, because the effective date of section 5503 is for portions of cost reporting periods beginning on or after July 1, 2011. Thus, it is during this 5-year period that an "average number of full-time equivalent primary care residents" must be maintained, and that 75 percent of the additional slots must be trained in primary care or general surgery, for IME and direct GME respectively. However, the Secretary is given some discretion as to how and when she determines whether a hospital is meeting or has met the requirements "during such 5-year period." Although we believe that the 5-year period must be within July 1, 2011 through June 30, 2016, we believe we have flexibility to determine which cost reporting periods within that 5-year period we may use to assess whether the hospital is consistently meeting the required criteria. For the sake of administrative simplicity, on behalf of hospitals and the Medicare contractors, we proposed that the Medicare contractors, in accordance with their normal audit plans, would make assessments based on a hospital's fiscal year when possible, such that the Medicare contractors could make a first assessment for an initial "short" period, then annually as each of the hospital's fiscal year ends until there is another final "short" assessment period that starts after the provider's last fiscal year end within the 5-year window and runs through June 30, 2016. If a hospital has a June 30 fiscal year end, we proposed that the Medicare contractor could assess whether the hospital is meeting the required criteria five times, starting with its cost reporting period beginning on July 1, 2011, and ending with its fifth cost reporting period that starts on July 1, 2015 (and ending June 30, 2016). However, for hospitals that have a fiscal year end of other than June 30, we proposed that the Medicare contractors could assess whether the hospital met the requirements for the portion of its cost reporting period that occurs after July 1, 2011, its subsequent full cost reporting periods, and then ending with the portion of the cost reporting period prior to June 30, 2016. In other words, we proposed that the hospital would be considered to meet the required criteria in "Year 1" if it meets the requirements based on an annualized FTE count from July 1, 2011 through the end of its cost reporting period; in each of years 2 through 4, it must meet the requirements based on its next three cost reporting periods; and in year 5, it must meet the requirements based on an annualized FTE count from the first day of its cost reporting period through June 30, 2016 (which is the last day on which a hospital has any obligation to meet these requirements). For example, assume Hospital C has a September 30 fiscal year end, and receives 16 additional slots under section 5503, and has a primary care average of 30 FTE residents. We proposed that during the period of July 1, 2011 through June 30, 2016, Hospital C must demonstrate that it is training at least 75 percent of its 16 slots in primary care or general surgery (that is, 12 slots), and that it maintains a primary care FTE count of 30, as follows:

Year 1—July 1, 2011 to September 30, 2011, with an annualized count of 3 (that is, 12 divided by 4) additional FTEs in primary care/general surgery, and an annualized count of 7.5 (that is, 30 divided by 4) FTEs training in primary care residency programs.

Year 2—October 1, 2011 to September 30, 2012, with 12 FTEs in primary care/general surgery, and 30 FTEs in primary care programs.

Year 3—October 1, 2012 to September 30, 2013, with 12 FTEs in primary care/general surgery, and 30 FTEs in primary care programs.

Year 4—October 1, 2012 to September 30, 2014, with 12 FTEs in primary care/general surgery, and 30 FTEs in primary care programs.

Year 5—October 1, 2014 to September 30, 2015, with 12 FTEs in primary care/general surgery, and 30 FTEs in primary care programs.

Year 6—October 1, 2015 to June 30, 2016, with an annualized count of 9 additional FTEs in primary care/general surgery, and an annualized count of 22.5 FTEs training in primary care residency programs.

We proposed to reserve the right to assess as many times as necessary in the 5-year period that a hospital is meeting the required criteria. Furthermore, if a Medicare contractor determines during an audit that a hospital did not meet the requirements during, for example, the second year, the contractor could go back and audit the first year (full, or short period), and make a retroactive adjustment. We also understand that we should consider that hospitals might not immediately fill all the slots they receive, particularly because they are only required to demonstrate the likelihood of filling the slots within the first three cost reporting periods beginning on or after July 1, 2011. Accordingly, in the preceding example in which Hospital C was awarded 16 slots and has a September 30 fiscal year end, assume it only added 2 actual residents immediately on July 1, 2011. Two residents equate to 0.5 FTE for the 3-month period of July 1, 2011 to September 30, 2011. Seventy five percent of 0.5 FTE equals 0.375. We proposed that at least 0.375 of the new FTEs added for the period of July 1, 2011 to September 30, 2011 must be in primary care or general surgery in order to meet the requirement in "Year 1."

In a case where the Medicare contractor determines that a hospital did not meet the requirements in a cost reporting year within the 5-year time period, section 1886(h)(8)(B)(iii) of the Act states that "the Secretary shall—

(I) Reduce the otherwise applicable resident limit of the hospital by the amount by which such limit was increased under this paragraph; and

(II) Provide for the distribution of positions attributable to such reduction in accordance with the requirements of this paragraph." Hospitals have different fiscal year ends and are subject to different audit schedules, which may occur several years after a hospital's cost report is submitted. Therefore, even though we proposed that the Medicare contractors may make adjustments to a hospital's direct GME and IME payments as early as tentative settlement, it may be several years after June 30, 2016 before CMS determines the exact number of reductions, if any, that are applied to the FTE caps of hospitals that received additional slots, but that failed to meet the requirements under section 1886(h)(8)(B)(ii) of the Act, discussed above. However, once we have determined the number of slots available for a second redistribution, we would distribute them "in accordance with the requirements of this paragraph." That is, we would distribute the slots to hospitals that applied under this first redistribution and that qualified to receive the slots they requested, but for whom we did not have sufficient slots in the "pool" to grant them the full number of FTE slots that they requested. As discussed above in section XXI.D. of this preamble, because of the requirement that 70 percent of the slots be redistributed to hospitals within States with resident-to-population ratios in the lowest quartile,

it is possible that, after first distributing slots to hospitals with the highest scores on their CMS Evaluation Form, there may be some remaining qualifying hospitals within the same priority level category that receive the same score on the CMS Evaluation Form. Thus, we would have no way of distinguishing among these hospitals of equal rank. If this situation occurs, we proposed to prorate the remaining amount of slots in the "70-percent pool", and distribute an equal share of slots to these hospitals of equal rank. If a similar situation occurs within the "30-percent pool", we also proposed to prorate the remaining amount of slots in the "30-percent pool" and distribute an equal share of slots to hospitals of equal rank. Accordingly, in the event that there is a second redistribution process pursuant to section 1886(h)(8)(B)(iii)(II) of the Act, we proposed to distribute the slots in the "pool" (created by the failure of one or more hospitals to meet the criteria specified under section 1886(h)(8)(B)(ii)) of the Act to those hospitals that did not receive all of the slots for which they technically qualified, and for which we had to prorate under the first redistribution. If we have sufficient slots to fully satisfy the original requests of those qualifying hospitals, we would assign them the difference between the prorated amount awarded under the first redistribution and the amount of slots they requested on their original application (assuming they actually otherwise qualified for all the slots they requested). In other words, we would go back to the original applications and continue to assign slots to those hospitals that originally qualified to receive slots under section 5503, but for which we did not have sufficient slots to satisfy their requests. We proposed to assign the additional slots in the same priority order as under the first redistribution process under section 5503, resuming where we left off, until all the slots have been distributed. After such point, there would be no further harvesting of slots or redistribution under section 5503.

In the August 3, 2010 proposed rule (75 FR 46414), we proposed to add new regulations at § 412.105(f)(1)(iv)(C)(2) for IME and at § 413.79(n) for direct GME to reflect our proposals regarding hospitals receiving increases to their FTE resident caps under section 5503, and the requirements that hospitals must meet in order to keep those FTE slots, and not be subject to a removal of those FTE slots during the 5-year period of July 1, 2011 through June 30, 2016.

Comment: One commenter requested clarification regarding how the 5-year restrictions on the use of redistributed slots would apply to a hospital that is training residents in excess of its cap. The commenter believed that such a hospital would use the additional cap slots it receives under section 5503 for "over-the-cap" residents, as long as the hospital converts the "over-the-cap" positions to primary care or to general surgery to meet the primary care average and the 75 percent requirement.

Response: Even if a hospital that is already training residents in excess of its caps applies for additional slots, that hospital must use those cap slots in accordance with the 5-year restrictions established by section 1886(h)(8)(B)(ii) of the Act; that is, it must maintain the primary care average, and at least 75 percent of the positions must be used for additions of primary care or general surgery residents. The hospital must devote at least 75 percent of those slots to new primary care and/or general surgery programs, or to expanding existing primary care and/or general surgery programs. For example, a hospital with an FTE cap of 100 is training 50 primary care residents and 60 non-primary care residents, for a total of 110 FTE residents being trained. Assume the hospital's primary care average is also 50. The hospital receives 10 slots under section 5503, raising its FTE cap from 100 to 110. The hospital must make sure to continue to train at least 50 FTEs in primary care, excluding from this count any of the new primary care positions created under section 5503, so as to meet the primary care average requirement. That is, the hospital cannot reduce its primary care FTE count from 50 to 40, and then increase its primary care FTE count to 50 again using the 10 FTEs received under section 5503 for primary care residents in an attempt to meet the primary care average and the 75 percent requirement, because section 1886(h)(8)(B)(ii)(I) of the Act states "excluding any additional positions under subclause (II)." Rather, since the hospital received 10 slots under section 5503, the hospital must use at least 75 percent of those 10 positions, or 7.5, to either create a new or expand an existing primary care or general surgery program. If the hospital wishes to maintain training 110 FTE residents with a cap of 110, the hospital would need to eliminate 7.5 FTEs of its existing non-primary care residents, and in their place, train an *additional* 7.5 primary care or general surgery FTE residents. Assuming that the hospital chose to use the slots for primary care (and not for general surgery), the hospital would then be training 57.5 primary care FTE residents and 52.5 nonprimary care FTE residents. If the hospital does not want to reduce its non-primary care FTE count, then it would need to increase the number of residents it is training *above* 110, ensuring that it trains at least 7.5 *additional* FTEs in either primary care or surgery.

The situation is somewhat different for a hospital that is training residents in excess of its FTE resident cap, but *all* of the residents it has been training are in primary care specialties. If this hospital receives slots under section 5503, then this hospital would not need to convert any positions to primary care or general surgery, because it is already training 100 percent of its FTEs as primary care residents. It would be using 75 percent of the additional slots to start a new or expand an existing primary care or general surgery program. For example, a hospital has an FTE cap of 15, but after July 1, 2011, it is training 20 primary care FTE residents (and no other residents). Assume its primary care average is also 20 FTEs. It applies for and receives 4 slots, raising its FTE cap to 19. This hospital must continue to train 20 primary care FTE residents on or after July 1, 2011, in order to meet the primary care average requirement. Furthermore, it must use 75 percent of 4 of the slots it received (that is, 3) to train an *additional* 3 residents in primary care or general surgery programs, for a total of at least 23 primary care residents being trained (or 20 primary care in addition to 3 new surgery residents being trained).

Comment: One commenter said that CMS' proposed application of the primary care average test and the requirement that 75 percent of the slots received must be in primary care or general surgery appears "cumulative," which can lead to "absurd results." The commenter gave the following example:

The hospital has a current resident cap of 24 FTEs. For the last 3 years, the hospital has trained an average of 36 FTE residents, so it is 12 over its cap. In addition, for the last 3 years, the hospital has had an average of 36 residents in primary care, that is, 100 percent in primary care. One would think that 100 percent primary care is a good thing, but it is impossible for this hospital to change its mix to add 75 percent of its increased slots above the 3-year average in primary care.

The commenter believed this result was not required by the ACA. Specifically, section 1886(h)(8)(B)(ii) of the Act states, "a hospital that receives an increase in the otherwise applicable resident limit under this subparagraph shall ensure, during the 5-year period

beginning on the date of such increase, that—

(I) The number of full-time equivalent primary care residents, as defined in paragraph (5)(H) (as determined by the Secretary), *excluding any additional positions under subclause (II)*[emphasis added by the commenter], is not less than the average number of full-time equivalent primary care residents (as so determined) during the 3 most recent cost reporting periods ending prior to the date of enactment of this paragraph; and

(II) Not less than 75 percent of the positions attributable to such increase are in a primary care or general surgery residency (as determined by the Secretary).

The commenter believed that "excluding any additional positions" added for primary care means that the number of primary care positions maintained in the prior 3-year period should be determined by excluding primary care positions over the cap for which the hospital is seeking an addition to its cap. Thus, the commenter believed in the example above, the primary care average requirement would be met by the hospital continuing to train 100 percent of their FTEs as primary care residents, and the 75 percent test would be applied to residents the hospital is already training in excess of its cap.

Response: We believe the commenter has misunderstood our proposal regarding the requirements for meeting the 75 percent threshold requirement. Contrary to the commenter's assertion, the hospital in the commenter's example need not "change its mix to add 75% of its increased slots above the 3 year average in primary care." Rather, the hospital in the example is already training only primary care residents. To meet the primary care average requirement, it would not need to convert current positions to primary care. As explained in response to the previous comment, to meet the test at section 1886(h)(8)(B)(ii)(I), this hospital would need to continue to train at least 36 primary care FTE residents, and in so doing, would satisfy the primary care average requirement. In addition, to meet the 75 percent threshold requirement, the hospital will need to increase the number of residents it is training and *add* at least 9 FTEs (that is, 75 percent of 12 FTEs it receives under section 5503) for primary care or general surgery, for a total of 45 primary care residents (or a total of 36 primary care and 9 new surgery residents). This is because, under section 1886(h)(8)(B)(ii)(I) of the Act, a hospital cannot apply the positions it is using to fulfill the 75 percent threshold toward meeting the primary care average requirement. This is also consistent with the example given with Hospital B in the third column on page 46412 of the August 3, 2010 proposed rule. ["In another example, Hospital B has a December 31 fiscal year end, an FTE cap of 10 FTEs, and a total FTE count of 12. In its three most recent cost reports ending prior to March 23, 2010 (fiscal year end December 31, 2009, December 31, 2008 and December 31, 2007), Hospital A was training 12 primary care FTE residents in each of the 3 years. The average number of primary care FTE residents is 12. Hospital B applied for and received 4 additional FTE cap slots under section 5503. Beginning July 1, 2011 and ending June 30, 2016, Hospital B must ensure that it does not train less than 12 primary care FTE residents, and it must ensure that it trains an *additional* 3 FTEs of the 4 slots it receives in either primary care or general surgery. (75 FR 46412)] This means that Hospital B must *add* 3 additional FTEs *above* the 12 it is training, and those 3 FTEs would either be in primary care or general surgery.

The commenter believed that "excluding any additional positions" added for primary care means that the number of primary care positions maintained in the prior 3-year period should be determined by excluding primary care positions over the cap for which the hospital is seeking an addition to its cap. We disagree with the commenter. Knowing that the overall goal of section 5503 is to increase the number of primary care practitioners, we believe that the phrase "excluding any additional positions under subclause (II)" simply means that a hospital should not attempt to meet its primary care average requirement, which is based on *historical* numbers of primary care residents trained, by filling in the quota with *newly added* primary care positions as a result of slots received under section 5503. That is, with the primary care average requirement, Congress sought a measure of assurance that, at least with respect to hospitals that receive slots under section 5503, a relatively consistent "baseline" number of primary care residents would continue to be trained, while, through the 75 percent requirement "under subclause (II)," at least 75 percent of the redistributed slots would also be used for *additional* primary care (or general surgery) slots. To the extent that the redistributed slots must be used to create new or expand existing programs, this means that even more primary care residents above the "baseline" will be trained. That is why we proposed in the proposed rule that, "At a minimum, the applicant hospital is required to maintain the average number of FTE primary care residents that it trained during the three most recent cost reporting periods ending prior to March 23, 2010. Further, we are proposing that in addition to the primary care residents used to maintain the primary care average, the applicant hospital must separately ensure that at least 75 percent of the increased FTE cap slots it receives are used to count FTE residents in primary care or general surgery" (emphasis added, 75 FR 46412).

Comment: Commenters disagreed with CMS' proposal that hospitals that receive additional slots under section 5503 must demonstrate that for each cost report during the 5 years from July 1, 2011 through June 30, 2016, for IME and direct GME respectively, at least 75 percent of the FTE residents added in each year must be used for residents training in primary care or general surgery programs. The commenters believed this requirement is burdensome to both hospitals and contractors, and is also untenable because hospitals do not always fill all positions they offer. The commenters believe that CMS has the authority to make determinations about whether hospitals have met the 75 percent and the primary care average requirements at the end of the 5-year period: "The Secretary may determine whether a hospital has met the requirements under this clause during such 5-year period in such manner and at such time as the Secretary determines appropriate, including at the end of such 5-year period." The commenter also encouraged CMS to allow hospitals some flexibility in meeting the 75 percent requirement, because there are a number of reasons why a hospital's primary care and general surgery numbers could fluctuate slightly from year to year, including accreditation standards, fill match rates, and leaves of absence. The commenters requested that CMS find a hospital to have met the 75 percent requirement so long as the average number of residents the hospital added over the course of the 5 years is within the greater of 2 resident FTEs or 95 percent of the target number of primary care and general surgery residents. For example, if a hospital was awarded 20 new slots through the redistribution program and added an additional 20 resident FTEs, 75 percent of 20 would be 15 resident FTEs. CMS should find the hospital to have met the 75 percent requirement so long as on

average, at the end of the five year period, at least 13 of those FTE residents were training in primary care or general surgery.

Another commenter recommended that hospitals demonstrate that they met the 75 percent test over no less than 3 years. The commenter said there "is no room for mistakes under CMS' proposal." The commenter noted that FTEs are measured in fractions, and "it is conceivable that a hospital could lose additions to its cap by reason of falling short .01 of the 75 percent standard." The commenter argued that there are various reasons why a hospital might fall short of the 75 percent threshold (such as residents leaving the program due to personal or other reasons or uncertainties in rotation schedules). The commenter argued that CMS has used "multi-year measures" in other contexts, such as the 3-year rolling average for the direct GME and IME FTE count and in the context of geographic reclassification for the wage index. Therefore, particularly considering the "severe adverse consequences" that could result from the loss of additions to a hospital's cap, CMS should apply an averaging method to measuring compliance with the 75 percent test. However, one commenter applauded the 75 percent requirement and requested that CMS extend this requirement beyond 5 years, if the statute permits.

Another commenter asked that CMS allow for concessions to be made in the calculation of the average number of primary care residents that were trained in the last three cost reporting periods ending prior to March 23, 2010. The commenter stated that concessions may be necessary to account for changes in school, program(s), and rotation(s) that have occurred either during those 3 years or between the end of the last fiscal year and the time the additional slots are awarded. Some of these changes may include a closure of a program, a shifting of a rotation to another affiliated hospital, and a shifting of residents between training sites. Another commenter requested that we clarify and provide more detail regarding the repercussions to hospitals that are awarded resident slots through the redistribution program but fail to meet the 75 percent primary care/general surgery requirement or the primary care average requirement in a given hospital fiscal year.

Response: We agree with the commenters that the Secretary has the authority to make determinations about whether a hospital has met the 75 percent and the primary care average requirements at the end of the 5-year period. Section 1886(h)(8)(B)(ii)(II) of the Act states, "The Secretary may determine whether a hospital has met the requirements under this clause during such 5-year period in such manner and at such time as the Secretary determines appropriate, including at the end of such 5-year period." We stated in the proposed rule (75 FR 46413) that we believe we have the flexibility to determine which cost reporting periods within the 5-year period of July 1, 2011 to June 30, 2016 we may use to assess whether a hospital is consistently meeting the required criteria. We also proposed to reserve the right to assess as many times as necessary in the 5-year period that a hospital is meeting the criteria. Further, we also proposed that Medicare contractors, in accordance with their normal audit plans, would make assessments as to whether hospitals are meeting the criteria. Because every hospital is not audited every year, the Medicare contractor may not audit to determine if a hospital is meeting the criteria every year within the 5-year period. We believe this proposal is fair and in accordance with normal audit procedures and, therefore, we are not adopting the comments requesting that the contractors determine that hospitals met the requirements over no less than 3 years or only once at the end of the 5-year period. While we certainly note the "applause" from one commenter regarding the 75 percent threshold requirement, the statute clearly limits the "probationary period" to 5 years and, therefore, we cannot extend such monitoring beyond June 30, 2016.

We are sympathetic to the commenters' concerns that there is "no room for mistakes under CMS' proposal," and that some kind of range or "multi-year" average should be used to measure compliance with the 75 percent test. Another commenter asked that CMS allow for concessions to be made in the calculation of the average number of primary care residents that were trained in the last three cost reporting periods ending prior to March 23, 2010. We have considered whether the Secretary has the authority at all to allow for any "wiggle room" in determining whether a hospital meets the primary care average and the 75 percent threshold, and whether that authority would apply to the FTE counts on the applicable cost report being reviewed during the 5-year period, or whether, as the one commenter suggests, concessions could instead be made in the determination of the primary care average based on the cost reports that most recently ended on or before March 23, 2010. We do not believe we have flexibility to adjust the number for the primary care average or the 75-percent threshold. The statutory language stating "The number of full-time equivalent primary care residents, as defined in paragraph (5)(H) (*as determined by the Secretary*), excluding any additional positions under subclause (II), is not less than the average number of full-time equivalent primary care residents (as so determined) during the 3 most recent cost reporting periods ending prior to the date of enactment of this paragraph" is very specific; "close" is not close enough. Therefore, we are not adopting the commenter's request that a hospital has met the 75 percent requirement so long as the average number of residents the hospital added over the course of the 5 years is within the greater of 2 resident FTEs or 95 percent of the target number of primary care and general surgery residents. However, we believe we have the discretion to consider a hospital's performance over more than 1 year, rather than only always reviewing each year during the 5 years independently. For example, if Hospital A's GME payments are reviewed during Year 1 of the 5-year period, and Hospital A is found to not meet the primary care average or the 75 percent threshold requirement, then Hospital A would lose the slots it received under section 5503. If Hospital A has met the requirements in Year 1, it would keep the slots. If Hospital A is reviewed in Year 2, and the contractor determines that in Year 2's cost report, the primary care average or the 75 percent threshold is not met, then rather than immediately removing the slots that the hospital received, the contractor could review Year 1's and Year 2's cost reports, and average the resident counts from both years to determine if the hospital has met the criteria over a 2-year period. If, over that 2-year period, the hospital met the requirements, then the hospital would be able to keep the slots it received under section 5503. If not, then the contractor would remove the slots. Similarly, if Hospital A's GME payments are reviewed during Year 3 of the 5-year period, and the contractor determines that in Year 3's cost report, the primary care average or the 75 percent threshold is not met, then rather than immediately removing the slots that the hospital received, the contractor could review Year 1's and Year 2's cost reports, and average the resident counts from all 3 years to determine if the hospital has met the criteria over a 3-year period. If, over that 3-year period, the hospital met the requirements, then the hospital would be able to keep the

slots it received under section 5503. If not, then the contractor would remove the slots from the earliest year (that is, cost reporting period) that is reopenable in which it would be determined that the hospital did not meet the requirements. The same method could apply for reviews occurring during Years 4 and 5 of the 5-year period.

Comment: Another commenter noted that CMS proposed that Medicare contractors, in accordance with their normal audit plans, would make assessments based on a hospital's fiscal year "*when possible*" (commenter emphasis added), and as early as the tentative settlements, such that the Medicare contractors could make a first assessment for an initial short assessment period, then annually as each of the hospital's fiscal year ends until there is another final short assessment period that starts after the provider's last fiscal year end within the 5-year window and runs through June 30, 2016. The commenter stated that it is unlikely that the Medicare contractor might review a hospital's number of primary care residents as early as the tentative settlement because (1) a review of interns and residents is not part of the normal review process for a tentative settlement, and (2) this information is not on the cost report in the level of detail needed for review. The commenter expected the most likely scenario to be that a Medicare contractor would review the information, if available, at desk review (which is supposed to be within 1 year of cost report submission, for timeliness), or at audit.

Response: In the August 3, 2010 proposed rule (75 FR 46412), we proposed that "the FTE counts for IME and direct GME used to derive these primary care averages are subject to audit by the Medicare contractors, and that, as part of reviews or audits performed by the Medicare contractors in accordance with their normal audit plans, the Medicare contractors would check whether a hospital is maintaining its primary care average in each of the cost reports in the 5-year period as early as tentative settlement of those five respective cost reports, and may take prompt action accordingly to adjust a hospital's FTE caps and direct GME and IME interim payments." Under this proposal, we did not necessarily *require* the Medicare contractors to review compliance with the primary care average during every tentative settlement, and at that time, to also adjust a hospital's FTE caps and interim payments. However, it was certainly our intention to clearly state that if noncompliance was discovered, then the contractors would not need to wait until final settlement to adjust a hospital's IME and direct GME payments, but such action could occur as soon as possible. It is still our intention to clearly state that it is within CMS' and the contractors' rights to adjust a hospital's IME and direct GME payments as early as possible within a cost report's submission and review cycle, and that we would not need to wait until desk review, actual audit, or final settlement to do so. However, the commenter has prompted us to consider what documentation is actually available to the contractors at tentative settlement. When a Medicare contractor would review a hospital's data to determine whether a hospital that received slots under section 5503 is meeting the primary care average for portions of cost reporting periods occurring between July 1, 2011 and June 30, 2016, the contractor would need the documentation that the hospital used to arrive at its direct GME and IME primary care FTE counts, including a copy of Worksheet E–3, Part IV for direct GME, and if the hospital has an OB/GYN program, the rotation schedules corresponding to the three most recent cost reporting periods ending prior to March 23, 2010 for OB/GYN, and the rotation schedules for all primary care residency programs used to establish the IME primary care FTE count corresponding to the three most recent cost reporting periods ending prior to March 23, 2010. Further, the contractor would need the rotation schedules for the cost reporting period under review (that is, the portions of cost reports occurring between July 1, 2011 and June 30, 2016). We agree with the commenter that rotation schedules and other documentation generally used for verifying FTE counts are not available at tentative settlement, as such source documentation is not typically submitted with the initial cost report. Source documentation is typically requested by the contractor and submitted by the hospital when a cost report is desk reviewed or audited, which would be subsequent to tentative settlement. Accordingly, in this final rule, we are emphasizing that when a Medicare contractor reviews one or more of a hospital's cost reports within the 5-year period as explained above, the contractor may take prompt action as soon as is feasible to adjust a hospital's FTE caps and direct GME and IME payments, and need not wait until final settlement to do so.

Comment: One commenter observed that the proposed rule states that Medicare contractors will check that hospitals that receive slots under section 5503 maintain a specified level of primary care residents through their normal audit plans. The commenter pointed out that Medicare contractors do not audit each teaching hospital every year as part of their normal audit plans, and if Medicare contractors are to validate the level of primary care residents at the hospitals that received additions to their FTE caps, this would be outside of the normal audit plan.

Response: In the August 3, 2010 proposed rule (75 FR 46413), we proposed to reserve the right to assess as many times as necessary in the 5-year period that a hospital is meeting the required criteria. Furthermore, if a Medicare contractor determines during an audit that a hospital did not meet the requirements during, for example, the second year, the contractor could go back and audit the first year (full, or short period), and make a retroactive adjustment. We will be providing separate instructions to the Medicare contractors regarding the implementation of section 5503 and the 5-year probationary period.

Comment: One commenter asked if the hospital has one or more cost reporting periods in which it does not maintain the primary care resident level, and then achieves the primary care resident level in another cost reporting period, will the FTE slots be reinstated. For example, a hospital in the first year of its 5-year period meets the requirement for training primary care residents. In the second year, it does not meet the requirement, so the Medicare contractor removes the additional FTE caps from both year one and year two. However, based on the third year's average, which includes years one, two and three, the provider meets the primary care requirements. The commenter wondered if, in this example, the FTE cap would be reinstated for all three years.

The same commenter pointed out that the information required to determine the level of primary care residents is not on the Medicare cost report, as noted in the proposed rule. Therefore, the Medicare cost report is insufficient as a primary source of documentation for this purpose. The commenter recommended that CMS require hospitals that receive additional slots under section 5503 to "reconcile" the FTE counts they will report on the Medicare cost report worksheets E, Part A, and E–3, Part IV, to their primary care resident FTE counts. The commenter believed the reconciliations should be submitted to the Medicare contractors, with documentation to support the reconciliation and the

number of primary care residents being trained at the hospital each year.

Response: Once the Medicare contractor and CMS determine that a hospital has failed to meet the primary care average requirement or the 75 percent threshold between July 1, 2011 and June 30, 2016, it would lose those slots permanently and the slots would not be reinstated, even if the hospital meets the requirements in a subsequent cost reporting period. We believe that once the Secretary determines that a hospital's FTE caps should be reduced, those slots are subject to redistribution under section 1886(h)(8)(B)(iii)(II). Therefore, we are not holding those slots in reserve on the chance that the hospital may meet the requirements in a subsequent cost reporting period. Further, we believe the commenter has misunderstood how the determinations regarding whether compliance with the primary care average requirement will be achieved. In the commenter's example, the commenter hypothesizes that based on the third year's average, which includes years one, two and three (that is, in cost reporting periods *during* the 5-year probationary period), the provider meets the primary care requirements. However, determination of the primary care average is prescribed clearly in the law at section 1886(h)(8)(B)(ii)(I) as being based on "* * * the average number of full-time equivalent primary care residents (as so determined) *during the 3 most recent cost reporting periods ending prior to the date of enactment of this paragraph*" (emphasis added). Thus, in fact what will happen is that the Medicare contractor will compare the primary care FTE count from a given cost reporting period between July 1, 2011 and June 30, 2016, to the primary care average number of FTE residents that was determined from averaging the primary care FTE count from *the 3 most recent cost reporting periods ending prior to March 23, 2010.* However, as we have stated in response to the previous comments requesting flexibility in the determinations regarding whether a hospital has met the primary care average requirement, if Hospital A's GME payments are reviewed during Year 3 of the 5-year period, and the contractor determines that in Year 3's cost report, the primary care average or the 75 percent threshold is not met, then rather than immediately removing the slots that the hospital received, the contractor could review Year 1's and Year 2's cost reports, and average the resident counts from all 3 years to determine if the hospital has met the criteria over a 3-year period. If, over that 3-year period, the hospital met the requirements, then the hospital would be able to keep the slots it received under section 5503. If not, then the contractor would remove the slots.

This commenter is correct that the information required to determine the level of primary care residents is not on the Medicare cost report. The commenter recommended that CMS require that hospitals that receive additional slots under section 5503 "reconcile" the FTE counts they will report on the Medicare cost report worksheets E, Part A, and E–3, Part IV, to their primary care resident FTE counts, and that the reconciliations should be submitted to the Medicare contractors, with documentation to support the reconciliation and the number of primary care residents being trained at the hospital each year. As we stated in response to a previous comment, when a Medicare contractor would review a hospital's data to determine whether a hospital that received slots under section 5503 is meeting the primary care average for portions of cost reporting periods occurring between July 1, 2011 and June 30, 2016, the contractor would need the documentation that the hospital used to arrive at its direct GME and IME primary care FTE counts, including a copy of Worksheet E–3, Part IV for direct GME, and if the hospital has an OB/GYN program, the rotation schedules corresponding to the three most recent cost reporting periods ending prior to March 23, 2010 for OB/GYN, and the rotation schedules for all primary care residency programs used to establish the IME primary care FTE count corresponding to the three most recent cost reporting periods ending prior to March 23, 2010. Further, the contractor would need the rotation schedules for the cost reporting period under review (that is, the portions of cost reports occurring between July 1, 2011 and June 30, 2016). We believe that contractors and hospitals should follow normal cost report and documentation submission requirements in this regard. As with other audit and reimbursement issues, hospitals are required to have documentation available and provide that documentation to the contractor upon request. The same would apply with the aforementioned required GME documentation so that the contractors may review a hospital's compliance with section 1886(h)(8)(B)(ii) of the Act.

Lastly, as stated previously in section XXI.D.12. of this final rule, we are clarifying in this final rule that "* * * the average number of full-time equivalent primary care residents (as so determined) during the three most recent cost reporting periods ending prior to the date of enactment of this paragraph" means the three most recent cost reports submitted to the Medicare contractor by March 23, 2010.

Comment: One commenter stated that some teaching hospitals that were awarded positions under section 422 of the MMA on the basis of qualifying to start or augment a residency program in one specialty actually used the acquired slots for other programs. The commenter asked CMS to explain in the final rule how the Agency will ensure that the awards actually go to create primary care slots.

Response: As we explained on page 46411 of the proposed rule, section 422 of Public Law 108–173 did not hold hospitals that received slots accountable for meeting any requirements once those slots were received effective July 1, 2005, nor did section 422 require CMS to conduct subsequent reviews of the hospitals that received slots in order to determine if the hospitals were meeting certain thresholds. However, section 1886(h)(8)(B)(ii) of the Act, as amended by the Affordable Care Act, specifically requires a hospital that receives slots under this provision to meet certain thresholds regarding training of primary care and/or general surgery residents for a period of 5 years. As we explained in the proposed rule and in this final rule, the Medicare contractors will perform reviews or audits to determine whether hospitals that received slots under section 1886(h)(8)(B)(i) of the Act are meeting those thresholds under section 1886(h)(8)(B)(ii) of the Act, and if not, those slots will be removed and redistributed in accordance with section 1886(h)(8)(B)(iii) of the Act.

Comment: One commenter argued that the preclusion on administrative and judicial review does not apply to audits that the Medicare contractors will complete, either every 5 years, or at the end of the 5-year period, and therefore, hospitals should have the opportunity to demonstrate that they met the requirements for how slots received under section 5503 must be used. Another commenter noted that CMS stated that determinations of the FTE cap reductions may not be subject to appeal. However, these FTE cap additions and reductions are reported on the Medicare cost report, which is subject to appeal.

Response: Section 5503(a)(3) of the Affordable Care Act amended section 1886(h)(7) of the Act to insert "or paragraph (8)" into paragraph (E), which, as amended, precludes administrative or judicial review "with respect to determinations made under

this paragraph, paragraph (8) * * *." (This sentence was subsequently amended by section 5506(e) as "this paragraph, paragraph (8), or paragraph (4)(H)(vi))." We believe that this amendment refers to the entirety of sections 1886(h)(7) and (h)(8) of the Act, respectively, which would include determinations regarding the FTE cap reductions, increases, whether a hospital meets the requirements during the 5-year "probationary" period, and finally, the redistribution of those positions if a hospital no longer meets those requirements. Further, we note that section 1886(h)(8)(B)(ii) of the Act states, "The Secretary may determine whether a hospital has met the requirements under this clause during such 5-year period *in such manner* and at such time *as the Secretary determines appropriate* * * *" (emphasis added). Therefore, we disagree with the first commenter and we believe that the preclusion of administrative and judicial review even applies to determinations made regarding whether a hospital meets the requirements in the 5-year "probationary" period; that is, whether the slots awarded to a hospital under section 1886(h)(8)(B)(i) of the Act are to be removed and redistributed due to failure to meet the requirements at section 1886(h)(8)(B)(ii) of the Act. However, because, as the second commenter points out, the Medicare cost reports are subject to appeal, a hospital could appeal its FTE count on a cost report occurring between July 1, 2011 and June 30, 2016. To the extent that this FTE count is at the center of a dispute as to whether the requirements at section 1886(h)(8)(B)(ii) of the Act are met, we do not believe that this should affect a final determination as to whether the requirements at section 1886(h)(8)(B)(ii) are actually met. As we clarified in this final rule, even though we are proposing that the Medicare contractors may make adjustments to a hospital's direct GME and IME payments as early as is feasible, it may be several years after June 30, 2016 before CMS determines the exact number of reductions, if any, that are applied to the FTE caps of hospitals that received additional slots, but that failed to meet the requirements under section 1886(h)(8)(B)(ii) of the Act * * *." This is because under normal audit work plans, it often takes several years from an initial submission of a cost report to final settlement. However, if the Notice of Program Reimbursement (NPR) is issued by the contractor to the hospital, final settling that cost report, and as part of that final settlement, the contractor determined that the hospital's primary care FTE count in that cost report was less than the primary care average, or that less than 75 percent of the hospital's FTE count was used to train primary care or general surgery residents, that determination is not subject to administrative or judicial review—it is a final determination. This determination that the requirements at section 1886(h)(8)(B)(ii) of the Act are not met, in turn, would trigger the determinations regarding the reduction and the redistribution of the awarded positions. These latter determinations are also not subject to administrative or judicial review. It is true that the cost report in which those determinations were made is appealable under normal procedures. Even if the outcome of the appeal, which could occur a number of years after the initial NPR, would be in favor of the hospital, raising its primary care FTE count in that year, for example, this would have no effect on the determination already made years before that the hospital did not meet the requirements at section 1886(h)(8)(B)(ii) of the Act. The outcome of the appeal could only affect IME and direct GME payment in that particular cost reporting year, but would not affect payments or FTE caps in subsequent cost reports.

After consideration of the public comments we received, we are clarifying that a hospital cannot use section 5503 slots for cap relief only; the hospital must use those cap slots to train more primary care or general surgery residents, or reduce its number of non-primary care residents, in accordance with the 75-percent threshold requirement. We also do not believe we have flexibility to adjust the number for the primary care average or the 75-percent threshold. Therefore, we are not adopting the commenter's request that a hospital has met the 75-percent requirement so long as the average number of residents the hospital added over the course of the 5 years is within the greater of 2 resident FTEs or 95 percent of the target number of primary care and general surgery residents. However, we believe we have the discretion to consider a hospital's performance over more than 1 year as to whether or not the primary care average and 75 percent threshold is met, although we believe we also maintain the authority to review each year during the 5 years independently as well. We are modifying our proposal accordingly.

We are also clearly stating in this final rule that it is within CMS' and the contractors' rights to adjust a hospital's IME and direct GME payments as early as is feasible within a cost report's submission and review cycle, and that we need not wait until final settlement to do so. Finally, we are clarifying that the determination of the primary care average is prescribed clearly in the law at section 1886(h)(8)(B)(ii)(I) of the Act as being based on "* * * the average number of full-time equivalent primary care residents (as so determined) during the three most recent cost reporting periods ending prior to the date of enactment of this paragraph" means the three most recent cost reporting periods submitted to the Medicare contractor by March 23, 2010.

d. No Administrative or Judicial Review

Section 5503(a)(3) of the Affordable Care Act amended section 1886(h)(7)(E) of the Act by adding "or paragraph (8)" such that section 1886(h)(7)(E) of the Act now specifies that "There shall be no administrative or judicial review under section 1869, 1878, or otherwise, with respect to determinations made under this paragraph or paragraph (8)" (and then further amended to include paragraph (4)(H)(vi)). As stated in the preceding section regarding reference cost reports that are under appeal, we believe the fact that Congress included this language clearly means that the Congress intended for our determination with regard to FTE resident cap reductions and redistributions under sections 1886(h)(8)(A) and (h)(8)(B) to be final, and not subject to appeal. Because of this statutory language, together with the requirement that all reductions and increases in FTE resident caps be made effective July 1, 2011, we do not believe it would be appropriate to allow hospitals (or CMS) to appeal determinations concerning the FTE cap reductions or the FTE cap increases) under section 1886(h)(8) of the Act. In addition, as indicated previously, we believe that Congress intended this provision to be implemented fairly, but efficiently, avoiding the delays and uncertainty that would be produced by an appeals process. Furthermore, we note that, as explained previously in this preamble, as was done under section 422 of Public Law 108–173, Medicare contractors will provide hospitals with a time-limited opportunity to review cap reduction determinations for possible technical errors before they are finalized.

We did not receive any public comments on this section, and we are finalizing our proposal accordingly.

The following are miscellaneous public comments we received on section 5503 and our responses to them.

Comment: Several commenters expressed general support for the redistribution of resident slots through section 5503. Many commenters agreed

that redistribution preference given to hospitals in a State whose resident-to-population ratio is within the lowest quartile and hospitals in the top 10 States/territories/districts in terms of primary care HPSA to population ratios is appropriate. One commenter wrote that "we believe the distribution of these unused medical education slots will help us maintain, even increase, the number of family practice physicians we can train." Another commenter considered these residency slot redistributions to be positive developments in the effort to improve the physician workforce shortage in rural areas. Although many commenters expressed general support for these policies, several commenters also mentioned that additional efforts will be necessary to meet the nationwide need for resident slots.

Response: We appreciate the commenters' support for our proposals.

Comment: One commenter asked that CMS clarify whether there is any relationship between the section 5503 redistribution program and the rules for counting residents for the IME teaching adjustments under the psychiatric or rehabilitation PPSs.

Response: Section 5503(a) amended section 1886(h) of the Act, which covers direct GME payments to hospitals paid under the IPPS or other hospital PPSs, which are the Inpatient Rehabilitation Facility (IRF) PPS, the Inpatient Psychiatric Facility (IPF) PPS, and the Long Term Care Hospital (LTCH) PPS. However, section 5503(b) amended section 1886(d)(5)(B)(v) of the Act for IPPS IME purposes. Therefore, the IME FTE cap reductions and increases under section 5503 only apply to "subsection (d)" IPPS hospitals. Section 5503 has no applicability to the IME teaching adjustments under the IRF PPS or the IPF PPS.

Comment: One commenter generally urged CMS to proceed with caution in the development of the final rule and to implement regulations that minimize, to the extent possible, the administrative burden associated with those requirements.

Response: We are sensitive to the documentation burdens which hospitals have, and despite the exemption of section 5503 from the Paperwork Reduction requirements, we have attempted to require documentation that is crucial for us to implement this provision in as fair and effective manner as possible.

CMS Evaluation Form

As Part of the Application for the Increase in a Hospital's FTE Cap(s) under Section 5503 of the Affordable Care Act

Directions: Please fill out the information below for each residency program for which the applicant hospital intends to use the increase in its FTE cap(s). The applicant hospital is responsible for complying with the other requirements listed in the CY 2011 Hospital Outpatient Prospective Payment System Final Rule in order to complete its application for the increase in its FTE cap(s) under section 5503 of the Affordable Care Act, Pub. L. 111-148.

NAME OF HOSPITAL: _____

MEDICARE PROVIDER NUMBER: _____

NAME OF MEDICARE CONTRACTOR: _____

NAME OF SPECIALTY TRAINING PROGRAM: _____

(Check one): □ Allopathic Program □ Osteopathic Program

NUMBER OF FTE SLOTS REQUESTED FOR PROGRAM:

Direct GME: _____ **IME:** _____

Section A: Demonstrated Likelihood of Filling the FTE Slots

(Place an "X" in the box for the applicable criterion and subcriterion.)

□ A1: Demonstrated Likelihood Criterion 1. The hospital is training residents in excess of its FTE resident cap(s), or does not have sufficient room under its current FTE cap(s), and the hospital intends to use the additional FTEs for a new residency program that it intends to start on or after July 1, 2011 (that is, a newly approved program that begins training residents at any point within the hospital's first three cost reporting periods beginning on or after July 1, 2011). Under this criterion, the hospital must select one of the following:

(1) Hospital will establish a newly approved residency program. (Under this selection, the hospital must check at least one of the following, if applicable):

□ Application for approval of the new residency program has been submitted to the ACGME, AOA, or the ABMS by January 21, 2011. (The hospital must attach a copy.)

□ The hospital has submitted an institutional review document or program information form concerning the new program in an application for approval of the new program by January 21, 2011. (The hospital must attach a copy.)

□ The hospital has received written correspondence from the ACGME, AOA, or ABMS acknowledging receipt of the application for the new program, or other types of communication from the accrediting bodies concerning the new program approval process (such as notification of site visit). (The hospital must attach a copy.)

□ The hospital may submit documentation demonstrating that it has made a commitment to start a new program.

(2) Hospital will likely fill the slots requested. (The hospital must select at least one of the following, if applicable.)

□ The hospital does not have sufficient room under its FTE cap, or is exceeding its FTE cap, and the hospital's existing residency programs had a combined resident fill rate of at least 85 percent in each of program years 2007 through 2009. (The hospital must attach documentation.)

□ The hospital does not have sufficient room under its FTE cap, or is exceeding its FTE cap, and the specialty program for which the hospital is applying has a resident fill rate either nationally, within the State, or within the CBSA in which the hospital is located, of at least 85 percent. (The hospital must attach documentation.)

□ The hospital is training residents in excess of its direct GME FTE cap, or IME FTE cap, or both. The hospital must submit a copy of the Medicare cost report that has been most recently submitted to the Medicare contractor by March 23, 2010, documenting on Worksheet E, Part A, Worksheet E-3, Part IV, and Worksheet E-3, Part VI, the resident counts and FTE resident caps for both direct GME and IME.

□ A2: Demonstrated Likelihood Criterion 2. The hospital is training residents in excess of its FTE cap(s), or does not have sufficient room under its FTE cap(s), and the hospital intends to use the additional FTEs to expand an existing residency training program within the hospital's first three cost reporting periods beginning on or after July 1, 2011.

(1) Hospital intends to expand an existing program. Under this selection, the hospital must check at least one of the following, if applicable:

□ The appropriate accrediting body (the ACGME, AOA, or ABMS) has approved the hospital's expansion of the number of FTE residents in the program. (The hospital must attach documentation.)

□ The American Osteopathic Association Residency Match Program has accepted or will be accepting the hospital's participation in the match for the existing program that will include additional resident slots in that residency training program. (The hospital must attach documentation.)

□ The hospital has submitted an institutional review document or program information form for the expansion of the existing residency training program by January 21, 2011. (The hospital must attach documentation.)

(2) Hospital will likely fill the slots of the expanded existing residency program. Under this selection, the hospital must check at least one of the following, if applicable:

□ The hospital does not have sufficient room under its FTE cap, or is exceeding its FTE cap, and the hospital has other previously established residency programs, with a resident fill rate of at least 85 percent in each of program years 2007 through 2009.) (The hospital must attach documentation.)

□ The hospital does not have sufficient room under its FTE cap, or is exceeding its FTE cap, and the hospital is expanding an existing program in a particular specialty with a resident fill rate either nationally, within the State, or within the CBSA in which the hospital is located, of at least 85 percent. (The hospital must attach documentation.)

□ The hospital is training residents in excess of its direct GME FTE cap, or IME FTE cap, or both. The hospital must submit a copy of the Medicare cost report that has been most recently submitted to the Medicare contractor by March 23, 2010, documenting on Worksheet E, Part A, Worksheet E-3, Part IV, and Worksheet E-3, Part VI, the resident counts and FTE resident caps for both direct GME and IME.

Section B. Level Priority Category

(Place an "X" in the appropriate box that is applicable to the level priority category that describes the applicant hospital.)

- *First Level Priority Category:* The hospital is in a State whose resident-to-population ratio is within the lowest quartile, AND it is an urban hospital that has or will have as of July 1, 2011, a rural training track.

- *Second Level Priority Category:* The hospital is in a State whose resident-to-population ratio is within the lowest quartile.
- *Third Level Priority Category:* The hospital is in a State whose Primary Care HPSA to population ratio is in the top 10 States, AND the hospital is an urban hospital that has or will have as of July 1, 2011, a rural training track.
- *Fourth Level Priority Category:* The hospital is in a State whose Primary Care HPSA to population ratio is in the top 10 States, OR the hospital is located in a rural area.

Section C. Evaluation Criteria

(Place an "X" in the box for each criterion that is appropriate for the applicant hospital and for the program for which the increase in the FTE cap is requested.)

- Evaluation Criterion One. *The hospital that is requesting the increase in its FTE resident cap(s) has a Medicare inpatient utilization over 60 percent, as reflected in at least two of the hospital's last three most recent audited cost reporting periods for which there is a settled cost report.* 5 POINTS.

- Evaluation Criterion Two. *The hospital will use additional slots to establish a new geriatrics residency program, or to add residents to an existing geriatrics program.* 5 POINTS.

- Evaluation Criterion Three. *The hospital will use additional slots to establish a new or expand an existing primary care program with a demonstrated focus on training residents to pursue careers in primary care, rather than in non-primary subspecialties of those primary care programs (for example, the hospital has an internal medicine program with a designated primary care track).* 3 POINTS.

- Evaluation Criterion Four. *The hospital will use all the additional slots to establish a new or expand an existing primary care residency program or general surgery program*. – 5 POINTS.

- Evaluation Criterion Five. *The hospital is located in a Primary Care HPSA.* 2 POINTS.

• Evaluation Criterion Six. *The hospital is in a rural area (as defined under section 1886(d)(2)(D)(ii) of the Act) and is or will be on or after July 1, 2011, a training site for a rural track residency program (as specified under §413.79(k)), but is unable to count all of the FTE residents training in the rural track because the rural hospital's FTE cap is lower than its unweighted count of allopathic or osteopathic FTE residents as of portions of cost reporting periods on or after July 1, 2011.* 1 POINT.

• Evaluation Criterion Seven. *The hospital is requesting slots to expand an existing program(s) for which the hospital can demonstrate that more than 50 percent of residents completing the program(s) go on to practice in a rural area or a Primary Care HPSA or a Medically Underserved Area (MUA)* 1 POINT.

• Evaluation Criterion Eight. *The hospital is requesting slots to expand an existing emergency medicine program in which the residents train in Primary Care HPSAs*. 1 POINT.

BILLING CODE 4120–01–C

Application Process and CMS Central Office and Regional Office Mailing Addresses for Receiving Increases in FTE Resident Caps

In order for hospitals to be considered for increases in their FTE resident caps, each qualifying hospital must submit a timely application. The following information must be submitted on applications to receive an increase in FTE resident caps:

• The name and Medicare provider number of the hospital.

• The name of the Medicare contractor to which the hospital submits its Medicare cost report.

• The total number of requested FTE resident slots for direct GME or IME, or both, up to 75 direct GME FTE and 75 IME FTE per hospital.

• A completed copy of the CMS Evaluation Form for each residency program for which the hospital intends to use the requested increase in FTE residents.

• Source documentation to support the assertions made by the hospital on the CMS Evaluation Form.

• FTE resident counts for direct GME and IME and FTE resident caps for direct GME and IME reported by the hospital in the most recent cost report submitted to the Medicare contractor by March 23, 2010. (Include copies of Worksheets E, Part A, E–3, Part IV, and if a hospital received an increase to its FTE cap(s) under section 422 of the MMA, a copy of E–3, Part VI).

• As part of its application, for purposes of computing the primary care average under section 1886(h)(8)(B)(ii)(I) of the Affordable Care Act, the hospital must include the documentation that it used to arrive at its direct GME and IME primary care FTE counts, including a copy of Worksheet E–3, Part IV for direct GME, and if the hospital has an OB/GYN program, the rotation schedules corresponding to the three most recent cost reporting periods ending prior to March 23, 2010 (and submitted to the Medicare contractor by March 23, 2010) for OB/GYN, and the rotation schedules for all primary care residency programs used to establish the IME primary care FTE count corresponding to the three most recent cost reporting periods ending prior to March 23, 2010.

• An attestation, signed and dated by an officer or administrator of the hospital who signs the hospital's Medicare cost report, of the following information:

"I hereby certify that I understand that misrepresentation or falsification of any information contained in this application may be punishable by criminal, civil, and administrative action, fine and/or imprisonment under federal law. Furthermore, I understand that if services identified in this application were provided or procured through payment directly or indirectly of a kickback or were otherwise illegal, criminal, civil, and administrative action, fines and/or imprisonment may result. I also certify that, to the best of my knowledge and belief, it is a true, correct, and complete application prepared from the books and records of the hospital in accordance with applicable instructions, except as noted. I further certify that I am familiar with the laws and regulations regarding Medicare payment to hospitals for the training of interns and residents."

The completed application and supporting documentation (as described above) must be submitted to the CMS Central Office and the CMS Regional Office for the region in which the applicant hospital is located. The application must be received on or before January 21, 2011. The addresses of the CMS Central Office and Regional Offices are listed below.

CMS Central and CMS Regional Office Mailing Addresses for Applications for Increases in FTE Resident Caps

Central Office

Centers for Medicare and Medicaid Services (CMS), Director, Division of Acute Care, 7500 Security Boulevard, Mail Stop C4–08–06, Baltimore, Maryland 21244, (410) 786–4548.

Region I (Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont)

Centers for Medicare and Medicaid Services (CMS), Associate Regional Administrator, Division of Financial Management and Fee for Service Operations, Region I, JFK Federal Building, Room 23275, Boston, MA 02203, Phone: (617) 565–1331.

Region II (New York, New Jersey, U.S. Virgin Islands, and Puerto Rico)

Centers for Medicare and Medicaid Services (CMS), Associate Regional Administrator, Division of Financial Management and Fee for Service Operations, Region II, 26 Federal Plaza, 38th Floor, New York, NY 10278, Phone: (212) 616–2545.

Region III (Delaware, Maryland, Pennsylvania, Virginia and West Virginia, and the District of Columbia)

Centers for Medicare and Medicaid Services (CMS), Associate Regional Administrator, Division of Financial Management and Fee for Service Operations, Region III, Public Ledger

Building, Suite 216, 150 South Independence Mall West, Philadelphia, PA 19106, Phone: (215) 861–4140.

Region IV (Alabama, North Carolina, South Carolina, Florida, Georgia, Kentucky, Mississippi, and Tennessee)

Centers for Medicare and Medicaid Services (CMS), Associate Regional Administrator, Division of Financial Management and Fee for Service Operations, Region IV, Atlanta Federal Center, 61 Forsyth Street, SW., Suite 4T20, Atlanta, GA 30303–8909, Phone: (404) 562–7300.

Region V (Illinois, Indiana, Michigan, Minnesota, Ohio, and Wisconsin)

Centers for Medicare and Medicaid Services (CMS), Associate Regional Administrator, Division of Financial Management and Fee for Service Operations, Region V, 233 North Michigan Avenue, Suite 600, Chicago, IL 60601, Phone: (312) 886–6432.

Region VI (Arkansas, Louisiana, New Mexico, Oklahoma, and Texas)

Centers for Medicare and Medicaid Services (CMS), Associate Regional Administrator, Division of Financial Management and Fee for Service Operations, Region VI, 1301 Young Street, Suite 714, Dallas, TX 75202, Phone: (214) 767–6423.

Region VII (Iowa, Kansas, Missouri, and Nebraska)

Centers for Medicare and Medicaid Services (CMS), Associate Regional Administrator, Division of Financial Management and Fee for Service Operations, Region VII, Richard Bolling Federal Building, Room 235, 601 East 12th Street, Kansas City, MO 64106, (816) 564–1843.

Region VIII (Colorado, Montana, North Dakota, South Dakota, Utah and Wyoming)

Centers for Medicare and Medicaid Services (CMS), Associate Regional Administrator, Division of Financial Management and Fee for Service Operations, Region VIII, Colorado State Bank Building, 1600 Broadway, Suite 700, Denver, CO 80202, Phone: (303) 844–2111.

Region IX (Arizona, California, Hawaii, and Nevada and Territories of American Samoa, Guam and the Commonwealth of the Northern Mariana Islands)

Centers for Medicare and Medicaid Services (CMS), Associate Regional Administrator, Division of Financial Management and Fee for Service Operations, Region IX, 90 7th Street, Suite 5–300 (SW), San Francisco, CA 94103–6708, Phone: (415) 744–3501.

Region X (Alaska, Idaho, Oregon, and Washington)

E. Preservation of Resident Cap Positions From Closed Hospitals (Section 5506 of the Affordable Care Act)

1. Background

As we explain in section XXI.A. of this preamble, Medicare makes both direct GME and IME payments to hospitals that train residents in approved medical residency training programs. Direct GME payments are made in accordance with section 1886(h) of the Act, based generally on hospital-specific PRAs, the number of FTE residents a hospital trains, and the hospital's Medicare patient share. IME payments are made in accordance with section 1886(d)(5)(B) of the Act, based generally on the ratio of the hospital's FTE residents to the number of hospital beds. Accordingly, the calculation of both direct GME and IME payments is affected by the number of FTE residents that a hospital is allowed to count; generally, the greater the number of FTE residents a hospital counts, the greater the amount of Medicare direct GME and IME payments the hospital will receive. In an attempt to end the implicit incentive for hospitals to increase the number of FTE residents, Congress instituted a cap on the number of allopathic and osteopathic residents a hospital is allowed to count for direct GME and IME purposes under the provisions of section 1886(h)(4)(F) of the Act for direct GME and section 1886(d)(5)(B)(v) of the Act for IME. Dental and podiatric residents were not included in this statutorily mandated cap. For most hospitals, the limit, or cap, is the unweighted number of allopathic and osteopathic FTE residents training in the hospital's most recent cost reporting period ending on or before December 31, 1996. Thus, each teaching hospital's FTE resident cap is unique to the number of FTE residents that it trained in the hospital's most recent cost reporting period ending on or before December 31, 1996.

Under existing regulations at § 413.79(h) for direct GME and § 412.105(f)(1)(ix) for IME, a hospital that is training FTE residents at or in excess of its FTE resident caps and takes in residents displaced by the closure of another teaching hospital may receive a temporary increase to its FTE residents caps so that it may receive direct GME and IME payment associated with those displaced FTE residents. However, those temporary FTE resident cap increases are associated with those specific displaced FTE residents, and the increases expire as those displaced residents complete their training program. Thus, if a teaching hospital closes, its direct GME and IME FTE resident cap slots would be "lost," because those cap slots are associated with a specific hospital's Medicare provider agreement, which would be retired upon the hospital's closure. The closure of a teaching hospital, particularly if it is a large academic medical center, could mean not only the displacement of hundreds of residents, but also the permanent loss of hundreds of Medicare-funded residency training slots and a sophisticated GME infrastructure that could take many years to rebuild, threatening the availability of health care services in a community. Section 5506 of the Affordable Care Act addresses this situation by amending section 1886(h)(4)(H) of the Act to add a new clause (vi) that instructs the Secretary to establish a process by regulation under which, in the event a teaching hospital closes, the Secretary will permanently increase the FTE resident caps for hospitals that meet certain criteria by the number of FTE resident positions in the closed hospital's training programs.

Section 5506 of the Affordable Care Act specifically instructs the Secretary to increase the FTE resident caps for other hospitals based upon the FTE resident positions in teaching hospitals that closed "on or after a date that is 2 years before the date of enactment" (that is, March 23, 2008). Although certain of the FTE cap increases granted pursuant to section 5506 will be based on hospital closures that occurred prior to this notice and comment rulemaking procedure, we indicated in the August 3, 2010 proposed rule that the process we proposed to establish in the final rule would also be used for all future teaching hospital closures. We indicated that we were in the process of instructing the Medicare contractors to notify us of every teaching hospital that has closed since March 23, 2008, and of the direct GME and IME FTE caps for each of those closed hospitals. We plan to use this information to determine how many slots are currently available for increases to other hospitals' FTE resident caps.

We note that section 1886(h)(4)(H)(vi)(IV) of the Act, as

added by section 5506(a) of the Affordable Care Act, states that "The aggregate number of increases in the otherwise applicable resident limits for the hospitals under this clause shall be equal to the number of resident positions in the approved medical residency programs that closed on or after" March 23, 2008. For purposes of implementing this section 1886(h)(4)(H)(vi)(IV) of the Act, in the August 3, 2010 proposed rule (75 FR 46421), we proposed to interpret "the number of resident positions" to mean the number that is equal to the IME and direct GME FTE resident caps of a hospital that closed, or will close. We do not believe the intent of this provision is to distribute and pay for more FTE resident slots than the amount equal to a closed hospital's IME and direct GME FTE resident caps, in the instance where a closed hospital was training more FTE residents than its FTE resident caps. Further, in the situation where a closed hospital was training FTE residents below its caps, we believe that for the sake of ensuring that a community could retain up to its full training strength, we believe it is appropriate to distribute, not the actual number of slots the closed hospital had been training prior to its closure, but the number of FTE resident slots equal to the IME and direct GME FTE caps of the closed hospital.

2. Definition of a "Closed Hospital"

Section 1886(h)(4)(H)(vi) of the Act, as added by section 5506(a) of the Affordable Care Act, states that "the Secretary shall, by regulation, establish a process under which, in the case where a hospital (other than a hospital described in clause (v)) with an approved medical residency program *closes* on or after" March 23, 2008, the Secretary shall increase the FTE resident caps of other hospitals accordingly (emphasis added). Under existing regulations at § 489.52 and § 413.79(h), "closure of a hospital" means the hospital terminates its Medicare provider agreement. In the August 3, 2010 proposed rule (75 FR 46421 and 46422), we proposed to define a "closed teaching hospital" for purposes of section 5506 in a similar manner, but would also specify that the FTE resident cap slots of the hospital that closed no longer exist as part of any other hospital's permanent FTE resident cap. Thus, we proposed that this provision would not apply to hospitals that declare bankruptcy but are still participating under the same Medicare provider agreement, nor would it apply to teaching hospitals that remain open, but close one or more residency programs. It also would not apply to mergers, because in the case of a merger, the Medicare provider agreement of one hospital is subsumed into the provider agreement of the surviving provider; no provider agreement is retired, even if operations at one facility are scaled back or ceased.

However, we proposed that the proposed revised definition of hospital closure for purposes of implementing section 5506 *would* apply in the case of acquisitions, where the new owner voluntarily terminates the Medicare provider agreement of the hospital it purchased by rejecting assignment of the previous owners' provider agreement, thus abdicating the FTE resident cap slots associated with that provider agreement, even if the new owner will continue to operate the hospital exactly as it had been operated before the acquisition (that is, makes no changes to the bed size, infrastructure, services, and GME programs). We believe this is appropriate because section 5506 of the Affordable Care Act specifically addresses hospital "closure" and ensures preservation of the FTE cap slots within a community when a teaching hospital does "close," based on specified criteria for redistributing the slots from the closed hospital to increase the FTE caps for other hospitals. However, as we explain further below, it is possible for the new hospital formed in an acquisition to receive preference in receiving an increase to its FTE resident caps based on redistributed slots from the closed hospital that it acquired.

Section 1886(h)(4)(H)(vi) of the Act, as added by section 5506(a), also states that "the Secretary shall, by regulation, establish a process under which, in the case where a hospital *(other than a hospital described in clause (v))* with an approved medical residency program closes * * *" (emphasis added). A hospital described in section 1886(h)(4)(H)(v) of the Act is an entity that enters into a provider agreement pursuant to section 1866(a) of the Act to provide hospital services on the same physical site previously used by Medicare Provider No. 05–0578. Accordingly, we proposed not to redistribute any FTE cap slots associated with Medicare Provider Number 05–0578.

Comment: One commenter noted that CMS proposed to define a closed teaching hospital for purposes of section 5506 as a hospital (a) that terminates its Medicare provider agreement, and (b) whose cap slots no longer exist as part of any other hospital's permanent FTE resident cap. The commenter asked CMS to clarify situations in which a hospital's Medicare provider agreement would be terminated but whose slots would still exist as part of another hospital's permanent FTE resident cap. The commenter also observed that the existing regulations text regarding the definition of hospital closure at §§ 413.79(h) and 489.52 do not indicate the concept that caps of a closed teaching hospital no longer exist as part of another hospital's permanent FTE resident cap.

Another commenter noted the provision authorizing the redistribution of residency slots would apply, however, in the case of an acquisition wherein the new owner voluntarily terminates the provider agreement of the hospital it purchased, "even if the new owner will continue to operate the hospital exactly as it had been operated before the acquisition (that is, make no changes to the bed size, infrastructure, services, and GME programs)." The commenter understood that CMS would propose this because "(1) CMS does not view this situation as a merger of two hospitals under its current policy, and (2) CMS has proposed a separate process whereby this situation could be addressed (within Ranking Criterion #1)." The commenter requested confirmation of its understanding of this policy proposal. Another commenter also commented on this issue and appreciates the extension of the definition of a closed hospital to include acquisitions.

Response: We regret that there was confusion regarding the definition of a closed hospital for the purposes of implementing section 5506. By specifying that "the FTE resident cap slots of the hospital that closed no longer exist as part of any other hospital's permanent FTE resident caps" in the August 3, 2010 proposed rule (75 FR 46422), we proposed to emphasize that if slots were permanently transferred to another provider and they continue to exist, section 5506 would not apply. An example of such a situation would be a merger wherein the Medicare provider agreement of one hospital is subsumed into the provider agreement of the surviving provider. In this example, no provider agreement is terminated, and the FTE resident caps also would be subsumed permanently into the provider agreement of the surviving provider. Thus, the purpose of section 5506 is to ensure that slots that are not already part of another hospital's permanent cap are not lost, but rather will be redistributed to qualifying hospitals.

The second commenter's understanding of our proposal regarding acquisitions is correct. We do include

acquisitions in a case in which the new owner terminates the provider agreement of the hospital it purchased in the definition of hospital closure because, in this case, a Medicare provider agreement is terminated, thus releasing the FTE resident cap slots associated with that provider agreement. In addition, we are clarifying that for a hospital that closed due to an acquisition on or after March 23, 2008, and for which CMS has not given those slots to another provider by March 23, 2010, that hospital's slots are governed by section 5506 and CMS' final policies implementing this section.

Comment: One commenter requested that CMS provide additional clarification regarding the definition of a closed hospital. Specifically, the commenter asked: "If the FTEs go permanently to another hospital because of a provision in an affiliation agreement, is the hospital considered closed?" The commenter believed that, in these instances, the hospital is not considered closed, but requested clarification from CMS.

Response: In general, a hospital is not closed unless the hospital's Medicare provider agreement is terminated. With regard to transfers of FTE caps under Medicare GME affiliation agreements, in other instances, we have clarified that hospitals cannot use Medicare GME affiliation agreements to permanently transfer FTE caps from one hospital to another, regardless of whether the hospital transferring the FTE cap slots remains open or closes. As described in the August 1, 2002 final rule (67 FR 50076), effective for Medicare GME affiliation agreements that terminate after October 1, 2002 for any reason, including closure of a participating hospital, FTEs cannot be permanently transferred to another participating hospital even if this circumstance is outlined as a provision in the Medicare GME affiliation agreement. Rather, if a hospital withdraws from the agreement, or if the agreement terminates for any reason, the hospitals participating in the Medicare GME affiliation agreement would revert to their original FTE caps prior to entering into the Medicare GME affiliation agreement. FTE cap transfers occurring under Medicare GME affiliation agreements are temporary and are to be used solely for the purpose of cross-training residents among hospitals that share residency training programs (as described in the regulations at §§ 413.75(b) and 413.79(f).

3. Priority for Hospitals in Certain Areas

Section 1886(h)(4)(H)(vi)(II), as added by section 5506(a) of the Affordable Care Act, specifies that the Secretary shall distribute the FTE cap increases in the following priority order, "with preference given within each category to hospitals that are members of the same affiliated group" (as defined by the Secretary) as the closed hospital:

- First, to hospitals located in the same core-based statistical area (CBSA) as, or in a CBSA contiguous to, the hospital that closed.
- Second, to hospitals located in the same State as the closed hospital.
- Third, to hospitals located in the same region as the hospital that closed.
- Fourth, if the slots have not yet been fully distributed, to qualifying hospitals in accordance with the criteria established under section 5503 ("Distribution of Additional Residency Positions") of the Affordable Care Act.

First, in the August 3, 2010 proposed rule (75 FR 46422), we proposed to use the same pre-reclassification CBSAs that are used for wage index purposes under the IPPS in determining which hospitals are located in the same or contiguous CBSAs as the CBSA in which the hospital that closed was located, without regard to any reclassifications made under the provisions of §§ 412.102, 412.103, 412.230, 412.232, 412.234, and 412.235 of the regulations. Second, we proposed to define "State" in the second priority category to include Puerto Rico and the District of Columbia. Third, we proposed to define "region" in the third priority category as Census Region, consistent with the use of the term elsewhere in the GME regulations. (The term is used for purposes of establishing direct GME PRAs of certain new teaching hospitals at § 413.77(e)(1)(iii).) Fourth, as specified in the fourth priority category, we proposed to employ the criteria for redistribution of residency positions described in section 5503 of the Affordable Care Act, as implemented in the proposed revised regulations at § 413.79(n), should there be any slots not redistributed under the first through third priority categories.

Comment: One commenter supported CMS' proposal to define "region" as census region, consistent with the use of the term elsewhere in the GME regulations. The commenter stated that if CMS elects to use a different definition of "region," the commenter would support defining "region" consistent with the CMS administrative regions (for example, CMS Regions I through X).

Response: We appreciate the commenter's support. We are adopting this proposal as final.

With regard to members of the same Medicare GME affiliated group, we proposed to give priority within each category to hospitals that are members of the same Medicare GME affiliated group as the hospital that closed. A Medicare GME affiliated group, as defined at § 413.75(b), consists of hospitals that enter into a Medicare GME affiliation agreement, also as defined at § 413.75(b), for the purpose of cross-training residents and that, under the terms of the agreement, aggregate and make temporary adjustments to their respective individual FTE resident caps. To provide flexibility to hospitals that have affiliated with the hospital that closed, we proposed to refer to the most recent Medicare GME affiliation agreement of which the closed hospital was a member. Hospitals that were listed as participants of the Medicare GME affiliated group on that most recent Medicare GME affiliation agreement before the closure of the hospital will receive preference in receiving FTE cap increases based on the redistributed slots.

Comment: One commenter noted that, although the commenter understood that CMS is bound by the statute, it suggested that less emphasis be placed on whether a hospital was in an affiliation agreement in the distribution of residency slots resulting from a hospital closure. Alternatively, the commenter suggested that CMS prioritize increasing the caps of applying hospitals that are currently training residents over their caps and, therefore, are training residents that are not funded by Medicare. The commenter did not support the proposal to give preference to an applying hospital based solely on an affiliation that no longer exists with the closed hospital. The commenter posited that if less emphasis was placed on affiliation agreements, there could potentially be more opportunity for new or expanded programs in needed areas such as primary care to emerge as a result of increased caps. The commenter further stated that an applying hospital that had a previous affiliation with a closed hospital could use the increase in its FTE resident cap to train residents in a specialty for which CMS had not identified a need. To prevent this, the commenter suggested that hospitals applying under Ranking Criterion Two should be further ranked based on whether they are also requesting slots for use in specialties for which CMS has identified a need. For example, a hospital that is applying under proposed Ranking Criterion Six to start or expand a primary care program and was also part of an affiliation agreement with the closed hospital should be ranked higher than a hospital that is

applying under proposed Ranking Criterion Six and was not part of the same affiliated group as the closed hospital. However, both hospitals should be ranked higher than a hospital that had been a member of an affiliated group with the closed hospital but is requesting slots to start a non-primary care program (other than general surgery).

Response: While we appreciate the commenter's suggestions, the commenter is correct that we are bound by the statute and cannot consider the suggestions for implementation. The statute does not allow us to ignore a hospital's affiliated status in determining whether the hospital qualifies for a cap increase under section 5506. As such, a hospital that was part of a Medicare GME affiliated group and received slots from the closed hospital would be ranked under Ranking Criterion Two, ahead of a hospital that was not part of the same Medicare GME affiliated group as the closed hospital. We further believe this is appropriate given that a primary consideration under section 5506 is continuity of training programs. Therefore, a hospital that is requesting slots because it seamlessly assumed a program from the closed hospital, even if that program is in a nonprimary care specialty, that hospital would qualify under a higher Ranking Criterion than would another hospital that is requesting the slots to start a new primary care program.

4. Application Process

In the August 3, 2010 proposed rule (75 FR 46422), we proposed to establish an application process for hospitals to apply to CMS to receive an increase in FTE caps based on slots from closed hospitals. Section 5506 of the Affordable Care Act did not specify an effective date or an application deadline for hospitals to request an increase to their caps when a hospital closes. Accordingly, with respect to the first application process to be implemented for section 1886(h)(4)(H)(vi) of the Act, as added by section 5506(a) of the Affordable Care Act, and which includes all teaching hospital closures back to March 23, 2008, we proposed that the application deadline would be January 1, 2011. For future teaching hospital closures, we proposed that we would inform the public through an appropriate medium that increases to hospitals' FTE resident caps are available for redistribution due to the closure of a teaching hospital, and the application deadline would be 4 months following the issuance of that notice to the public.

Comment: Commenters noted that CMS proposed an application deadline for distribution of slots under section 5506 of January 1, 2011, for hospitals that closed on or after March 23, 2008, and that for future teaching hospital closures, CMS proposed that hospitals will have 4 months after CMS notifies the public that slots are available to submit an application for those slots. The commenters asked that CMS clarify which deadline will apply to hospitals that close during the comment period between publication of the proposed rule and the final rule. Two commenters encouraged CMS to consider teaching hospitals that closed at any point after publication of the proposed rule to fall into CMS' second category, for which CMS would provide notice and a future application deadline.

Some commenters were concerned that the proposed application deadlines, particularly the first one for January 1, 2011, are too soon. They pointed out that a hospital's decision to take on displaced residents permanently may depend on multiple factors, and receiving ACGME approval for permanent resident positions is also extremely time-consuming. One commenter recognized that hospitals wish for the distribution of these slots to occur as quickly as possible, yet the commenter believed that April 1, 2011, would be a more realistic deadline than January 1, 2011, for the initial set of applications. However, another commenter agreed with the proposed deadline of January 1, 2011.

Response: We agree with the suggestion that any closures after August 3, 2010, the publication date of the proposed rule, should be part of a second hospital closure process for which CMS will send out a separate notice. In addition, we agree that to allow all affected parties sufficient time to gather the documentation necessary to complete and submit an application for slots from a closed hospital, the application date for requesting slots from hospitals that have closed between March 23, 2008 through August 3, 2010, should be extended to April 1, 2011. Therefore, in this final rule, we are establishing the application deadline for receipt of slots from hospitals that closed between March 23, 2008, through August 3, 2010, as April 1, 2011. Hospitals that close at any point after publication of the proposed rule, that is, August 3, 2010, will fall into the second category, for which we will provide separate notice with a future application deadline.

In addition, as the commenters noted, since receiving approval for permanent resident positions is very time consuming, in order to ease the administrative burden on hospitals, similar to the change we made in this final rule under the Demonstrated Likelihood Criterion 1 for section 5503, we are adding to the Demonstrated Likelihood Criteria for section 5506 in this final rule that the hospital may submit documentation demonstrating that it has made a commitment to start a new program or take over a program(s) from the closed hospital. One example of such a commitment would be for the hospital to provide the minutes from the meeting at which the hospital's GME Committee gave approval for the hospital to proceed with the process of applying to the accrediting agency for approval to start a new program.

Comment: One commenter stated that because hospitals interested in applying for resident cap slots under this provision must be put on notice of all slots that will be available through the closed hospital resident slot preservation program, CMS would accomplish this most effectively by publishing in the final rule a list of all hospitals that closed on or after March 23, 2008. In publishing this list, the commenter suggested that CMS also indicate how many cap slots are available from the hospital's 1996 cap versus how many cap slots are available from the section 422 redistribution program. Another commenter also suggested that, for future hospital closures, CMS publish a notice within 60 days from the effective date of the termination of the closed hospital's Medicare provider number.

Response: We agree with the commenter's request and have included at the end of this section a list of teaching hospital closures on or after March 23, 2008 through August 3, 2010, along with their 1996 FTE caps and section 422 caps as applicable. We also appreciate the commenter's suggestion to publish a notice within 60 days from the effective date of the termination of the closed hospital's Medicare provider agreement for future hospital closures. We will publish future closure notices as soon as possible. However, we acknowledge that, in certain cases, due to various circumstances, publication within 60 days may not always be achievable. Therefore, we will not be adopting the requirement to publish a notice within 60 days from the effective date of the termination of the closed hospital's Medicare provider agreement for future hospital closures.

After consideration of the public comments we received, in this final rule, we are establishing the application deadline for receipt of slots from hospitals that closed between March 23,

2008 through August 3, 2010, as April 1, 2011. Hospitals that close at any point after publication of the proposed rule, that is, August 3, 2010, will fall into the second category, for which we will provide separate notice with a future application deadline.

5. Ranking Criteria

Unlike the application process for FTE cap increases under section 1886(h)(8) of the Act as added by section 5503 of the Affordable Care Act, we did not propose to establish a "point" system to distinguish between hospitals within each of the first three priority categories. Rather, within each of the three first statutory priority categories in section XXI.E.3. of this preamble (that is, same or contiguous CBSAs, same State, and same Region), in the August 3, 2010 proposed rule (75 FR 46422), we proposed to rank categories in which we would assign slots *first* to hospitals that fall within the first ranking category *before* assigning slots to those hospitals that fall within the second ranking category, and would assign slots to those hospitals that fall within the second ranking category *before* assigning slots to hospitals in the third ranking category, and so forth. We did not propose to use these ranking categories within the fourth priority category because, under that fourth priority category, the Secretary would use the process established under section 5503 for section 1886(h)(8) of the Act. In order to maintain stability in existing GME programs, these proposed ranking categories generally give preference to applying hospitals that demonstrate a commitment to continue training residents in the same programs that the closed hospital operated, or that had a training relationship with the closed hospital (such as a Medicare GME affiliation agreement).

- *Ranking Criterion One. The applying hospital is requesting the increase in its FTE resident cap(s) because it is assuming (or assumed) an entire program (or programs) from the hospital that closed, and the applying hospital is continuing to operate the program(s) exactly as it had been operated by the hospital that closed (that is, same residents, same program director, and same (or many of the same) teaching staff).* We proposed this ranking criterion because we understand that there are situations where, when a hospital is acquired and its provider agreement is terminated and a new provider agreement is established in the place of the old one, the new formed "acquiring" hospital continues to operate the GME programs seamlessly and in the same manner as under the previous provider agreement. If this situation occurs, we believe the new hospital with the new provider agreement is demonstrating a strong commitment to not only maintain the GME programs in the community for the long term (that is, continuity), but to also allow the residents that were at the hospital when the change in provider agreement occurred to continue to train there, such that no residents are displaced and no training is interrupted.

Alternatively, it is possible that perhaps a year or more prior to a hospital's closure, the hospital closed some or all of its residency programs, and another hospital assumed an entire program (or programs) at the time of the residency program's closure, and the applying hospital has continued to operate that program seamlessly, as it had been operated at the hospital that ultimately closed. Because the applying hospital has also demonstrated a strong commitment to continuity of the residency program(s) in the community by assuming the program(s) even prior to the other hospital's closure, we proposed that the applying hospital would be categorized in Ranking Criterion One.

- *Ranking Criterion Two. The applying hospital was listed as a participant of a Medicare GME affiliated group on the most recent Medicare GME affiliation agreement of which the closed hospital was a member before the hospital closed, and under the terms of that Medicare GME affiliation agreement, the applying hospital received slots from the hospital that closed, and the applying hospital will use the additional slots to continue to train at least the number of FTE residents it had trained under the terms of the Medicare GME affiliation agreement.* We proposed this ranking criterion because section 1886(h)(4)(H)(vi) of the Act, as added by section 5506(a) of the Affordable Care Act, directs the Secretary to give preference to hospitals that are members of the same affiliated group as the hospital that closed. We believe that, generally, if the applying hospital was affiliated to *receive* slots from the hospital that closed, then the applying hospital was relying on that number of FTE resident slots that it received in order to maintain its fair share of the cross-training of the residents in the jointly operated programs. In the absence of those slots received from the closed hospital, the applying hospital may not be able to continue training that number of FTE residents, and those same residents would not only be displaced from the closed hospital, but might essentially become "displaced" from the affiliated hospitals in which they were used to doing a portion of their training. Accordingly, we proposed this ranking criterion to allow hospitals that were affiliated with the closed hospitals to at least maintain their fair share of the training of the residents in the programs that they had jointly operated with the closed hospital. We note that we proposed this ranking criterion regarding affiliated hospitals as second, after the first ranking criterion regarding applying hospitals that assume an entire program or programs from the closed hospital because, even though section 5506 of the Affordable Care Act directs the Secretary to give preference to members of the same affiliated group, we believe that a hospital that assumes the responsibility for an entire program or programs demonstrates a commitment to maintain the programs to an even greater degree than does a hospital that was affiliated with the hospital that closed and may only be maintaining a portion of the residency program or programs.

- *Ranking Criterion Three. The applying hospital took in residents displaced by the closure of the hospital, but is not assuming an entire program or programs, and will use the additional slots to continue training residents in the same programs as the displaced residents, even after those displaced residents complete their training (that is, the applying hospital is permanently expanding its own existing programs).* Similar to Ranking Criterion Two, hospitals fitting into Ranking Criterion Three also demonstrate a commitment to protect residents displaced by a hospital's closure, and to ensure that there is a degree of continuity in the community with respect to the particular training program or programs that the closed hospital operated. However, because an applying hospital fitting into this category was not part of the same Medicare GME affiliated group as the closed hospital, we proposed that this category would be ranked as third, below Ranking Criterion Two which relates to hospitals that were members of the same affiliated group as the closed hospital.

We proposed that the next five proposed ranking criteria would apply in the instance where there are still slots available from the closed hospital after distributing slots to hospitals falling within the first three ranking criteria. Thus, hospitals fitting into proposed Ranking Criteria Four through Eight would not fit into proposed Ranking Criteria One, Two, or Three, but they can demonstrate that they will use the slots in a manner that is consistent with

current Medicare policy goals, as indicated in section 5503 of the Affordable Care Act, such as using the slots for a geriatrics or for other primary care residency programs, or for a general surgery residency program.

- *Ranking Criterion Four. The applying hospital does not fit into Ranking Criteria One, Two, or Three, and will use additional slots to establish a new or expand an existing geriatrics residency program.*
- *Ranking Criterion Five. The applying hospital does not fit into Ranking Criteria One, Two, or Three, is located in a Primary Care HPSA, and will use all the additional slots to establish a new or expand an existing primary care residency program.*
- *Ranking Criterion Six.* The applying hospital does not fit into Ranking Criteria One, Two, or Three, and will use all the additional slots to establish a new or expand an existing primary care residency program.
- *Ranking Criterion Seven.* The applying hospital does not fit into Ranking Criteria One, Two, or Three, and will use all the additional slots to establish a new or expand an existing general surgery residency program.
- *Ranking Criterion Eight.* The applying hospital does not fit into Ranking Criteria One through Seven.

Comments on Ranking Criterion One

Comment: Several commenters generally supported CMS' proposal to prioritize the distribution of resident slots to applying hospitals that assume and seamlessly continue to operate a closed hospital's entire program. However, the commenters also noted that additional efforts must be made in order to meet the nationwide need for residency slots.

Response: We appreciate the commenters' support for the proposal to prioritize the distribution of resident slots to applying hospitals that assume and seamlessly continue to operate a closed hospital's entire program. Any additional efforts to address the commenters' stated need for additional residency slots would need to be addressed by Congress as a legislative change affecting hospitals' existing caps.

Comment: One commenter stated that, although it was appreciative of CMS' attempts to create a mechanism for the redistribution of residency slots from closed hospitals, the proposed priority ranking criteria may be too restrictive for many teaching hospitals to achieve. The commenter asked CMS to consider the ability of current GME programs that are able to meet critical primary care needs as a high priority during the application process.

Response: We believe we have developed a system to distribute slots from closed hospitals that will be administratively achievable and that will primarily promote the continuity of existing programs. We also recognize the importance of training primary care physicians, and we have included Ranking Criteria which reflect this accordingly.

Comment: One commenter observed that CMS included two types of scenarios in which an applicant hospital would be categorized within Ranking Criterion One: a situation in which a closed teaching hospital is acquired by another hospital that continues to train all residents from the program on the same site; and a situation in which a hospital closes some or all of its residency programs a year or more prior to the hospital's closure, and those programs are assumed by another hospital at a different site. The commenter agreed that hospitals assuming residency programs under both of these scenarios should be entitled to the preferential treatment of Ranking Criterion One, but believed that CMS inadvertently omitted a third example of when this first ranking criterion would apply. That is, the commenter believed that a hospital should also be eligible for Ranking Criterion One if it is located on a site that is different from the closed hospital, and assumes an entire program at the time the hospital closes (not a year or more prior to the hospital's closure). The commenter requested that CMS clarify that this third scenario would fit into Ranking Criterion One as well.

Response: The commenter raises a good point and is correct that we did not intend to exclude the third scenario from qualifying under Ranking Criterion One which would involve a hospital that is located on a different site than the closed hospital, and that hospital assumes an entire program simultaneous to the closure of the other hospital, and not a year or more prior to the hospital's closure. We are clarifying in this final rule that a hospital is eligible for Ranking Criterion One if it is located on a site that is different from the closed hospital, and assumes an entire program at the time the hospital closes (not a year or more prior to the hospital's closure). In fact, we are adding a fourth scenario in this final rule that could fit into Ranking Criterion One—that is, when one hospital acquires another hospital, retires the provider agreement of the acquired hospital, and creates a multi-campus hospital, but otherwise, the second campus continues to operate as before. In that case, the acquiring hospital may qualify under Ranking Criterion One. In addition, we are clarifying and refining the timeframe we had in mind when describing the scenario where one hospital assumes a program "a year or more" prior to the closure of another hospital (75 FR 46423). We did not mean that a hospital that took over a program 20 years before the closure of a hospital would qualify under Ranking Criterion One. Rather, we intended to convey a relatively short timeframe prior to the hospital's closure in which another hospital assumed a program. For purposes of this final rule, we are clarifying that in order to qualify under Ranking Criterion One in the instance where a hospital assumed a program(s) from a hospital that closed prior to the hospital's closure, the hospital must have assumed the program(s) in its entirety no more than 5 years prior to the date of the hospital's closure.

Comment: One commenter suggested that CMS reorder Ranking Criteria One and Two and give precedence to applicant hospitals that have an affiliation agreement with the closing hospital. The commenter also suggested that if the applicant hospital is also a member of the affiliated group and a corporate affiliate (subsidiary, parent or sister corporation) of the closing hospital, it should be given the highest priority within Ranking Criterion One. The commenter believed that Congress intended to allow hospitals that are part of an affiliated group, to keep FTEs that would otherwise be lost because of the closure of a hospital within the affiliated group. The commenter suggested that if CMS wishes to protect programs that would continue to run after a hospital "closes" because it is acquired (and its provider number terminated), CMS could specify this item as the second ranking criterion as long as it specifies that this scenario is a result of an acquisition. The commenter further noted that the requirement to operate the program exactly as it was operated before may be counterproductive. The commenter indicated that it may, for example, cause the acquiring hospital to avoid replacing faculty members that were not performing well or making other improvements.

Response: We acknowledge that Congress desired to give preference to hospitals that are members of the same Medicare GME affiliated group as the closed hospital when distributing the slots from the closed hospital, as stated in section 1886(h)(4)(H)(vi) of the Act, as added by section 5506(a) of the Affordable Care Act. However, we are

not convinced that being a member of the same Medicare GME affiliated group alone, or being a corporate affiliate of the closed hospital, warrants a greater degree of preference than hospitals that assume an entire program or programs from the closed hospital. As we explained in the August 3, 2010 proposed rule (75 FR 46423), "We note that we are proposing this ranking criterion regarding affiliated hospitals as second, after the first ranking criterion regarding applying hospitals that assume an entire program or programs from the closed hospital because, even though section 5506 of the Affordable Care Act directs the Secretary to give preference to members of the same affiliated group, we believe that a hospital that assumes the responsibility for an entire program or programs demonstrates a commitment to maintain the programs to an even greater degree than does a hospital that was affiliated with the hospital that closed and may only be maintaining a portion of the residency program or programs."

Furthermore, the commenter need not be concerned that hospitals that would fit into Ranking Criterion Two would be at a disadvantage and deprived of their fair share of slots to hospitals that would fit under Ranking Criterion One. In fact, Ranking Criteria One and Two are *not* competing with each other, and hospitals fitting into each category would get their "fair" share of slots. For example, assume a hospital with an FTE resident cap of 100 closes. Hospital A assumes the entire programs in which 80 FTE residents were training when the hospital closed. Hospital B had been receiving 20 FTE slots from the closed hospital under the terms of a Medicare GME affiliation agreement. Hospital A applies for 80 slots under Ranking Criterion One and, all other things being equal, is awarded 80 slots. Hospital A could apply for more than 80 slots, *but it could only receive consideration under Ranking Criterion One for a maximum of 80 slots.* Therefore, 20 slots would remain for Hospital B to apply for and receive under Ranking Criterion Two. Accordingly, we do not believe it is necessary to reorder Ranking Criteria One and Two.

Comment: Some commenters asked for clarification regarding what CMS meant by a hospital assuming an "entire" program. One commenter urged CMS to be flexible with applicants for Ranking Criterion One and clarify that a hospital that takes on "substantially all of the residents training in a particular program at the closed hospital prior to the hospital's closure or at the time of the hospital's closure" would be deemed to have assumed an "entire" program. The commenters pointed out that there may be reasons beyond the control of an applying hospital as to why it may not be able to assume *all* of the residents in a program from the hospital that closed, unfairly placing the applying hospital in a lower ranking category than Ranking Criterion One. For example, one or more residents might choose not to train at the applying hospital with the rest of their program colleagues, but instead may choose to complete their training elsewhere.

Additionally, the commenters asked CMS to define an "entire program" to include only FTE residents training in the closed hospital at the time of the hospital's closure. For example, if a particular program at a closed hospital consists of 50 residents, but 20 were training at another hospital at the time of the closure, a hospital that agrees to assume the remaining 30 residents who were all training at the closed hospital should qualify under "Ranking Criterion One," even though the hospital did not assume the program's full complement of 50 residents.

Response: We agree with the commenters that flexibility in the definition of "entire" program is appropriate because there could be reasons beyond the control of the applying hospital why it is unable to assume all of the residents from the closed hospital. The commenters recommended that a hospital that takes on "substantially all of the residents training in a particular program at the closed hospital prior to the hospital's closure or at the time of the hospital's closure" would be deemed to have assumed an "entire" program. We agree with this concept, and for purposes of section 5506, we are stating that a hospital that takes on 90 percent of the residents training in a particular program at the closed hospital within 5 years prior to the hospital's closure or at the time of the hospital's closure would be deemed to have assumed an "entire" program. We note that assuming the "entire" program, even if it is 90 percent or more of the residents, implies no limitation based on the closed hospital's FTE resident cap. For example, if a closed hospital is only training residents in an internal medicine program, its FTE resident cap is 10, and it was training 15 FTEs, then assumption of the "entire" program does not mean 10 FTEs, it means at least 90 percent of 15, i.e., 13.5 FTEs. The applying hospital may request up to 13.5 FTEs under Ranking Criterion One.

In the example that the commenters provided regarding a particular program at a closed hospital that consists of 50 residents, but 20 were training at another hospital at the time of the closure, we agree that a hospital that assumes the remaining 30 residents who were all training at the closed hospital should qualify under "Ranking Criterion One," even though the hospital did not assume the program's full complement of 50 residents. This policy with regard to what constitutes a "closed program" is consistent with our current policy and definition of "closure of a hospital residency program" at § 413.79(h)(1)(ii), which means "the hospital ceases to offer training for residents in a particular approved medical residency training program." This definition recognizes that hospitals often co-sponsor accredited programs, so that while one of the hospitals may cease to provide training in that accredited program, the program and rotations still continue to exist at the other hospitals that co-sponsor and train residents in that same accredited program. Furthermore, in light of the clarified definition of "entire" program above, using this example, an applying hospital need only assume 90 percent of the 30 FTE residents, or 27 FTE residents, in this particular program from the closing hospital. However, we note that if a hospital is only assuming 90 percent of the residents in the program, then it may only apply to receive 90 percent of the slots in the program under Ranking Criterion One. If the applying hospital plans to further expand the program and can meet the demonstrated likelihood requirement for doing so, it may possibly qualify for those additional slots under Ranking Criterion Four through Seven (but not under Ranking Criterion Three because Ranking Criterion Three is for instances where less than an "entire" program is assumed).

Comment: One commenter acknowledged CMS' intent to promote continuity and supported this requirement for hospitals that close on a going forward basis. However, the commenter did not believe that the "seamless" operation requirement under Ranking Criterion One should apply to hospitals that apply for resident cap slots from hospitals that closed between March 23, 2008, and the date of publication of the final rule. Another commenter understood "seamless" to mean that there cannot have been a point at which the assumption of the program was interrupted. The commenter believed this requirement is "wholly unfair" to hospitals that assumed programs from hospitals that closed prior to the publication of the proposed or final rules. The first commenter believed that while these

hospitals may have been willing to provide a service to the community by continuing the entire residency program from the closed hospital, they were not previously on notice that they would have to do so "seamlessly." The second commenter asserted that this proposed requirement "drastically minimizes the importance to these hospitals of Medicare GME funding." The commenters believed that it is unrealistic and unfair for CMS to expect a hospital to have applied for ACGME approval to train an entire program on a permanent basis without "any clear indication that Medicare funding would be continuing." For these reasons, the commenters urged CMS to adopt the "seamless" requirement for Ranking Criterion One on a prospective basis only.

Response: As the commenters acknowledge, our intent in implementing section 5506 is to promote continuity, and, therefore, our intent is that "seamless" assumption of a program from a closed hospital *does* mean that there cannot have been a point at which the assumption of the program was interrupted. The commenters are describing situations where hospitals have closed in the past one or two years, and while the programs from those closed hospitals may have been transferred "seamlessly" to the applying hospitals 1 or 2 years ago, the applying hospitals have allowed those programs to phase out, as the residents that had originally trained at the closed hospital have graduated. We understand that Medicare GME funding is extremely important to teaching hospitals, and the absence of it may be a strong factor in an applying hospital's decision to allow a transferred program to phase out. Further, we have never required other teaching hospitals to absorb additional residents on a temporary or permanent basis. While we do not negatively regard a hospital that did not seamlessly assume a program or programs from hospitals that have already closed, we also do not see the need to reward these same hospitals by ranking them under Ranking Criterion One, now that the prospect of additional Medicare GME funding may be available to them and they are willing to "revive" phased-out programs. Rather, we believe these hospitals could apply for slots under section 5506 and may, in fact, receive them, but they would be ranked under criteria below Ranking Criterion One, as appropriate. Accordingly, we do not believe it is necessary to adopt the "seamless" requirement under Ranking Criterion One on a prospective basis.

Comment: One commenter noted that CMS proposed that, to qualify under Ranking Criterion One, an applying hospital must "continu[e] to operate the program(s) exactly as it had been operated by the hospital that closed (that is, same residents, same program director, and same (or many of the same) teaching staff)." While the commenter understood that such continuity may be the likely outcome of moving the entire program to a new hospital, the commenter believed that decisions about who the program director and teaching staff should be are better left to the "leaders of academic medicine" to decide, and "should not be dictated by CMS or used as a litmus test for whether a hospital has "assumed" an entire program." The commenter expressed particular concern about these requirements in situations in which an already-existing teaching hospital takes over the entire program. The commenter pointed out that, unlike nonteaching hospitals just beginning to train residents, such teaching hospitals may not need to hire additional faculty or program directors, but instead, may simply absorb the entire program into one of its own, already-established residency training programs (perhaps, for example, to avoid having two identical programs at the same hospital). The commenter believed that the adopting hospital should not be forced to hire these individuals from the closed hospital to meet "Ranking Criterion One." The commenter argued that such staffing decisions should be in the hands of the academic medical leaders who assume responsibility for the program.

Response: In the proposed rule, we defined "assuming an entire program" as maintaining the same residents, staff, and program director as the original program because that is consistent with our policy, as clarified in the FY 2010 IPPS/LTCH PPS final rule, regarding the definition of assuming an existing program (as distinguished from starting a brand new program). However, we believe that, in this case, Congress was concerned with preservation of FTE cap slots, and maintaining continuity for the residents. Therefore, we agree with the commenter that a hospital may fit into Ranking Criterion One without taking in the same staff and program director of the closed hospital, and instead it may be determined to have assumed an entire program if it trains all of the residents from the closed hospital's program.

Comment: One commenter asked CMS to use its authority to give slots from hospitals that have closed to be used for replacement of positions of family medicine programs that have closed. The commenter acknowledged that hospitals frequently close family medicine training programs and use its current slots to promote production of more lucrative specialties. The commenter urged the Secretary to utilize the authority under Ranking Criterion One to distribute slots from the closed hospital to those hospitals in the same core-based statistical area (CBSA) that have continued to operate a family medicine residency program that was closed by another hospital with the same program director and the same residents with the family medicine residency program. The commenter requested parallel provisions under Ranking Criteria Two and Three.

Response: Ranking Criterion One addresses the commenter's request to provide preference to hospitals in the same CBSA that assume an entire family medicine program that was previously operated by a hospital that closed. Although Ranking Criterion One does not specify any one specialty in particular; it does provide preference to a hospital that assumed an entire program in any specialty (including family medicine) that closed as a result of a hospital closure. It is important to note that in the event a program closes for reasons other than hospital closure (assuming the hospital does not subsequently close shortly thereafter as well), these slots will not be available for redistribution under section 5506.

Comments on Ranking Criterion Two

Comment: Some commenters believed that CMS proposed to interpret too strictly the requirement for giving preference to hospitals that are members of the same affiliated group as the hospital that closed. The commenters noted that section 5506 merely states that CMS shall give preference within each geographic category "to hospitals that are members of the same affiliated group (as defined by the Secretary under clause (ii)) as the closed hospital." The commenter further noted that CMS proposed that in order to receive preference, the applying hospital must have *received* slots from the closed hospital under the terms of the affiliation agreement. The commenters asserted that Congress never limited this priority to only hospitals that received slots from the closed hospital under the affiliation agreement. Rather, the commenters believed that having a relationship with the closed hospital "in the context of a GME affiliated group" should be sufficient to qualify for preference.

Response: As we have explained in the proposed rule and as the commenters acknowledge, we believe the intent of section 5506 is to promote

continuity and limit disruption in residency training. In that light, we believe it is logical to give preference to a hospital that received slots under the terms of the Medicare GME affiliation agreement so that the hospital could continue to train at least the number of FTE residents it had trained under the terms of the Medicare GME affiliation agreement, avoiding the displacement of even more residents. We do not see why a hospital that loaned slots to the closed hospital under the terms of the Medicare GME affiliation agreement warrants special consideration if it wants more slots, simply because it was a member of the same affiliated group. We further disagree with the commenter's argument that having a relationship with the closed hospital "in the context of a GME affiliated group" should be sufficient to qualify for preference. We note that under the rules of the "shared rotational arrangement" (as defined at § 413.75(b)) which is a requirement for all members within the same Medicare GME affiliated group, it is possible for a hospital in the same Medicare GME affiliated group as the closed hospital not to have any rotating relationship with the closed hospital—it may have a training relationship with other hospitals in the group which in turn, had the training relationship with the closed hospital. We see no reason to grant this hospital, which had no direct training relationship with the closed hospital, preference under Ranking Criterion Two, simply because it was a member of the same Medicare GME affiliated group as the closed hospital. Therefore, we are not adopting the commenter's recommendation, and are only giving preference to hospitals that *received* slots from the closed hospital under the terms of the Medicare GME affiliation agreement, so that the hospital could continue to train at least the number of FTE residents it had trained under the terms of the Medicare GME affiliation agreement. We also note that should the hospital that received slots from the closed hospital, or should the hospital that lent slots to the closed hospital, desire to assume *additional* programs or parts of programs from the closed hospital, they may qualify for slots for those respective programs under Ranking Criteria One, Three, or others, as appropriate.

Comment: One commenter stated that limiting preference to hospitals that received slots under the most recent affiliation agreement would deny some hospitals the opportunity to regain slots unfairly lost due to prior affiliation agreements. Therefore, the commenter asked CMS to expand preference for the redistributed slots to hospitals that were part of the same affiliated group at any point within 5 years prior to the statutory cut off of March 23, 2008. The commenter also asked CMS to ensure that any hospitals operating under the same provider number as a member of the affiliated group during that time period are eligible for the slots.

Response: In determining which hospitals qualify under Ranking Criterion Two regarding being in the same Medicare GME affiliated group as the hospital that closes, we believe, as the proposed Ranking Criterion Two specifies, that the hospital or hospitals that were most recently affiliated with and received slots from the closed hospital would have the most immediate need for those slots. Hospitals that have not been affiliated with the closed hospital for a year or more would not likely be as reliant on the slots from the closed hospital, nor would they be affected quite so significantly by the sudden closure of the hospital. Nevertheless, we acknowledge that it is possible that limiting Ranking Criterion Two to only hospitals that had been affiliated with the closed hospital on the most recent Medicare GME affiliation prior to the hospital's closure in some instances might be too restrictive, and could deny hospitals that were affiliated with the closed hospital in prior years some share of the slots upon which they are still reliant. We believe the commenter's recommendation that CMS expand preference for the redistributed slots to hospitals that were part of the same affiliated group at any point within 5 years prior to the statutory cut-off of March 23, 2008, has merit. We believe an administratively feasible approach would be one in which, as a first step, we would refer to the Medicare GME affiliation agreement of which the closed hospital was a member most recently prior to its closure. Those hospitals in that most recent Medicare GME affiliation agreement that received slots from the closed hospital would get first preference under Ranking Criterion Two. However, in the case where the most recent Medicare GME affiliation agreement of which the closed hospital is a member before it closes is with a hospital that also has closed or is closing, we would then refer to a previous affiliation agreement, or agreements, but not to Medicare GME affiliation agreements that were entered into more than 5 years prior to the hospital's closure. Preference would then be given to an applying hospital that was listed as a participant in the next most recent Medicare GME affiliation agreement of which the closed hospital was a member before the hospital closed, but would be limited to affiliations entered into in the past 5 years, and that the applying hospital received slots from the closed hospital under the terms of that affiliation agreement. We are modifying Ranking Criterion Two to read as follows:

- *Ranking Criterion Two. The applying hospital was listed as a participant of a Medicare GME affiliated group on the most recent Medicare GME affiliation agreement of which the closed hospital was a member before the hospital closed, and under the terms of that Medicare GME affiliation agreement, the applying hospital received slots from the hospital that closed, and the applying hospital will use the additional slots to continue to train at least the number of FTE residents it had trained under the terms of the Medicare GME affiliation agreement. If the most recent Medicare GME affiliation agreement of which the closed hospital was a member before the hospital closed was with a hospital that itself has closed or is closing, preference would be given to an applying hospital that was listed as a participant in the next most recent Medicare GME affiliation agreement (but not one which was entered into more than 5 years prior to the hospital's closure) of which the first closed hospital was a member before the hospital closed, and that applying hospital received slots from the closed hospital under the terms of that affiliation agreement.*

Finally, to address the commenter's request, we are confirming that a hospital that undergoes a name change but whose provider number and agreement do not change while it is a member of the affiliated group during the 5 years prior to the closure, could be eligible for receipt of slots from the closed hospital.

Comment: One commenter requested that CMS confirm that the Ranking Criterion Two preference would be given only for the total number of resident slots that the applying hospital *actually received* from the closed hospital pursuant to the former affiliation agreement between them.

Response: In the August 3, 2010 proposed rule (75 FR 46423), we describe that Ranking Criterion Two gives preference to hospitals that are "listed as a participant of a Medicare GME affiliated group on the most recent Medicare GME affiliation agreement of which the hospital was a member before the hospital closed, and under the terms of that Medicare GME affiliation agreement, the applying hospital *received* slots from the hospital that

closed, and the applying hospital will use the additional slots to continue training at least the number of FTE residents it had trained under the terms of the Medicare GME affiliation agreement." Therefore, under Ranking Criterion Two, a hospital may request as many slots as it received under its most recent affiliation agreement. This would be the number of FTE residents that were transferred from the closed hospital in the most recent affiliation agreement (or as amended by June 30 of that academic year, if applicable). Therefore, under Ranking Criterion 2, preference would only be given for the total number of residents slots that the applying hospital actually received from the closed hospital.

Comment: One commenter suggested that CMS reorder Ranking Criteria One and Two and give precedence to applicant hospitals that have an affiliation agreement with the closing hospital. The commenter also suggested that if the applicant hospital is also a member of the affiliated group and a corporate affiliate (subsidiary, parent or sister corporation) of the closing hospital, it should be given the highest priority within Ranking Criterion One. The commenter believed that Congress intended to allow hospitals that are part of an affiliated group to keep FTEs that would otherwise be lost because of the closure of a hospital within the affiliated group. The commenter suggested that if CMS wishes to protect programs that would continue to run after a hospital "closes" because it is acquired (and its provider number terminated), CMS could specify this item as the second ranking criterion as long as it specifies that this scenario is a result of an acquisition. The commenter further noted that the requirement to operate the program exactly as it was operated before may be counterproductive. The commenter stated that it may, for example, cause the acquiring hospital to avoid replacing faculty members that were not performing well or making other improvements.

Response: We disagree with the commenter's suggestion that we reorder the Ranking Criteria to give first preference to hospitals that were members of the same affiliated group as the closed hospital, and rather, we assert that the primary principle for a section 5506 is continuity of existing training. Therefore, we are finalizing our proposal to give priority to a hospital that will continue to operate the existing program, either at the original site or at another hospital.

Comment: One commenter noted that while under CMS' ranking criteria, hospitals are awarded slots from a closed hospital for particular uses (for example, to establish a new or expand an existing geriatrics residency program), CMS did not specify the period of time during which these slots would be restricted to these specific uses. The commenter believed that CMS should place a 5-year limit on hospitals' obligation to use the slots for the purpose for which the hospital is awarded the slots, as this amount of time is consistent with the amount of time with the restrictions Congress imposed. Furthermore, the commenter stated that while it is unlikely that hospitals would change their programs after only five years, they should be permitted the flexibility to adapt their programs as their educational needs or the patient care needs of the community change.

Several commenters also disagreed with the proposal that any slots awarded through the closed hospital redistribution program may not be used as part of the aggregate cap in a Medicare GME affiliation agreement, and encouraged CMS to permit hospitals to use these slots as part of a GME affiliation agreement. One commenter suggested that perhaps CMS could permit hospitals to use these slots as part of a GME affiliation agreement after 5 years.

Response: As we have stated in this final rule, each application by a hospital must be program specific. That is, the hospital must complete a separate CMS Evaluation Form for each program and demonstrate the likelihood of filling the slots in each program. However, increases in hospital's FTE resident caps under section 5506 for direct GME and IME, once granted to a hospital, are no longer program specific. Rather, the caps are applied to any residents the hospital trains in excess of its otherwise applicable FTE cap(s) (which could include the hospital's 1996 caps, subject to permanent adjustments for new programs or reductions under section 1886(h)(4)(H) of the Act).

We also note that hospitals must sign an attestation as part of the hospital's application for the overall increase to the cap under section 5506 to certify that the information claimed in the application is true at the time of the application. Thus, if a hospital claims on one of its CMS Evaluation Forms that the hospital is applying for the increase because it plans to use the FTEs because it is training residents from a program or a hospital that closed, and the applicant hospital no longer qualifies for a temporary adjustment to its cap, at least at the time of the application, the hospital intends to use at least that part of its section 5506 cap for this stated purposes (that is, the purposes documented in the hospital's application).

We agree with the commenters that slots awarded under section 5506 should be permitted for use as part of the aggregate cap in a Medicare GME affiliation agreement. As we stated in response to a similar comment received regarding section 5503 slots, we understand that training needs can change over time, and there may be a need to cross-train residents in different hospital settings. In addition, since slots received under section 5506 are to be paid with the same direct GME PRA and IME multiplier as a hospital's other residents (unlike slots received under section 422 of the MMA which are paid at different payment rates), it would not present an administrative burden to include section 5506 slots in Medicare GME affiliation agreements. The commenter suggested that we allow the slots awarded under section 5506 to be used in Medicare GME affiliation agreements after 5 years. We believe 5 years is a reasonable timeframe for hospitals to use the slots they received for the purpose for which they applied for those slots. After a 5-year period, a hospital that received slots under section 5506 may use those slots as part of its FTE residents caps in a Medicare GME affiliation agreement. The 5 years will begin prospectively from the date that the slots were made permanent at each respective hospital.

Comments on Ranking Criterion Three

Comment: Commenters requested that, as under Ranking Criterion One, CMS not require that a hospital must have requested a permanent expansion of their residency program from the accrediting body prior to the conclusion of the training of a displaced resident in order to qualify for Ranking Criterion Three, or that CMS not require that the applying hospital must have permanently expanded its program immediately following the completion of the displaced residents' training. One commenter requested that here too, CMS should apply any similar "seamless" approach on a prospective basis only.

Response: As we stated in response to the similar previous comment regarding Ranking Criterion One, our intent in implementing section 5506 is to promote continuity. Therefore, in order to qualify under Ranking Criterion Three, the applying hospital must have permanently expanded its program immediately following the completion of the displaced residents' training. If there was an interruption in the

expansion of the program, perhaps the hospital could apply for slots under section 5506, and may in fact receive them, but the hospital would be ranked under a criterion below Ranking Criterion Three, as appropriate. Accordingly, we do not believe it is necessary to adopt the "seamless" requirement under Ranking Criterion Three on a prospective basis.

Comment: Some commenters requested that Ranking Criterion Three should apply to a hospital that took in displaced residents, regardless of whether the applying hospital actually qualified for and received a temporary cap adjustment for the displaced resident(s). One commenter also observed that, in the proposed rule, CMS did not specify the means by which a hospital would need to demonstrate that it took in displaced residents (that is, CMS did not specify that only a hospital that actually received a temporary cap adjustment for the displaced resident(s) could qualify under Ranking Criterion Three). The commenter argued that, regardless of whether the applying hospital needed or received a temporary cap adjustment, the applying hospital "performed no less of a service to the community and to the resident's education as a hospital that required temporary cap slots to be paid for the residents' training time." The commenter requested that CMS be flexible in the ways it would allow a hospital to demonstrate that it took in displaced residents, including through ACGME documents indicating approval for temporary training.

Response: We disagree with the commenter's argument that regardless of whether the applying hospital needed or received a temporary cap adjustment, the applying hospital "performed no less of a service to the community and to the resident's education as a hospital that required temporary cap slots to be paid for the residents' training time." Moreover, we believe that whether the applying hospital actually needs a temporary cap adjustment is indeed relevant because a hospital that has sufficient room under its FTE resident cap to train displaced residents would not need to apply for additional slots under section 5506 in order to continue training those residents. Therefore, such a hospital would only need to apply under Ranking Criterion Three if it is currently training residents in excess of its FTE resident cap. However, it is possible that a hospital may not have received a temporary cap adjustment because at the time of hospital closure, there simply were not enough available caps available to cover each of the displaced residents. In such a case, the hospital could demonstrate a need for additional caps to continue training the displaced residents in the absence of a temporary cap adjustment. With regard to the commenter's second point, we will accept ACGME documents that indicate approval for temporary training as legitimate documentation to demonstrate that a hospital took in displaced residents.

Comment: One commenter suggested that, similar to Ranking Criterion One, CMS limit the number of residency slots that could be awarded to an applying hospital under Ranking Criterion Three to the actual number of individual residents that the applying hospital took in and trained through the completion of their residencies.

Response: We agree with the commenter and will limit the number of residency slots that will be awarded to an applying hospital under Ranking Criterion Three to the actual number of individual displaced FTE residents that the applying hospital took in and trained through the completion of their residencies.

Comments on Ranking Criteria Four Through Seven

Comment: One commenter acknowledged that CMS devised the Ranking Criteria Four through Eight consistent with the spirit of the preferred specialties under section 5503, but did not believe it is appropriate for CMS to make judgments regarding the appropriateness of one type of program versus another "absent a clear directive within the ACA." The commenter believed all primary care programs and general surgery were deemed equally important within section 5503, and therefore, geriatrics should not be favored, nor should primary care be ranked above general surgery. The commenter recommended that Ranking Criteria Four through Eight be simplified and collapsed into the following three criteria:

- Recommended Ranking Criterion Four: Applying hospital does not meet ranking criterion 1, 2, or 3, is located in a HPSA, and is seeking to establish or expand a primary care or general surgery residency program.
- Recommended Ranking Criterion Five: Applying hospital does not meet ranking criterion 1, 2, or 3, is not located in a HPSA, and is seeking to establish or expand a primary care or general surgery residency program.
- Recommended Ranking Criterion Six: Applying hospital seeks the slots for purposes that do not fit into any of the above ranking criteria.

Another commenter suggested that Ranking Criteria Four, Five, and Six should be reorganized to place a higher priority on primary care rather than geriatrics. The commenter believed that, based on available data, there is a greater need for primary care than for geriatrics in communities that have large Medicare and Medicaid populations. The commenter also noted that Ranking Criterion 4 does not require the applying hospital to use every additional slot to establish a new or expand an existing geriatrics residency program, but proposed Criteria 5 and 6 would require the applying hospital to use all the additional slots for primary care residency programs. The commenter believed that this distinction suggests that CMS recognizes the need for additional primary care residency slots and therefore should support the reprioritization of Ranking Criteria Four, Five, and Six.

This same commenter was supportive of Ranking Criteria Seven and Eight. The commenter also provided some additional criteria that could be used in this process. The suggested additional criteria include: (1) The percentage by which the applying hospital is operating above its Medicare-funded GME and IME FTE caps; (2) whether the applying hospital qualifies for DSH payments; and (3) the ratio of unfunded residents to Medicare census. The commenter also suggested that, within each criterion, preference should be given to hospitals that were deemed qualified to receive additional FTE slots pursuant to section 422 of the MMA, but that did not receive any additional slots through that process.

Response: We agree with the first commenter's suggestions regarding simplifying and collapsing Ranking Criteria Four, Five, and Six. However, the commenter did not specify that the applying hospital will use "all" the additional slots toward primary care or general surgery, and we are adding "all" to our final ranking criteria as follows:

- Ranking Criterion Five: Applying hospital does not meet ranking criterion 1, 2, or 3, is located in a HPSA, and will use all the additional slots to establish or expand a primary care or general surgery residency program.
- Ranking Criterion Six: Applying hospital does not meet ranking criterion 1, 2, or 3, is not located in a HPSA, and will use all the additional slots to establish or expand a primary care or general surgery residency program.
- Ranking Criterion Seven: Applying hospital seeks the slots for purposes that do not fit into any of the above ranking criteria.

We also agree that general surgery should not be given priority over other

primary care specialties. However, we do believe that geriatrics should be favored within the section 5506 ranking criteria, as the field of geriatrics specifically serves the beneficiaries of the Medicare program. Therefore, we are retaining our original Ranking Criteria four, and we are adopting the Ranking Criteria Five, Six, and Seven stated above.

With regard to the comment that Ranking Criterion Four does not require all of the slots awarded to be used toward geriatrics, unlike the final Ranking Criteria Five, Six, and Seven that do require all of the slots awarded to be used toward each criterion's respective specialty, we are specifically not requiring all of the slots awarded under Ranking Criteria Four to be used for geriatrics because a hospital may not necessarily need so many slots for geriatrics fellowships, which typically are not large programs. Therefore, because applications under section 5506 are program-specific, we believe that a hospital that is applying for slots for use in a geriatrics program should not be precluded from also applying for slots for other programs (although the requests for those other programs, even other primary care or surgery programs, would fall under Ranking Criterion Seven). We are not adopting the second commenter's remaining suggestions for additional criteria, as they represent goals and policies that do not necessarily align with the policy goal of section 5506, which is continuity and preservation of existing GME infrastructure in an area.

Comment: One commenter requested that a ranking criterion preference should be given to hospitals training primary care residents, particularly family medicine residents, with "principal preference" given to hospitals that have been operating a family medicine program as of the enactment of the Affordable Care Act, and have been doing so without Medicare GME reimbursement, and do not have an FTE cap established. The commenter believed that hospitals that are supporting programs that, by application of CMS regulations, have not qualified for payment "would be greatly strengthened" by the receipt of slots from teaching hospitals that closed. The commenter believed that CMS should establish a first priority Ranking Criterion for such hospitals, across the first three of the priority order groupings (for example, CBSA, State, and region). Alternatively, the commenter suggested that Ranking Criteria Five and Six be combined and become Ranking Criterion One, with the proposed Ranking Criterion One being redesignated as Ranking Criterion Two, and so forth. The commenter noted that, to the extent that an applying hospital is requesting slots because it is assuming or assumed an entire program, the new primary care Ranking Criterion One would "work in tandem" with the proposed rule's Ranking Criterion One.

Response: We believe that the commenter is requesting that points be assigned to a new teaching hospital that offers family medicine training without receipt of Medicare payment. However, we did not propose to create a point system under section 5506 as it did under section 5503. Furthermore, there is no need for us to provide additional preference to family medicine programs because we already provide preference for primary care programs under Ranking Criteria Five and Six. Because family medicine is also primary care, family medicine programs would receive preference under these ranking criteria. We also note that the commenter described an applying hospital that is assuming or assumed an entire program; therefore, it is possible that the commenter's hospital may already qualify under Ranking Criterion One, and additional preference for family medicine or primary care may not be necessary.

After consideration of the public comments we received, we are finalizing the following Ranking Criteria:

☐ *Ranking Criterion One. The applying hospital is requesting the increase in its FTE resident cap(s) because it is assuming (or assumed) an entire program (or programs) from the hospital that closed, and the applying hospital is continuing to operate the program(s) exactly as it had been operated by the hospital that closed (that is, same residents, possibly the same program director, and possibly the same (or many of the same) teaching staff).*

☐ *Ranking Criterion Two. The applying hospital was listed as a participant of a Medicare GME affiliated group on the most recent Medicare GME affiliation agreement of which the closed hospital was a member before the hospital closed, and under the terms of that Medicare GME affiliation agreement, the applying hospital received slots from the hospital that closed, and the applying hospital will use the additional slots to continue to train at least the number of FTE residents it had trained under the terms of the Medicare GME affiliation agreement. If the most recent Medicare GME affiliation agreement of which the closed hospital was a member before the hospital closed was with a hospital that itself has closed or is closing, preference would be given to an applying hospital that was listed as a participant in the next most recent Medicare GME affiliation agreement (but not one which was entered into more than 5 years prior to the hospital's closure) of which the first closed hospital was a member before the hospital closed, and that applying hospital received slots from the closed hospital under the terms of that affiliation agreement.*

☐ *Ranking Criterion Three. The applying hospital took in residents displaced by the closure of the hospital, but is not assuming an entire program or programs, and will use the additional slots to continue training residents in the same programs as the displaced residents, even after those displaced residents complete their training (that is, the applying hospital is permanently expanding its own existing programs).*

☐ *Ranking Criterion Four.* The applying hospital does not fit into Ranking Criteria One, Two, or Three, and will use additional slots to establish a new or expand an existing geriatrics residency program.

☐ *Ranking Criterion Five: Applying hospital does not meet Ranking Criterion One, Two, or Three, is located in a HPSA, and will use all the additional slots to establish or expand a primary care or general surgery residency program.*

☐ *Ranking Criterion Six: Applying hospital does not meet Ranking Criterion One, Two, or Three, is not located in a HPSA, and will use all the additional slots to establish or expand a primary care or general surgery residency program.*

☐ *Ranking Criterion Seven: Applying hospital seeks the slots for purposes that do not fit into any of the above ranking criteria.*

We are also finalizing the following policies with regard to the Ranking Criteria:

- For purposes of section 5506, we are stating that a hospital that takes on 90 percent of the residents training in a particular program at the closed hospital within 5 years prior to the hospital's closure or at the time of the hospital's closure would be deemed to have assumed an "entire" program.
- Under Ranking Criterion Two, we are only giving preference to hospitals that *received* slots from the closed hospital, under the terms of the Medicare GME affiliation agreement so that the hospital could continue to train at least the number of FTE residents it had trained under the terms of the Medicare GME affiliation agreement.
- Slots awarded under section 5506 may be used as part of the aggregate cap

in a Medicare GME affiliation agreement after five years from the date of their award.

6. Demonstrated Likelihood of Filling the Positions Within a Certain Time Period

Section 1886(h)(4)(H)(vi) of the Act, as added by section 5506(a) of the Affordable Care Act, does not place a limit on the number of slots an applying hospital may request, although under section 1886(h)(4)(H)(iv)(IV) of the Act, the Secretary must ensure that the aggregate number of increases to hospitals' FTE residents caps are equal to the FTE residents caps of the hospital that closed. However, section 1886(h)(4)(H)(iv)(III) of the Act specifies that the Secretary may only award slots to an applying hospital "if the Secretary determines that the hospital has demonstrated a likelihood of filling the positions made available under this clause within 3 years." In the August 3, 2010 proposed rule (75 FR 46424), we proposed that hospitals *must provide documentation* to demonstrate the likelihood of filling requested slots under section 5506 within 3 years. For example, the applying hospital would document that it does not have sufficient room under its FTE resident caps to take in the additional residents, and has approval from the relevant accrediting body to take over the closed hospital's residency program(s), or expand its own residency program(s) to reflect a permanent commitment to train additional residents. We proposed that "within 3 years" would mean within the 3 academic years immediately following the application deadline to receive slots after a particular hospital closes. For example, where the application deadline is April 1, 2011, the immediately following academic year is July 1, 2011, and therefore, hospitals must demonstrate the likelihood of filling their slots by June 30, 2014.

We did not receive any public comments on this section, but as noted in response to a previous comment, we are adding to the Demonstrated Likelihood Criteria for section 5506 in this final rule that if the hospital has made a commitment to start a new program, or if the hospital is seeking approval from the relevant accrediting body to take over the closed hospital's residency program(s), the hospital may submit documentation that it has made a commitment to start a new program or take over the program(s), respectively.

7. No Duplication of FTE Cap Slots

Section 5506(d) of the Affordable Care Act specifies that "the Secretary shall give consideration to the effect of the amendments made by this section on any temporary adjustment to a hospital's FTE cap under § 413.79(h) * * * (as in effect on the date of enactment of this Act) in order to ensure that there is no duplication of FTE slots * * *." Under existing regulations at § 413.79(h), hospitals that take in residents that are displaced by the closure of another hospital may receive temporary increases to their FTE resident caps so that they may receive payment for training the specific displaced residents. The temporary cap adjustment lasts only for the duration of a specific displaced resident's training. In distributing slots permanently under section 5506, we may need to be cognizant of the number of FTE residents for whom a temporary FTE cap adjustment was provided, and when those residents will complete their training, at which point the temporary slot associated with those displaced residents would be available for permanent redistribution.

In the proposed rule, we stated that we believe it will only be necessary to delay permanent assignment of FTE cap slots in instances where if, after fulfilling the requests of hospitals that qualify to receive additional slots under Ranking Criteria One, Two, and Three, there are still excess slots available. In the case where an applying hospital fits within Ranking Criterion One, in the August 3, 2010 proposed rule (75 FR 46424), we proposed to revise the existing regulations at § 413.79(h) limiting temporary cap adjustments for displaced residents *by the number of FTE residents in the program(s) in which the applying hospital is operating seamlessly*. We proposed to immediately assign permanently that number of FTE slots to the qualifying hospital. For example, if teaching hospital B assumes an entire internal medicine program with 20 FTEs from closed hospital A, no temporary FTE cap adjustment under § 413.79(h) would be needed for those internal medicine residents, and teaching hospital B would immediately receive a permanent FTE resident cap increase of 10 FTE residents. Similarly, in the case where an applying hospital fits within Ranking Criterion Two, we proposed to revise the existing regulations at § 413.79(h) limiting temporary cap adjustments for displaced residents *by the number of FTE residents that the applying hospital received under the terms of the affiliation agreement from the closed hospital*. We proposed to immediately assign permanently that number of FTE slots to the qualifying hospital. For example, if teaching hospital D had received 30 FTE slots from closed hospital C under the terms of a Medicare GME affiliation agreement for the purposes of a shared rotational arrangement (as defined at § 413.75(b)) for a general surgery program, teaching hospital D would immediately receive a permanent FTE resident cap increase of 30 FTE residents, which would enable hospital D to continue to receive direct GME and IME payment for its share of training 30 general surgery residents.

Lastly, in the case where an applying hospital fits within Ranking Criterion Three, we proposed to revise § 413.79(h) to provide for temporary cap adjustments for displaced residents by *the number of displaced FTE residents the applying hospital takes in*, and to immediately assign permanently that number of FTE slots to the qualifying hospital. For example, if Hospital E takes in three FTE displaced residents in a family medicine program, and not only trains those three displaced residents until they complete their training, but permanently expands its existing family medicine program such that it will add three more FTEs in the place of three that completed their training, we would immediately assign three FTEs permanently to Hospital E, bypassing any temporary adjustment under § 413.79(h). Accordingly, there would be no duplication of FTE slots when distributing slots to hospitals that qualify under the first three ranking criteria.

If, after distributing the slots from a closed hospital to increase the FTE caps for applying hospitals that fall within Ranking Criteria One, Two, and Three, there are still excess slots available, it is possible that those excess slots might be associated with displaced residents for whom temporary cap adjustments under § 413.79(h) *are* necessary. That is, it is possible that in the case where applying hospitals do not permanently assume *all* of the closed hospital's residents and programs, temporary cap transfers under § 413.79(h) would be necessary to allow the remaining residents to complete their training. Therefore, we proposed to distribute the slots accordingly to increase the FTE resident caps for hospitals that fall within Ranking Criteria Four through Seven. However, to avoid duplicate FTE counting, we would only permanently assign the slots to the qualified hospitals falling within Ranking Criteria Four through Seven once the displaced residents have completed their training and their temporary cap adjustments have expired.

In the August 3, 2010 proposed rule (75 FR 46424), we proposed to add new regulations text at § 412.105(f)(1)(ix)(B)

for IME and § 413.79(o)(2) for direct GME to reflect the provisions of section 5506 of the Affordable Care Act. In addition, we proposed some very minor changes to direct GME and IME existing text in order to clarify meaning and standardize the terminology that is used throughout.

Comment: One commenter stated that CMS did not indicate in the proposed rule how the completion of displaced residents' training would be tracked and how this would effectuate the vacating of specific resident slots granted under Ranking Criteria Four through Eight. The commenter believed that it is "critically important that valuable residency slots" from closed hospitals that are not redistributed through Ranking Criteria One through Three should be redistributed to hospitals requesting a residency cap increase as quickly as possible. For this reason, the commenter recommended that CMS ensure that permanent resident cap increases awarded via Ranking Criteria Four through Eight are redistributed on an annual basis following the completion of their use for the purpose of supporting displaced residents.

Commenters also opposed CMS' proposal to subject FTE resident slots received under section 5506 from a closed hospital to the three-year rolling average count and inclusion in the IRB ratio cap. The commenters expressed specific concern about this issue in situations in which CMS proposed to make temporary, displaced resident slots available immediately on a permanent basis as under Ranking Criteria One through Three. The commenters stated that taking in additional residents may be costly, particularly if a hospital is taking on an entire program or multiple programs, and therefore, the rolling average payment methodology and the IRB ratio cap should not apply to hospitals qualifying under Ranking Criterion One until the time the slot is awarded to the hospital on a permanent basis, or at the earliest, at the beginning of the hospital's next fiscal year.

Response: On page 46424 of the August 3, 2010 proposed rule, we stated that we believe that it will only be necessary to delay permanent assignment of FTE cap slots in instances where if, after fulfilling the requests of hospitals that qualify to receive additional slots under Ranking Criteria One, Two, and Three, there are still excess slots available. In the case where an applying hospital fits within Ranking Criterion One, in the August 3, 2010 proposed rule (75 FR 46424), we proposed to revise the existing regulations at § 413.79(h) *limiting temporary cap adjustments for displaced residents by the number of FTE residents in the program(s) in which the applying hospital is operating seamlessly*. We proposed to immediately assign permanently that number of FTE slots to the qualifying hospital. For example, if teaching hospital B assumes an entire internal medicine program with 20 FTEs from closed hospital A, no temporary FTE cap adjustment under § 413.79(h) would be needed for those internal medicine residents, and teaching hospital B would immediately receive a permanent FTE resident cap increase of 20 FTE residents. Similarly, in the case where an applying hospital fits within Ranking Criterion Two, because the closed hospital had given slots to the applying hospital under an affiliation agreement, we proposed to immediately assign permanently that number of FTE slots to the qualifying hospital. For example, if teaching hospital D had received 30 FTE slots from closed hospital C under the terms of a Medicare GME affiliation agreement for the purposes of a shared rotational arrangement (as defined at § 413.75(b)) for a general surgery program, teaching hospital D would immediately receive a permanent FTE resident cap increase of 30 FTE residents, which would enable hospital D to continue to receive direct GME and IME payment for its share of training 30 general surgery residents. Lastly, in the case where an applying hospital fits within Ranking Criterion Three, we proposed to revise § 413.79(h) to immediately assign permanently that number of FTE slots to the qualifying hospital. For example, if Hospital E takes in three FTE displaced residents in a family medicine program, and not only trains those three displaced residents until they complete their training, but permanently expands its existing family medicine program such that it will add three more FTEs in the place of three that completed their training, we would immediately assign three FTEs permanently to Hospital E, bypassing any temporary adjustment under § 413.79(h). Accordingly, there would be no duplication of FTE slots when distributing slots to hospitals that qualify under the first three ranking criteria.

In this final rule, we are making limited modification to our proposal regarding the overriding of the temporary cap adjustment regulations at § 413.79(h) for Ranking Criteria One through Three. We had proposed that in each of these three Ranking Criteria, we would "immediately" assign permanently the number of applicable slots to the qualifying hospital. However, we realize that taking in more residents may be costly for a hospital. We also want to implement section 5506 in a manner that is the most administratively feasible, particularly in terms of how the adjustments are to be reported on the Medicare cost report, while also distributing the slots and allowing them to take effect as soon as possible. Therefore, *except* for the case of a brand new hospital taking over a program(s), or an acquisition which we describe under the definition of "hospital closure" (75 FR 46422), where the new owner receives a new provider agreement and operates the hospital exactly as it had been operated prior to the acquisition, we believe that it would still be appropriate to allow a hospital that ultimately would qualify to receive slots permanently under any of the ranking criteria and that took in displaced residents to receive temporary cap adjustments and, in a limited manner, exemptions from the rolling average and IRB ratio cap (subject to the regulations at § 412.105(a)(1)(iii)). As a general rule, even if we do not make the determination as to which hospitals will receive the slots until sometime after the hospital closes, the effective date of the permanent cap adjustments to an applying hospital would be the date of the hospital's closure. However, for administrative ease, in that first cost reporting period in which the applying hospital takes in displaced residents and the hospital closure occurs, the applying hospital could receive a temporary cap adjustment, an exemption from the rolling average, and an exemption from the IRB ratio cap for the displaced residents. Then, as the commenters recommended, effective beginning with the cost reporting period *following* the one in which the hospital closure occurred, the applying hospital's permanent cap increase would take effect, and there would be no rolling average exemption (and no IRB ratio cap exemption in accordance with the *existing* regulations at § 412.105(a)(1)(iii), which state that the exception from the IRB ratio cap applies only through the end of the first 12-month cost reporting period in which the receiving hospital trains the displaced FTE residents). If the hospital closure and CMS' determination as to whether a particular applying hospital receives a permanent cap increase occur within the same cost reporting period for the applying hospital, and the applying hospital takes in displaced residents, then again, the applying hospital could receive a temporary cap adjustment, an exemption from the

rolling average, and an exemption from the IRB ratio cap only until the end of that cost reporting period. Effective beginning with the following cost reporting period, the permanent cap would apply and there would be no exemption from the rolling average (or IRB ratio cap). Following is an example of how this policy regarding the effective date of the permanent cap increases and the exemption from the rolling average and IRB ratio cap would work under section 5506:

Hospital Q closes on February 28, 2009. Hospital R, which has a December 31, 2009 fiscal year end (FYE), assumes Hospital Q's orthopedic program which is accredited for 6 positions, and 6 FTE residents are still training at Hospital Q at the time Hospital Q closes. Thus, these 6 FTEs are displaced and they transfer to Hospital R on March 1, 2009. Hospital R has an FTE resident cap of 50, and has been training approximately 50 FTEs for the past 3 years. Hospital R receives a temporary cap adjustment for the 6 displaced FTEs, which would equate to a prorated cap adjustment of 5 for the period between March 1, 2009 and December 31, 2009. For the IME calculation in its FYE December 31, 2009 cost report, Hospital R may add a prorated count of 5 FTEs after the rolling average calculation to the numerator of its IRB ratio. Hospital R may also increase the numerator of its FYE December 31, 2008 IRB ratio by 5 FTEs, so as not to be held to the IRB ratio cap (in accordance with the existing regulations at § 412.105(a)(1)(iii)). For the direct GME calculation in its FTE December 31, 2009 cost report, Hospital R would also add 5 FTEs after the nonprimary care rolling average calculation. Thus, Hospital R's payment should reflect about 5 FTEs for IME and direct GME, respectively, in FYE December 31, 2009.

The displaced orthopedic residents continue training at Hospital R in Hospital R's FYE December 31, 2010 and December 31, 2011 cost reporting periods (that is, these are not new orthopedic residents that Hospital R has recruited), and Hospital R has continued to report the displaced residents after the rolling average calculation on the Medicare cost report. On April 1, 2011, Hospital R applies for 6 slots under Ranking Criterion One. On November 5, 2011, CMS determines that Hospital R may receive a permanent increase to its cap of 6 FTEs, raising its FTE resident cap from 50 to 56. Hospital R continues to train approximately 50 other FTEs. Effective with its cost reporting period beginning on January 1, 2010, the permanent cap increase of 6 takes effect, and the displaced orthopedic FTEs *must be included* in the rolling average calculation of the Medicare cost reports for FYE December 31, 2010 and December 31, 2011.

As explained above, the policy is similar if the dates of the hospital closure and CMS's determinations of permanent cap assignments are in the same cost reporting period. For example, Hospital S closes on February 1, 2012. Hospital T, who has a December 31 FYE, assumes several programs and applies for slots under Ranking Criterion One. CMS determines that Hospital T receives a permanent cap increase on October 1, 2012. Hospital T may receive a temporary cap adjustment, an exemption from the rolling average calculation, and an exemption from the IRB ratio cap on its FYE December 31, 2012 cost report. On its FYE December 31, 2013 cost report, Hospital T would report a permanent cap increase and any remaining displaced residents would be included in the rolling average calculation. During the process of reviewing the applications for slots after a hospital closes, be it for hospitals that have already closed between March 23, 2008 and August 3, 2010 (the first round of applications), or for future hospital closures, we would still assign the slots to hospitals qualifying under Ranking Criteria One, Two, and Three in descending order. We agree with the commenter that it is very important that the residency slots from closed hospitals that are not redistributed through Ranking Criteria One through Three should be redistributed to hospitals requesting a residency cap increase as quickly as possible.

The commenter recommended that CMS ensure that permanent resident cap increases awarded via Ranking Criteria Four through Eight are redistributed on an annual basis following the completion of their use for the purpose of supporting displaced residents. First, we note that in this final rule, we have consolidated and reduced the number of Ranking Criteria from Eight to Seven. The slots that we would be distributing could be based on slots attributable to displaced residents for which the temporary cap adjustments to their receiving hospitals would expire upon graduation of those residents from their programs. We would have to hold these slots in reserve, and release them for permanent assignment to qualifying hospitals on an annual basis, as the commenter suggests, as each of those residents graduates. With each hospital closure, we will request and receive information from the closed hospital if possible, from the Medicare contractors, and the hospitals that take in the displaced residents, regarding, at a minimum, the FTE number of residents that are displaced, the programs the residents are in, and the program year in which each resident was at the time of the hospital closure, which would help us determine the number of years each displaced resident has to complete his or her training. Using this information, at the time that we are reviewing the applications, we will determine the point (typically July 1) at which each qualifying hospital will receive the FTEs permanently, and we will inform the qualifying hospital that effective with a certain graduation date, possibly in the past, but likely in the future, the qualifying hospital's FTE resident caps would be permanently increased by a specified number, as appropriate. When that graduation date arrives, the permanent cap increase will occur automatically for the qualifying hospital—the hospital need not wait for further adjudication by CMS. Depending on the length of the particular program and the number of years left for the displaced residents to train, it may take several years (that is, several graduation dates) until a hospital receives its full cap increase under section 5506. In this way, although some hospitals will not receive their total permanent cap increases "immediately," they will at least know the date(s) in the future that they will receive their permanent cap adjustments, and those cap adjustments will occur automatically. Of course, because residents who are closer to the completion of their program at the time they are displaced by the hospital closure will graduate sooner than those residents closer to the beginning of their training, their FTE slots are more "valuable." We would assign the slots of those residents graduating sooner to those hospitals ranked higher, in descending order.

The following example illustrates how the permanent assignment of slots would be effectuated when displaced residents are involved. Hospital G has an FTE resident cap of 8 and closes on December 31, 2010. It had 8 residents in an internal medicine program. Hospital J currently has an internal medicine program with 15 residents, and wants to expand it permanently, and on January 1, 2011, Hospital J expands its internal medicine program and seamlessly assumes 5 internal medicine residents from Hospital G. The remaining 3 internal medicine residents are accepted by hospitals in various locations solely to complete their training. In the section 5506 application process, Hospital J is located in the same CBSA as Hospital G and it applies for 5 slots and qualifies

to receive those slots under Ranking Criterion Three. Assume CMS determines on January 1, 2012 that Hospital J may receive those slots permanently. Hospital J has a September 30 FYE. Hospital J had been receiving temporary cap adjustments and the exemption from the rolling average and the IRB ratio cap for the 5 FTEs for its cost reporting period ending September 30, 2011. On January 1, 2012, the FTE cap adjustment is permanent for Hospital J's entire FYE September 30, 2012 cost report, and the exemption from the rolling average does not apply to Hospital J's FYE September 30, 2012 cost report. Of the 3 displaced residents, John Doe, was a PGY1 when Hospital G closed, and is expected to graduate on June 30, 2013. Jane Doe was a PGY2 and is expected to graduate on June 30, 2012. Kreshen Doe was a PGY3 and is expected to graduate on June 30, 2011. Hospital M is also located in the same CBSA as Hospital G, which is a HPSA, and applies to receive 1 slot under Ranking Criterion Five to expand a primary care program. Hospital N is located in a CBSA that is contiguous to the CBSA that Hospital G is located in, it is not located in a HPSA, and is requesting 1 slot under Ranking Criterion Six to expand a primary care program. Hospital P is located in the same State but not the same CBSA as Hospital G, and applies under Ranking Criterion Four for 1 slot to start a geriatrics fellowship.

On January 1, 2012, CMS determines that Hospital M receives the slot associated with PGY3 Kreshen Doe, who finished his training at another hospital on June 30, 2011. (The hospital that took in Kreshen Doe until he finished his training received a temporary cap adjustment under § 413.79(h), which ended on June 30, 2011). Thus, Hospital M's permanent FTE cap increase is effective July 1, 2011. On January 1, 2012, CMS also determines that Hospital N will receive the slot associated with PGY2 Jane Doe, and we inform Hospital N that its FTE cap will increase permanently effective July 1, 2012. Finally, on January 1, 2012, CMS determines that Hospital P will receive the slot associated with PGY1 John Doe, and we inform Hospital P that its FTE cap will increase permanently effective July 1, 2013. (We note that this example is for illustrative purposes only and we are not implying that all cap determinations and assignments would be made according to the timeline used in this example).

The example above described how the slots would be awarded permanently on an annual basis under Ranking Criteria Four through Seven in the instance where temporary cap increases are being used in accordance with § 413.79(h) by various hospitals and we would need to ensure that those residents graduated before permanently assigning the slots to avoid duplication in the FTE caps. In the scenario where a hospital closes but for whatever reason, there are no hospitals that receive temporary cap adjustments under § 413.79(h), the effective date of the permanent cap increases would be prospectively from the date of the determination. For example, a hospital closes on April 30, 2013. Another hospital applies under Ranking Criterion Six and will use all the requested slots to start a general surgery program. The hospital shows that it can meet the demonstrated likelihood requirements to fill those slots. We determine on January 15, 2014 that the hospital may receive the slots, and its permanent cap increase is effective on January 15, 2014.

We will be making changes to the Medicare cost report, Worksheet E, Part A for IME, and Worksheet E–3, Part IV for direct GME, (and Worksheet E–4, the direct GME worksheet on CMS–2552–10), to accommodate the increases to the FTE resident caps of hospitals that receive slots under section 5506.

Comment: One commenter support CMS' implementation of the Congressional mandate that there be no duplication of FTE cap slots as provided at section 5506(d). The commenter asked that the Secretary give greater priority to hospitals that could have availed themselves of the application of temporary cap adjustments at § 413.79(h) but did not because, in this instance, there is "good assurance" that there is no duplication of FTE slots.

Response: We believe that the commenter misunderstood the Congressional mandate that there be no duplication of FTE slots as provided at section 5506(d). This Congressional mandate applies not only to the hospital applying for slots or that took over the program, but rather it applies across all hospitals. It is important to note that although the commenter's hospital may not have availed itself to temporary cap adjustments at § 413.79(h), other hospitals may have taken in residents and received temporary cap adjustments for the same program. Therefore, slots associated with that program cannot be distributed permanently until it is known that any and all temporary cap adjustments for those slots have expired.

After consideration of public comments we received, we are revising our proposal regarding the application of the rolling average and the IRB ratio cap. Specifically, *except* for the case of a brand new hospital taking over a program(s), or an acquisition which we describe under the definition of "hospital closure" (75 FR 46422), where the new owner receives a new provider agreement and operates the hospital exactly as it had been operated prior to the acquisition, we believe that it would still be appropriate to allow a hospital that ultimately would qualify to receive slots permanently under any of the ranking criteria and that took in displaced residents to receive temporary cap adjustments and, in a limited manner, exemptions from the rolling average and IRB ratio cap (subject to the regulations at § 412.105(a)(1)(iii)), as discussed above.

8. Other Payment Issues Regarding Hospitals that Receive Increase in FTE Caps Based on Slots from Closed Hospitals

In the proposed rule, we noted that section 1886(h)(4)(H)(vi) of the Act, as added by the Affordable Care Act, makes no reference to section 1886(h)(4)(G) or 1886(d)(5)(B)(vi)(II) of the Act, which are the provisions concerning the rolling average count of FTE residents. Furthermore, there is no mention of section 1886(d)(5)(B)(vi)(I) of the Act, the provision regarding the cap on the IME resident-to-bed ratio, in section 1886(h)(4)(H)(vi) either. That is, the statute does not provide for an exclusion from application of the rolling average for residents counted as a result of FTE cap increases under section 1886(h)(4)(H)(vi) of the Act, nor does the statute exempt these residents from the application of the cap on the IME resident-to-bed ratio. In light of the absence of a specific directive in section 1886(h)(4)(H)(vi) of the Act exempting those residents from application of the rolling average for direct GME and IME, and the cap on the IME resident-to-bed ratio, and with no apparent reason to treat residents counted as a result of the FTE cap increases under section 1886(h)(4)(H)(vi) of the Act differently, in the August 3, 2010 proposed rule (75 FR 46425), we proposed to require that if a hospital increases its direct GME or IME FTE count of residents as a result of an FTE resident cap increase under section 1886(h)(4)(H)(vi) of the Act, those FTE residents would be immediately subject to the rolling average calculation and the cap on the IME resident-to-bed ratio.

We also note that section 1886(h)(4)(H)(vi) of the Act for direct GME and section 1886(d)(5)(B)(v) of the Act for IME does not specify use of a special direct GME PRA or IME multiplier for residents counted by a hospital under an FTE cap increase

received after the closure of another hospital. Therefore, we proposed that residents counted by a hospital under a permanent adjustment to the hospital's FTE resident caps under the provisions of section 5506 of the Affordable Care Act would be paid for using the receiving hospital's otherwise applicable direct GME PRA (which is hospital-specific) and IME multiplier (which is the same for all hospitals). (Further, as we proposed with respect to FTE resident cap increases awarded under section 5503 (section XXI.D. of this preamble), we proposed that these slots may not be used as part of the aggregate FTE resident cap under a Medicare GME affiliation agreement. However, as we explained in response to comments above, we are allowing slots awarded under section 5506 to be included in a Medicare GME affiliation agreement after a 5-year period).

Comment: Commenters opposed CMS' proposal to subject FTE resident slots received under section 5506 from a closed hospital to the three-year rolling average count and inclusion in the IRB ratio cap under Ranking Criteria One through Three.

Response: As we explained above in response to comments under the "No Duplication of FTE Slots" section, in this final rule, we are modifying our proposed position regarding the rolling average and the IRB ratio cap. Specifically, except for the case of a brand new hospital taking over a program(s), or an acquisition which we describe under the definition of "hospital closure" (75 FR 46422), where the new owner receives a new provider agreement and operates the hospital exactly as it had been operated prior to the acquisition, we believe that it would still be appropriate to allow a hospital that ultimately would qualify to receive slots permanently under any of the Ranking Criteria and that took in displaced residents to receive temporary cap adjustments and, in a limited manner, exemptions from the rolling average and IRB ratio cap (subject to the regulations at § 412.105(a)(1)(iii)).

Comment: Two commenters requested clarification regarding which direct GME PRA and IME intern-and-resident to bed (IRB) ratio cap would be used for the hospital assuming the programs of the closed hospital, particularly if the hospital assumed *all* of the residency programs from the closed hospital.

Response: In the case where a hospital assumes the programs of a closed hospital, and seamlessly operates those programs on the same site as the closed hospital, but did not assume the provider agreement of the closed hospital, it is then a new hospital, and therefore does not have its own PRA or resident and bed history for use in the IRB ratio cap. A new PRA would have to be calculated in accordance with regulations at § 413.77(e), and the IRB ratio cap would not apply for the new hospital's first cost reporting period under § 412.105(f), but would apply for the hospital's second cost reporting period. Furthermore, in the new hospital's first cost reporting period, there would be no rolling average calculation, and in the second cost reporting period, there would be a 2-year rolling average calculation. In the third cost reporting period, the rolling average would be based on three years of cost report data. However, in the case where a hospital assumes one or more programs and does not operate them on the site of the closed hospital, but instead operates the program(s) on the site of its own hospital, then the PRA of the applying hospital would be used, and the bed counts and FTE counts of the applying hospital would be used in the IRB ratio cap calculation.

9. Other Comments and Responses Regarding Section 5506

Comment: Two commenters noted that section 5506 appears to be silent as to whether, if a closed hospital also received slots under section 422 of the MMA, those 422 slots are subject to redistribution under section 5506 along with the closed hospital's 1996 FTE resident cap slots. The commenters believed Congress intended for all residency cap slots to be redistributed from a closed hospital including section 422 slots. One commenter recognized that the IME adjustment and the direct GME Per Resident Amount to be used for section 422 cap slots differs from the rates used for regular cap slots, which could make the 422 cap slots less attractive to qualifying hospitals. Therefore, the commenter encouraged CMS to consider distributing the 422 slots last (to hospitals lower in the priority order).

Response: We agree with the commenter. In implementing section 1886(h)(4)(H)(vi)(IV) of the Act, we proposed to interpret "the number of resident positions" to mean the number that is equal to the IME and direct GME FTE resident caps of a hospital that closed, or will close. Because section 422 of the MMA provided many hospitals with additional IME and/or direct GME FTE resident cap slots, those additional cap slots will also be subject to redistribution under section 5506. As the commenter mentioned, the IME adjustment and the direct GME PRA used for section 422 cap slots differs from the rates used for regular cap slots, making the section 422 cap slots "less attractive" to qualifying hospitals. Accordingly, we agree with the commenter's suggestion to distribute section 422 slots only after all regular cap slots from the closed hospital are assigned for redistribution. However, hospitals that receive section 422 slots under section 5506 would be paid for those slots using the section 422 direct GME PRA and IME multiplier. If a hospital that closes has both regular FTE caps and section 422 caps, we envision the redistribution of all those cap slots in the following method. We would review and rank the applications and assign as many regular slots as we can to qualifying hospitals based on the ranking order, in a descending manner. Once the regular slots are all assigned, we would then assign all the section 422 slots, continuing to follow the ranking priorities in descending order. If the remaining number of requests for slots from qualified hospitals of equal rank exceeds the amount of section 422 cap slots available, we would prorate the remaining section 422 slots among those equally ranked hospitals (the same way we would prorate the remaining regular FTE cap slots in the instance where a closed hospital only had regular FTE cap slots but the requests exceed the number of regular FTE cap slots available). We would prorate as follows: [(total number of available slots remaining/total number of requested slots remaining) × number of slots requested by Hospital A] and [(number of slots remaining/total number of requested slots remaining) × number of slots requested by Hospital B] and so forth.

It could also be possible that, in distributing the slots from a single closed hospital that had section 422 cap slots, there may not be sufficient regular cap slots to satisfy all the requests from hospitals of equal rank, in which case we would have to prorate both the regular cap slots and the section 422 cap slots. For example, assume Closed Hospital had a 1996 FTE cap of 50, and a section 422 FTE cap of 25. After ranking all the applicants, we assign 40 of the slots to qualified hospitals without any proration. Ten of the 1996 FTE cap slots remain, while requests for 50 slots from Hospitals Y and Z of equal rank still remain as well. Hospital Y requested and qualifies for 30 slots and Hospital Z requested and qualifies for 20 slots. In this case, we would prorate and assign the remaining ten 1996 FTE cap slots as follows: [(total number of available 1996 slots remaining/total number of requested slots remaining) × number of slots requested by Hospital

Y] and [(total number of available 1996 slots remaining/total number of requested slots remaining) × number of slots requested by Hospital Z] etc. In this example, this would mean: [(10/50) × 30] = 6 of the 1996 slots for Hospital Y, and [(10/50) × 20] = 4 of the 1996 slots for Hospital Z. Thus, only 10 out of the 50 requested slots have been assigned to Hospitals Y and Z (Hospital Y has 24 requested slots unfulfilled, and Hospital Z has 16 of its requested slots unfulfilled), and there are still 25 section 422 cap slots available. We would prorate the 25 section 422 slots to Hospitals Y and Z as follows: [(number of section 422 slots remaining/total number of requested slots remaining) × remaining number of slots requested by Hospital Y] and [(number of section 422 slots remaining/total number of requested slots remaining) × remaining number of slots requested by Hospital Z]. In this example, this would mean: [(25/40) × 24] = 15 of the section 422 slots for Hospital Y, and [(25/40) × 16] = 10 of the section 422 slots for Hospital Z.

It is also important to consider how the redistribution process would work in the instance where a hospital that closes is training residents above its FTE caps at the time it closes, and there are multiple hospitals that assume an entire program or programs from that closed hospital. In such a case, not only will the number of requested slots from all applicants exceed the amount of FTEs in the FTE caps of the hospital that closed, but the number of FTE residents that are being assumed also exceeds the closed hospital's FTE caps. For example, a closed hospital was training 700 FTE residents, but its FTE resident cap was 500. Hospital K assumes the entire program for 680 FTEs, and Hospital L assumes one program of 20 FTEs. Both hospitals qualify under Ranking Criterion One. As a first step, before we begin to assign any slots to the qualified applicants, we would first prorate *each* of the qualified applicants' requests. We would then prorate the closed hospital's IME and direct GME FTE caps as follows:

Hospital K: (680 FTEs assumed/700 total FTEs) × closed hospital's FTE resident cap of 500 = 485.71 slots.

Hospital L: (20 FTEs assumed/700 total FTEs) × closed hospital's FTE resident cap of 500 = 14.29 slots.

485.71 + 14.29 = 500.

Comment: One commenter stated that they understand that by law they can only receive a permanent cap for interns and residents from hospitals that closed or close on or after March 23, 2008. However, the commenter recommended that in future rulemaking CMS should take into consideration hospitals that have consistently taken in interns and residents from closed hospitals (and are over their cap) prior to March 23, 2008 and make those temporary cap adjustments into permanent caps.

Response: We appreciate this suggestion to consider hospitals that have consistently taken in interns and residents from closed hospitals prior to March 23, 2008 in future rulemaking. However, as noted by the commenter, CMS is bound by statute in this instance and thus can only make permanent cap adjustments as a result of hospitals that have closed on or after March 23, 2008.

Comment: Commenters asked CMS to clarify whether a nonteaching hospital that takes displaced residents and receives permanent cap slots through the closed hospital redistribution program may still start a new program under § 413.79(e) and proceed through the normal 3-year process of building a permanent resident cap.

Response: Whether a nonteaching hospital could receive slots under section 5506 and still not be precluded from still qualifying for a new program cap adjustment under § 413.79(e) depends upon which ranking criteria the hospital applies for slots under 5506. In the instance where a non-teaching hospital is assuming entire program(s) and receives a permanent cap increase for the program(s) under Ranking Criterion One, we do not believe that hospital should still have the opportunity to receive a further cap increase under § 413.79(e). Such a hospital should decide whether it wants to assume an entire existing program(s) from a closed hospital and receive slots under section 5506, or whether it wants to reserve its rights to start new programs and therefore, not request (and receive) slots under section 5506. Nonteaching hospitals that would qualify to request slots under the other ranking criteria could still qualify to start new programs and receive a cap increase under § 413.79(e). In general, we note that if a non-teaching hospital is simply interested in starting a new program and qualifies for a new program cap adjustment under § 413.79(e), the non-teaching hospital should not be applying for slots under 5503 or 5506 for the FTEs in the new program, because there is no need for it to do so. It would receive slots under the normal mechanism for new teaching hospitals, in accordance with the regulations at § 413.79(e).

Comment: One commenter stated that CMS should clearly specify that a hospital operating below its cap at the time it began training displaced residents, and thus did not receive a temporary increase in its cap under the existing rules, would be considered under section 5506. The commenter noted that a hospital may subsequently implement a plan to expand enrollment in its existing program, causing it to operate above its cap. The commenter expressed that this concern is particularly salient for New York hospitals that participated in the New York Medicare GME Demonstration Program.

Response: All hospitals requesting slots under section 5506 will be considered when distributing slots from a closed hospital. It is quite possible that a hospital could qualify for a cap adjustment under section 5506 even if it did not receive a temporary cap increase at the time it began training displaced residents, because at that time, it had room below its caps. A hospital that accepted displaced residents in the past from a hospital or program that closed would only have been eligible to receive a temporary cap adjustment if it was already training residents in excess of its caps. Subsequent to accepting those displaced residents, the hospital may decide to permanently expand the number of residents it is training to an amount in excess of its caps. If such a hospital can show a demonstrated likelihood to fill slots within 3 years, and if the applying hospital can show that it is expanding in excess of its caps, then the applying hospital could apply under section 5506, but only for the incremental amount in excess of its caps that is needed. It is important to note, therefore, that a hospital that currently has room under its caps to expand its program to a level that it desires would not be considered for receipt of additional slots under section 5506.

10. Application—No Reopening of Settled Cost Reports

Section 5506(c) of the Affordable Care Act specifies that the changes made by the provisions of sections 5506(a) and (b) should not be applied in a manner that would require the reopening of settled cost reports for which there is not a jurisdictionally proper appeal pending on direct GME or IME payments as of March 23, 2010 (the date of the enactment of Pub. L. 111–148). In the August 3, 2010 proposed rule (75 FR 46425), we proposed to reflect this provision in the proposed revisions under § 412.105(f)(1)(ix)(B) and § 413.79(o)(2)(ii) of the regulations. We proposed to interpret "jurisdictionally proper appeal pending" on direct GME or IME payments to mean that in order for a hospital to request a change to its FTE count, direct GME or IME

respectively, the "jurisdictionally proper appeal pending" must be specific to direct GME or IME respectively. For example, in order for a hospital to increase its FTE count with regard to an Affordable Care Act provision that is unique to IME (such as inclusion in the IME count of didactic time occurring in the hospital as specified by new section 1886(d)(5)(B)(x)(II) of the Act), the hospital's "jurisdictionally proper appeal pending" must be on an IME issue; IME FTEs or the available bed count. However, if the hospital's "pending, jurisdictionally proper appeal" is on an issue that only affects direct GME payments, such as the initial residency period or the Medicare patient load, that appeal would not be sufficient in order for the hospital to increase its FTE count with regard to an Affordable Care Act provision that is unique to IME, such as didactic time in the hospital setting.

We did not receive any public comments specific to this section. However, after reviewing public comments received regarding the "No Duplication of FTE Slots" proposal, and the timing and effective dates of slots awarded permanently under section 5506, we have reconsidered the manner in which we interpreted section 5506(c) of the Affordable Care Act. Because section 5506 was enacted on March 23, 2010, and instructs the Secretary to redistribute slots from teaching hospitals that closed on or after March 23, 2008, there are some retroactive aspects to this provision. Furthermore, as we explained in response to comments above in the section on "No Duplication of FTE Slots," there are instances where we would determine that an applying hospital's FTE resident cap would increase permanently effective with the fiscal year begin date of the cost reporting period that follows the cost reporting period in which the closure occurred. In contemplating the meaning and implications of section 5506(c), we have considered that, particularly for closures that occurred in 2008 or 2009, it is possible that those cost reporting periods are closed, and 180 days since the Notice of Program Reimbursement (NPR) was issued has passed as well. Section 5506(c) states that the provision should not be applied in a manner that would require the reopening of settled cost reports for which there is not a pending, jurisdictionally proper appeal on direct GME or IME payments as of March 23, 2010. Therefore, section 5506(c) reminds the Secretary that in the absence of an appeal on the 2008 or 2009 cost report of the applying hospital, the Medicare contractor would not assign a permanent cap increase to cost reports that are beyond the 180-day appeal period. Instead, the permanent cap increase would take effect on the next cost report that has not yet been settled.

11. No Administrative or Judicial Review Under Section 5506

We inadvertently omitted a discussion from the proposed rule regarding section 5506(e), which amended section 1886(h)(7)(E) of the Act (as also amended by section 5503(a)) to state, "There shall be no administrative or Judicial review * * * with respect to determinations made under this paragraph, paragraph (8), or paragraph (4)(H)(vi)." The fact that Congress included this language clearly means that the Congress intended for our determination with regard to FTE resident cap redistributions under section 1886(h)(4)(H)(vi) of the Act as added by section 5506(a) to be final, and not subject to appeal. Because of this statutory language, we do not believe it would be appropriate to allow hospitals (or CMS) to appeal determinations concerning the FTE cap redistributions under section 1886(h)(4)(H)(vi) of the Act.

LIST OF TEACHING HOSPITALS THAT HAVE CLOSED ON OR AFTER MARCH 23, 2008 AND BEFORE AUGUST 3, 2010

Provider No.	Provider name	Terminating date	DGME cap	IME cap	Sec. 422 Increase/ decrease DGME	Sec. 422 Increase/ decrease IME	CBSA

CMS Evaluation Form

As Part of the Application for the Increase in a Hospital's FTE Cap(s) under Section 5506 of the Affordable Care Act: Preservation of FTE Cap Slots from Teaching Hospitals that Close

Directions: Please fill out the information below for each residency program for which the applicant hospital intends to use the increase in its FTE cap(s). The applicant hospital is responsible for complying with the other requirements listed in the CY 2011 Hospital Outpatient Prospective Payment System rule in order to complete its application for the increase in its FTE cap(s) under section 5506 of Public Law 111-148.

NAME OF HOSPITAL: _____

MEDICARE PROVIDER NUMBER: _____

NAME OF MEDICARE CONTRACTOR: _____

NAME OF SPECIALTY TRAINING PROGRAM: _____

(Check one): □ Allopathic Program □ Osteopathic Program

NUMBER OF FTE SLOTS REQUESTED FOR PROGRAM:

Direct GME: _____ **IME:** _____

Section A: Demonstrated Likelihood of Filling the FTE Slots

Demonstrated Likelihood: Hospital must provide documentation to demonstrate the likelihood of filling requested slots under section 5506 within 3 years. For example, the applying hospital would document that it does not have sufficient room under its FTE resident caps to take in the additional residents, and has approval from the relevant accrediting body to take over the closed hospital's residency program(s), or

expand its own residency program(s) to reflect a permanent commitment to train additional residents.

(1) The hospital does not have sufficient room under its direct GME FTE cap or IME FTE cap, or both, and will establish a newly approved residency program. **(The hospital must check at least one of the following, if applicable.)**

□ Application for approval of the new residency program has been submitted to the ACGME, AOA or the ABMS. **(The hospital must attach a copy.)**

□ The hospital has submitted an institutional review document or program information form concerning the new program in an application for approval of the new program. **(The hospital must attach a copy.)**

□ The hospital has received written correspondence from the ACGME, AOA or ABMS acknowledging receipt of the application for the new or expanded program, or other types of communication from the accrediting bodies concerning the new program approval process (such as notification of site visit). **(The hospital must attach a copy.)**

- The hospital may submit documentation demonstrating that it has made a commitment to start a new program.

(2) Hospital does not have sufficient room under its direct GME FTE cap or IME FTE cap, or both, and has or is seeking approval from the relevant accrediting body to take over the closed hospital's residency program(s), or expand its own residency program(s) to reflect a permanent commitment to train additional residents. (**The hospital must check at least one of the following, if applicable.)**

□ Application for approval of the residency program has been submitted to the ACGME, AOA or the ABMS. **(The hospital must attach a copy.)**

□ The hospital has submitted an institutional review document or program information form concerning the program in an application for approval of the program. **(The hospital must attach a copy.)**

□ The hospital has received written correspondence from the ACGME, AOA or ABMS acknowledging receipt of the application for the program, or other types of communication from the accrediting bodies concerning the program approval process (such as notification of site visit). **(The hospital must attach a copy.)**

- The hospital is seeking approval from the relevant accrediting body to take over the closed hospital's residency program(s), and the hospital may submit documentation demonstrating that it has made a commitment to take over the program(s).

(3) Hospital will likely fill the slots requested. **(The hospital must check the following, if applicable.)**

□ The hospital does not have sufficient room under its direct GME FTE cap or IME FTE cap, or both. **(Copies of EACH of the following must be attached.)**

- Copies of the Medicare cost reports that have been most recently submitted to the Medicare contractor documenting on Worksheet E, Part A, Worksheet E-3, Part IV, and Worksheet E-3, Part VI the resident counts and FTE resident caps for both direct GME and IME.

(4) Applying hospital was listed as a participant of a Medicare GME affiliated group on the most recent Medicare GME affiliation agreement of which the closed

hospital was a member before the hospital closed, and under the terms of that Medicare GME affiliation agreement, the applying hospital received slots from the hospital that closed, and the applying hospital will use the additional slots to continue to train at least the number of FTE residents it had trained under the terms of the Medicare GME affiliation agreement. If the most recent Medicare GME affiliation agreement of which the closed hospital was a member before the hospital closed was with a hospital that itself has closed or is closing, the applying hospital was listed as a participant in the next most recent Medicare GME affiliation agreement (but not one which was entered into more than 5 years prior to the hospital's closure) of which the first closed hospital was a member before the hospital closed, and that applying hospital received slots from the closed hospital under the terms of that affiliation agreement. **(Copies of EACH of the following must be attached.)**

- Copies of the recent Medicare GME affiliation agreement of which the applying hospital and the closed hospital were a member of before the hospital closed.
- Copies of the Medicare cost reports that have been most recently submitted to the Medicare contractor documenting on Worksheet E, Part A, Worksheet E-3, Part IV and Worksheet E-3, Part VI the resident counts and FTE resident caps for both direct GME and IME for the relevant cost reporting periods.
- Copies of the most recent accreditation letters for all of the hospital's training programs in which the hospital had a shared rotational arrangement (as defined at §413.75(b)) with the closed hospital.

Section B. Level Priority Category

(Place an "X" in the appropriate box that is applicable to the level priority category that describes the applicant hospital.)

- □ First, to hospitals located in the same core-based statistical area (CBSA) as, or in a CBSA contiguous to, the hospital that closed.
- □ Second, to hospitals located in the same State as the closed hospital.
- □ Third, to hospitals located in the same region as the hospital that closed.
- □ Fourth, if the slots have not yet been fully distributed, to qualifying hospitals in accordance with the criteria established under section 5503, "Distribution of Additional Residency Positions"

Section C. Evaluation Criteria

(Place an "X" in the box for each criterion that is appropriate for the applicant hospital and for the program for which the increase in the FTE cap is requested.)

□ Ranking Criterion One. *The applying hospital is requesting the increase in its FTE resident cap(s) because it is assuming (or assumed) an entire program (or programs) from the hospital that closed, and the applying hospital is continuing to operate the program(s) exactly as it had been operated by the hospital that closed (that is, same residents, possibly the same program director, and possibly the same (or many of the same) teaching staff).*

□ Ranking Criterion Two. *The applying hospital was listed as a participant of a Medicare GME affiliated group on the most recent Medicare GME affiliation agreement of which the closed hospital was a member before the hospital closed, and*

under the terms of that Medicare GME affiliation agreement, the applying hospital received slots from the hospital that closed, and the applying hospital will use the additional slots to continue to train at least the number of FTE residents it had trained under the terms of the Medicare GME affiliation agreement. If the most recent Medicare GME affiliation agreement of which the closed hospital was a member before the hospital closed was with a hospital that itself has closed or is closing, preference would be given to an applying hospital that was listed as a participant in the next most recent Medicare GME affiliation agreement (but not one which was entered into more than 5 years prior to the hospital's closure) of which the first closed hospital was a member before the hospital closed, and that applying hospital received slots from the closed hospital under the terms of that affiliation agreement.

□ Ranking Criterion Three. *The applying hospital took in residents displaced by the closure of the hospital, but is not assuming an entire program or programs, and will use the additional slots to continue training residents in the same programs as the displaced residents, even after those displaced residents complete their training (that is, the applying hospital is permanently expanding its own existing programs).*

□ Ranking Criterion Four. *The applying hospital does not fit into Ranking Criteria 1, 2, or 3, and will use additional slots to establish a new or expand an existing geriatrics residency program.*

1. Ranking Criterion Five*: The applying hospital does not meet ranking criterion 1, 2, or 3, is located in a HPSA, and will use all the additional slots to establish or expand a primary care or general surgery residency program.*

2. Ranking Criterion Six*: The applying hospital does not meet ranking criterion 1, 2, or 3, is not located in a HPSA, and will use all the additional slots to establish or expand a primary care or general surgery residency program.*

3. Ranking Criterion Seven*: The applying hospital seeks the slots for purposes that do not fit into any of the above ranking criteria.*

BILLING CODE 4120–01–C

Application Process and CMS Central Office and Regional Office Mailing Addresses for Receiving Increases in FTE Resident Caps

In order for hospitals to be considered for increases in their FTE resident caps, each qualifying hospital must submit a timely application. The following information must be submitted on applications to receive an increase in FTE resident caps:

- The name and Medicare provider number, and Medicare contractor (to which the hospital submits its cost report) of the hospital.
- The total number of requested FTE resident slots for direct GME or IME, or both.
- A completed copy of the CMS Evaluation Form for each residency program for which the hospital intends to use the requested increase in FTE residents.
- Source documentation to support the assertions made by the hospital on the CMS Evaluation Form.
- FTE resident counts for direct GME and IME and FTE resident caps for direct GME and IME reported by the hospital in the most recent as-filed cost report. (Include copies of Worksheets E, Part A, E–3, Part IV, *and if a hospital received an increase to its FTE cap(s) under section 422 of the MMA*, a copy of E–3, Part VI).
- An attestation, signed and dated by an officer or administrator of the hospital who signs the hospital's Medicare cost report, of the following information:

"I hereby certify that I understand that misrepresentation or falsification of any information contained in this application may be punishable by criminal, civil, and administrative action, fine and/or imprisonment under federal law. Furthermore, I understand that if services identified in this application were provided or procured through payment directly or indirectly of a kickback or were otherwise illegal, criminal, civil, and administrative action, fines and/or imprisonment may result. I also certify that, to the best of my knowledge and belief, it is a true, correct, and complete application prepared from the books and records of the hospital in accordance with applicable instructions, except as noted. I further certify that I am familiar with the laws and regulations regarding Medicare payment to hospitals for the training of interns and residents."

The completed application and supporting documentation (as described above) must be submitted to the CMS Central Office and the CMS Regional Office for the region in which the applicant hospital is located. The addresses of the CMS Central Office and Regional Offices are listed below.

CMS Central and CMS Regional Office Mailing Addresses for Applications for Increases in FTE Resident Caps

Central Office

Centers for Medicare and Medicaid Services (CMS), Director, Division of Acute Care, 7500 Security Boulevard, Mail Stop C4–08–06, Baltimore, Maryland 21244, (410) 786–4548.

Region I (Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont)

Centers for Medicare and Medicaid Services (CMS), Associate Regional Administrator, Division of Financial Management and Fee for Service Operations, Region I, JFK Federal Building, Room 23275, Boston, MA 02203, Phone: (617) 565–1331.

Region II (New York, New Jersey, U.S. Virgin Islands, and Puerto Rico)

Centers for Medicare and Medicaid Services (CMS), Associate Regional Administrator, Division of Financial Management and Fee for Service Operations, Region II, 26 Federal Plaza, 38th Floor, New York, NY 10278, Phone: (212) 616–2545.

Region III (Delaware, Maryland, Pennsylvania, Virginia and West Virginia, and the District of Columbia)

Centers for Medicare and Medicaid Services (CMS), Associate Regional Administrator, Division of Financial Management and Fee for Service Operations, Region III, Public Ledger Building, Suite 216, 150 South Independence Mall West, Philadelphia, PA 19106, Phone: (215) 861–4140.

Region IV (Alabama, North Carolina, South Carolina, Florida, Georgia, Kentucky, Mississippi, and Tennessee)

Centers for Medicare and Medicaid Services (CMS), Associate Regional Administrator, Division of Financial Management and Fee for Service Operations, Region IV, Atlanta Federal Center, 61 Forsyth Street, SW., Suite 4T20, Atlanta, GA 30303–8909, Phone: (404) 562–7300.

Region V (Illinois, Indiana, Michigan, Minnesota, Ohio, and Wisconsin)

Centers for Medicare and Medicaid Services (CMS), Associate Regional Administrator, Division of Financial Management and Fee for Service Operations, Region V, 233 North Michigan Avenue, Suite 600, Chicago, IL 60601, Phone: (312) 886–6432.

Region VI (Arkansas, Louisiana, New Mexico, Oklahoma, and Texas)

Centers for Medicare and Medicaid Services (CMS), Associate Regional Administrator, Division of Financial Management and Fee for Service Operations, Region VI, 1301 Young Street, Suite 714, Dallas, TX 75202, Phone: (214) 767–6423.

Region VII (Iowa, Kansas, Missouri, and Nebraska)

Centers for Medicare and Medicaid Services (CMS), Associate Regional Administrator, Division of Financial Management and Fee for Service Operations, Region VII, Richard Bolling Federal Building, Room 235, 601 East 12th Street, Kansas City, MO 64106, (816) 564–1843.

Region VIII (Colorado, Montana, North Dakota, South Dakota, Utah and Wyoming)

Centers for Medicare and Medicaid Services (CMS), Associate Regional Administrator, Division of Financial Management and Fee for Service Operations, Region VIII, Colorado State Bank Building, 1600 Broadway, Suite 700, Denver, CO 80202, Phone: (303) 844–2111.

Region IX (Arizona, California, Hawaii, and Nevada and Territories of American Samoa, Guam and the Commonwealth of the Northern Mariana Islands)

Centers for Medicare and Medicaid Services (CMS), Associate Regional Administrator, Division of Financial Management and Fee for Service Operations, Region IX, 90 7th Street, Suite 5–300 (SW), San Francisco, CA 94103–6708, Phone: (415) 744–3501.

Region X (Alaska, Idaho, Oregon, and Washington)

Centers for Medicare and Medicaid Services (CMS), Associate Regional Administrator, Division of Financial Management and Fee for Service Operations, Region X, 2201 Sixth Avenue, MS/RX–46, Seattle, WA 98121, Phone: (206) 615–2094.

F. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995, we are required to provide 60-day notice in the **Federal Register** and to solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. In order to fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

In the August 3, 2010 proposed rule (75 FR 46436), we solicited public comments on each of the issues outlined above on the GME and IME provisions discussed in section XVII. Of the proposed rule (now discussed in sections XXI.A. through E. of this final rule) that contained information collection requirements, as discussed below.

Existing regulations at § 413.78 outline the requirements for the determination of the total number of FTE residents in determining direct GME payments to hospitals. Section XVII.B.3. of the preamble of the proposed rule (now section XXI.B.3. of this final rule) discussed the requirement for hospitals that share the costs of resident training in nonprovider settings, as permitted by the Affordable Care Act, to count a proportional share of the time and to record that proportion in a written agreement. We proposed that this proportion must be included on a distinct written agreement even for hospitals that have been paying nonprovider sites concurrently without a written agreement as described in existing regulations. The burden associated with this requirement is the time and effort put forth by the hospital to prepare a written agreement. We estimate it would take one hospital 15 minutes to meet this requirement. Hospitals that already have a written agreement with a nonprovider site may include the proportion on that existing agreement.

In section XVII.B.4. of the preamble of the proposed rule (now section XXI.B.4. of this final rule), we discussed the requirement under the Affordable Care Act for hospitals to maintain records of the amount of time that their residents spend training in nonprovider sites, and to compare that time to the time spent by their residents in nonprovider sites in a base year as the Secretary may specify. We believe that a large part of the information that hospitals would be required to record for the purposes of this provision is contained in rotation schedules, which all hospitals are already required to maintain. Therefore, we do not believe that this requirement poses an undue administrative burden for the purposes of the PRA.

Existing regulations at § 412.105 and § 413.79 outline the requirements for the determination of the number of FTE residents for IME payments to hospitals and the weighted number of FTE residents for direct GME payments to hospitals. In sections XVII.B.4. and 5. of the preamble of the proposed rule (now sections XXI.B.4. and 5. of this final rule), we discussed our proposals that a hospital seeking an adjustment to its FTE resident cap under section 5503 or section 5506 of the Affordable Care Act must provide documentation justifying the adjustment. Sections XVII.D. and E. of the preamble of the proposed rule specified the information that a request would have to include. These requirements are exempt from the PRA in accordance with the provisions of the Affordable Care Act.

We did not receive any public comments on these information collection requirements.

G. Regulatory Impact Analysis

We have examined the impacts of this final rule as required by Executive Order 12866 (September 1993, Regulatory Planning and Review), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4), Executive Order 13132 on Federalism, and the Congressional Review Act (5 U.S.C. 804(2)).

Executive Order 12866 directs agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). A regulatory impact analysis (RIA) must be prepared for major rules that have economically significant effects ($100 million or more in any 1 year) or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal government or communities (58 FR 51741).

We have determined that this final rule is not a major rule as defined in 5 U.S.C. 804(2).

The RFA requires agencies to analyze options for regulatory relief of small businesses if a rule has a significant impact on a substantial number of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small

governmental jurisdictions. Many hospitals are considered to be small entities, either by being nonprofit organizations or by meeting the Small Business Administration (SBA) definition of a small business (hospitals having revenues of $34.5 million or less in any 1 year). (For details on the latest standards for health care providers, we refer readers to the SBA's Web site at: *http://sba.gov/idc/groups/public/documents/sba_homepage/serv_sstd_table.pdf* (refer to the 620000 series).) For purposes of the RFA, we have determined that many hospitals will be considered small entities according to the SBA size standards. Individuals and States are not included in the definition of a small entity. Therefore, the Secretary has determined that this final rule will have a significant impact on a substantial number of small entities. Because we acknowledge that many of the affected entities are small entities, the analyses presented throughout this final rule constitute our regulatory flexibility analysis. In the August 3, 2010 (75 FR 46459 through 46460), we solicited public comments on our estimates and analyses of the impact of the proposed rule on those small entities. We respond to any public comments that we received throughout this final rule.

As discussed in section XXI.D. of this final rule, section 5503 of the Affordable Care Act added a new section 1886(h)(8) to the Act that provides for reductions in the statutory FTE resident caps under Medicare for certain hospitals and authorizes a "redistribution" of the FTE resident slots resulting from the reduction in the FTE resident caps to other hospitals. At this time, we are unable to project how many FTE resident slots will be available for redistribution under section 5503 of the Affordable Care Act. Unlike section 422 of the Medicare Modernization Act, which also provided for a redistribution of FTE resident slots but provided that the redistributed slots will be paid using the national average per resident amount (PRA) for direct GME payment purposes, section 5503 of the Affordable Care Act requires that hospitals be paid for their additional FTE resident slots using the hospitals' specific PRAs. Because we are unable to determine the number of FTE resident slots that will be redistributed under section 5503 of the Affordable Care Act or which hospitals will be receiving additional FTE resident slots, we cannot calculate a direct GME impact for section 5503. We do not know the PRAs and Medicare utilization rates of hospitals that will be receiving additional FTE resident slots. For purposes of determining an impact for IME payment purposes, section 5503 requires us to use an IME multiplier of 1.35; however, we do not know the intern-to-bed ratio and resident-to-bed ratio for the hospitals that will receive additional FTE resident slots or the volume or case mix of Medicare discharges at those hospitals. Therefore, we cannot determine a financial impact for purposes of direct GME and IME for this provision.

In section XXI.B. of this final rule, we discuss our implementation of several changes made by section 5504 of the Affordable Care Act with regard to counting resident time in nonprovider settings for GME and IME payment purposes. Specifically, section 5504 of the Affordable Care Act eliminates the requirement for hospitals to incur "all or substantially all of the costs for the training program in the nonprovider setting," and now hospitals must only incur the costs of the salaries and fringe benefits of residents who train in nonprovider sites. Section 5504 also allows more than one hospital to incur the costs of training programs at nonprovider settings, either directly or through a third party. In addition, section 5504 of the Affordable Care Act creates a recordkeeping requirement for hospitals to track the time residents spend training in nonprovider settings, which CMS must compare to analogous data from a base year.

With respect to the recordkeeping requirement, we are adopting our proposal that rotation schedules be the source for establishing the amount of time that residents spend training in nonprovider sites, both in the base year and in subsequent years. In addition, we are adopting our proposal that cost reporting periods beginning on or after July 1, 2009 and before June 30, 2010 be the base year against which we will compare subsequent years' data to determine if the amount of nonprovider training that occurs in subsequent years increases relative to that base year. We also are adopting our proposal that hospitals only need to maintain records of the unweighted direct GME FTE count of resident training time in nonprovider settings. Finally, we are adopting our proposal to include several additional lines on the Medicare cost report for hospitals to submit these data. Hospitals will be required to report these data on a program-specific basis for their primary care programs, and on an overall hospital basis for their nonprimary care programs. These data will help us to identify whether barriers to resident training in nonprovider sites continue to exist.

We do not believe that any of these policies will have a significant financial impact on the Medicare program. While these policies may allow hospitals to count additional FTEs training in nonprovider sites, we do not believe that this constitutes significant financial impact on the Medicare program, because those residents will have been training at the hospital if they were not training at the nonprovider site. We note that the FTE slot redistribution discussed above that is required by section 5503 of the Affordable Care Act may have an impact on the hospitals' ability to increase the number of residents training at nonprovider sites, unless it moves the training that is currently conducted at the hospital to a nonprovider site. Therefore, the financial impact of section 5504 will be minimal.

In section XXI.C. of this final rule, we discuss our policies to implement the provisions of section 5505 of the Affordable Care Act that make several changes to existing CMS policy with respect to counting resident training time for didactic, scholarly and other activities. Specifically, section 5505(a) of the Affordable Care Act allows a hospital to count the time that residents spend training in an approved program in a "nonprovider setting that is primarily engaged in furnishing patient care" for direct GME purposes. Section 5505(b) of the Affordable Care Act allows nonpatient care activities to count toward resident time for IME purposes as well, but only in certain hospital settings. These nonpatient care activities do not include research activities that are not associated with the treatment or diagnosis or a particular patient. Section 5505 of the Affordable Care Act also allows hospitals to count the time spent by residents on vacation, sick leave, or other approved leave in the hospitals' direct GME and IME resident counts, as long as the leave time does not prolong the total time that the resident is participating in the approved training program. In our discussion of the provisions of section 5505, we described the definitions of the various new terms used in this section of the Affordable Care Act.

We do not believe that any of the policies which implement section 5505 of the Affordable Care Act will have a significant financial impact on the Medicare program. While all of these provisions allow teaching hospitals to claim more resident training time on their respective cost reports, a hospital is limited as to how many resident FTEs it can count. In addition, we note that the FTE slot redistribution that is

required by section 5503 of the Affordable Care Act discussed earlier may impact hospitals' ability to increase the number of residents training at nonprovider sites, unless a hospital moves the training that is currently conducted at the hospital to a nonprovider site. Therefore, the financial impact of section 5505 of the Affordable Care Act is minimal.

In section XXI.E. of this final rule, we discuss our policies to implement section 5506 of the Affordable Care Act. Prior to the passage of the Affordable Care Act, if a teaching hospital closed, its direct GME and IME FTE resident cap slots would be "lost," because those slots were associated with a specific hospital's Medicare provider agreement. Section 5506 of the Affordable Care Act addresses this situation by instructing the Secretary to establish a process by regulation that will redistribute FTE resident cap slots from teaching hospitals that close to hospitals that meet certain criteria.

Section 5506 of the Affordable Care Act applies to teaching hospitals that closed "on or after a date that is 2 years before the date of enactment," that is, March 23, 2008. Accordingly, although section 5506 of the Affordable Care Act does address certain teaching hospital closures that have already occurred, the focus of this provision is primarily on future teaching hospital closures, and ensuring that FTE resident cap slots are not lost to a community. We are unable to project which teaching hospitals will close, how many FTE resident slots they have, and to which hospitals those slots will be ultimately redistributed. Therefore, we cannot determine a financial impact for this provision.

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 603 of the RFA. With the exception of hospitals located in certain New England counties, for purposes of section 1102(b) of the Act, we now define a small rural hospital as a hospital that is located outside an urban area and has fewer than 100 beds. Section 601(g) of the Social Security Amendments of 1983 (Pub. L. 98–21) designated hospitals in certain New England counties as belonging to the adjacent urban areas. Thus, we continue to classify these hospitals as urban hospitals. We believe that the changes in this final rule will affect both a substantial number of rural hospitals as well as other classes of hospitals and that the effects on some may be significant. Therefore, the Secretary has determined that this final rule will have a significant impact on the operations of a substantial number of small rural hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. That threshold level is currently approximately $135 million. This final rule will not mandate any requirements for State, local, or tribal governments, nor will it affect private sector costs.

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct costs on State and local governments, preempts State law, or otherwise has Federalism implications. Because this regulation does not impose any costs on State or local governments, the requirements of Executive Order 13132 are not applicable.

In accordance with the provisions of Executive Order 12866, this final rule was reviewed by the Executive Office of Management and Budget.

XXII. Final Rule: Changes to Whole Hospital and Rural Provider Exceptions to the Physician Self-Referral Prohibition and Related Changes to Provider Agreement Regulations

A. Background

Section 1877 of the Act, also known as the physician self-referral law: (1) Prohibits a physician from making referrals for certain "designated health services" (DHS) payable by Medicare to an entity with which he or she (or an immediate family member) has a financial relationship (ownership or compensation), unless an exception applies; and (2) prohibits the entity from filing claims with Medicare (or billing another individual, entity, or third party payer) for those DHS furnished as a result of a prohibited referral. The Act establishes a number of specific exceptions and grants the Secretary the authority to create regulatory exceptions that pose no risk of program or patient abuse.

Section 1877(d) of the Act sets forth additional exceptions related to ownership or investment interests held by a physician (or an immediate family member of a physician) in an entity that furnishes DHS. Section 1877(d)(1) of the Act provides that an ownership or investment interest in a hospital located in Puerto Rico shall not be considered to be an ownership or investment interest. Section 1877(d)(2) of the Act provides an exception for ownership or investment interests in rural providers. In order for an entity to qualify for the exception, the DHS must be furnished in a rural area (as defined in section 1886(d)(2) of the Act) and substantially all of the DHS furnished by the entity must be furnished to individuals residing in a rural area. Section 1877(d)(3) of the Act provides an exception, known as the "whole hospital" exception, for ownership or investment interests in a hospital located outside of Puerto Rico, provided that the referring physician is authorized to perform services at the hospital and the ownership or investment interest is in the hospital itself (and not merely in a subdivision of the hospital).

B. Changes Made by the Affordable Care Act Relating to the Whole Hospital and Rural Provider Exceptions to Ownership and Investment Prohibition

Section 6001(a) of the Affordable Care Act amended the whole hospital and rural provider exceptions to impose additional restrictions on physician ownership or investment in hospitals to qualify for such exceptions. The statute defines a "physician owner or investor" in a hospital as a physician or an immediate family member of a physician who has a direct or indirect ownership or investment interest in the hospital. In this document, we refer to hospitals with such "physician owners or investors" as "physician-owned hospitals."

Section 6001(a)(2) of the Affordable Care Act provides that in order to satisfy the whole hospital exception, a physician-owned hospital must meet the requirements described in a new section 1877(i)(1) of the Act no later than September 23, 2011. Section 6001(a)(1) of the Affordable Care Act amended the rural provider exception to require that hospitals located in rural areas also satisfy the requirements of new section 1877(i)(1) of the Act no later than September 23, 2011.

Section 6001(a)(3) of the Affordable Care Act, as amended by the HCERA, sets forth the terms of new section 1877(i)(1) of the Act. Under section 1877(i)(1) of the Act, a hospital must:

(1) Have physician owners or investors and a provider agreement in effect on December 31, 2010;

(2) Not expand facility capacity beyond the number of operating rooms, procedure rooms, and beds for which the hospital was licensed as of March 23, 2010, unless an exception is granted by the Secretary;

(3) Comply with certain reporting and disclosure requirements and not condition any physician ownership or investment interests directly or indirectly on a physician making or influencing referrals to or generating other business for the hospital;

(4) Comply with certain requirements designed to ensure that all ownership and investment interests in the hospital are *bona fide*;

(5) Inform patients before admission if the hospital does not have a physician available on the premises during all hours and receive a signed acknowledgment that the patient understands this fact; and

(6) Not have been converted from an ASC on or after March 23, 2010.

In addition, section 1877(i)(2) of the Act requires the Secretary to collect, publish, and update on an annual basis on the CMS Web site (*http://www.cms.hhs.gov*) the physician and other ownership information submitted by hospitals under section 1877(i)(1)(C)(i) of the Act. Section 1877(i)(3) of the Act requires the Secretary to create an exception process related to the prohibition on expansion of facility capacity and publish in the **Federal Register** the final decision with respect to each applicant hospital.

Section 6001(b)(1) of the Affordable Care Act requires the Secretary to establish policies and procedures to ensure compliance with the requirements described in section 1877(i)(1) of the Act, which may include unannounced site reviews of hospitals. Section 6001(b)(2) of the Affordable Care Act requires the Secretary, beginning no later than May 1, 2012, to conduct audits to determine whether hospitals are in compliance with the requirements of new section 1877(i)(1) of the Act.

As noted above, physician-owned hospitals must meet the requirements of new section 1877(i)(1) of the Act not later than 18 months after the date of enactment (that is, by September 23, 2011). We have received numerous inquiries concerning how this language relates to several of the requirements set forth in section 1877(i)(1) of the Act that specify earlier deadlines. We believe that compliance with all requirements must occur no later than September 23, 2011, and failure to satisfy earlier deadlines will preclude use of the revised exceptions after the earlier deadline has passed. For example, section 1877(i)(1)(A) of the Act provides that the hospital must have had physician ownership or investment on December 31, 2010, and a provider agreement in effect on that date. Failure to obtain a provider agreement that is effective on or before December 31, 2010, will preclude use of the revised rural provider and whole hospital exceptions on and after January 1, 2011. Another example can be seen in section 1877(i)(1)(D)(i) of the Act, which provides that the percentage of the total value of physician ownership or investment interests held in the hospital, in the aggregate, must not exceed such percentage as of March 23, 2010. Therefore, if a hospital has no physician ownership or investment as of March 23, 2010, and later adds physician owners or investors, the hospital will not satisfy the whole hospital or rural provider exceptions. Most of the provisions within section 1877(i)(1) of the Act do not specify an explicit deadline for compliance. Thus, in the August 3, 2010 proposed rule (75 FR 46432), we proposed that the deadline for compliance with all provisions within section 1877(i)(1) of the Act that do not contain an explicit deadline is September 23, 2011, that is, 18 months after the date of enactment.

Below, we discuss changes we proposed to make to our regulations in response to section 6001 of the Affordable Care Act, as amended, the public comments we received, if any, our responses to those comments, and our final policies.

C. Changes to Physician Self-Referral Regulations

In order to conform our regulations to the amendments made to the rural provider exception by section 6001(a)(1) of the Affordable Care Act, in the August 3, 2010 proposed rule (75 FR 46432), we proposed to revise § 411.356(c)(1) to specify that, in the case where the rural provider is a hospital, the hospital must meet the requirements of proposed new § 411.362 no later than September 23, 2011.

Similarly, we proposed to revise the whole hospital exception at § 411.356(c)(3) to add a new paragraph (iv) that provides that the hospital must meet the requirements in new § 411.362 not later than September 23, 2011. In the new § 411.362, we set forth the additional requirements for both exceptions as mandated by section 1877(i)(1) of the Act.

1. Physician Ownership and Provider Agreement

Section 1877(i)(1)(A) of the Act requires that, in order to use the rural provider or whole hospital exception under section 1877(d)(3) of the Act, the hospital must have physician ownership or investment on December 31, 2010, and a provider agreement under section 1866 of the Act in effect on this date. In the August 3, 2010 proposed rule (75 FR 46432), we proposed to incorporate these requirements in § 411.362(b)(1) of the regulations.

Section 1877(i)(5) of the Act defines a "physician owner or investor" as a physician (or an immediate family member of such physician) with a direct or an indirect ownership or investment interest in the hospital. We proposed to incorporate this statutory definition in § 411.362(b)(1) of the regulations.

We received many public comments concerning this proposal and have considered each comment as discussed below.

Comment: Many commenters agreed with the proposed interpretation that, given the language in section 1877(i)(1)(D)(i) of the Act prohibiting the level of physician ownership from increasing after March 23, 2010, both existing hospitals and prospective hospitals, must have physician ownership or investment on March 23, 2010 regardless of the provision in section 1877(i)(1)(A) of the Act, which states that a hospital must have physician ownership on or before December 31, 2010 and a provider agreement in effect on such date. The commenters asserted that this provides a bright line rule and assures that existing hospitals and hospitals currently under development are treated equally with respect to physician ownership and investment.

Response: We appreciate the commenters' support for our proposals.

Comment: Two commenters disagreed with our interpretation that both existing hospitals and prospective hospitals must have physician ownership or investment on March 23, 2010 regardless of the provision in section 1877(i)(1)(A) of the Act stating that a hospital must have physician ownership on December 31, 2010. One commenter believed that our interpretation of the statute is flawed because it is contrary to congressional intent and the principle of statutory construction providing that, wherever possible, a statute should be construed to give effect to every word and to avoid rendering language meaningless. The commenter reasoned that, in the case of a hospital under development, there is merely a construction project, rather than a licensed hospital, in existence as of March 23, 2010. The commenter indicated that our proposed interpretation requiring physician ownership to exist on March 23, 2010, would render meaningless the statutory language specifying that a hospital must have physician ownership on December 31, 2010. Both commenters asserted that the March 23, 2010 date was a drafting

error that should be corrected through rulemaking. The commenters urged CMS to reconcile these provisions by applying the March 23, 2010 deadline for measuring the baseline percentage of physician ownership only to hospitals that already had a Medicare provider agreement in effect on March 23, 2010 and allowing hospitals that are under development and without any existing physician ownership or investment interests as of March 23, 2010 to add physician owners until the end of the year.

Response: We disagree with the commenters' proposal and reasoning. First, section 1877(i)(1)(D)(i) of the Act specifically states that the percentage of the total value of physician ownership or investment interests held in the hospital, or in an entity whose assets include the hospital, must not exceed such percentage as of date of enactment (March 23, 2010). Nothing in the plain language of the statute suggests that this provision applies only to hospitals that already have a provider agreement in effect on March 23, 2010. The reference to entities whose assets include the hospital suggest that Congress intended this provision to apply to hospitals that are under development. Therefore, if a hospital does not have physician ownership on March 23, 2010, and later adds physician owners, the hospital will be unable to qualify for the rural provider or whole hospital exception. Adopting the commenter's suggested interpretation would render section 1877(i)(1)(D)(i) of the Act entirely meaningless and require us to substitute its reference to the date of enactment (March 23, 2010) with "December 31, 2010." This is contrary to the principle that a statute must not be construed to add words that Congress has not included.

Second, the interpretation in the proposed rule does not render any provision of the Act meaningless. Our interpretation gives meaning to both sections 1877(i)(1)(A) and 1877(i)(1)(D)(i) of the Act. Reading both of these statutory provisions together, a hospital must have at least some physician ownership on March 23, 2010 and, even if it subsequently decreases physician ownership, it must at least retain some physician ownership on December 31, 2010. The hospital may not, for example, reduce physician ownership to zero on December 31, 2010, and later increase physician ownership to the level that existed on March 23, 2010. Additionally, we are clarifying that a physician-owned hospital may add or increase the number of physician owners or investors, or replace physician owners or investors, as long as the aggregate percentage of physician ownership or investment does not increase.

Comment: One commenter requested clarification regarding whether a physician-owned hospital would satisfy the exception if its provider agreement is issued after December 31, 2010, but with an effective date on or before December 31, 2010. The commenter suggested that the proposed regulatory language of § 411.362(b)(1) should be revised to read " * * * a provider agreement under section 1866 of the Act in effect on that date." Additionally, the commenter suggested that proposed § 411.362(b)(2) be revised to include similar language clarifying an effective date of December 31, 2010.

Response: A physician-owned hospital would satisfy the whole hospital or rural provider exception if its provider agreement is issued after December 31, 2010, so long as the provider agreement letter contains an effective date of on or before December 31, 2010.

Comment: One commenter stated that it takes a tremendous amount of money, time, staff and other resources to develop a hospital, obtain financing, and complete other steps necessary to have a provider agreement in effect on December 31, 2010 deadline to be grandfathered. The commenter further stated that it entered into a formal physician contribution agreement on March 1, 2010, and closed the contribution on April 30, 2010, relying on the language of section 6001 of the Affordable Care Act, believing it had until December 31, 2010 to obtain a Medicare provider agreement and physician ownership. The commenter contended that under CMS' interpretation of section 6001 of the Affordable Care Act and the March 23, 2010 enactment date, this hospital will not qualify for the whole hospital exception if it adds any physician owners after that date. The commenter further asserted that this interpretation is inconsistent with statutory construction and has harsh consequences. The commenter stated that if it had known March 23, 2010 was the deadline, it would have conformed to that date.

Response: The existence of the proposed legislation was well known and publicized. The terms of the legislation as enacted on March 23, 2010, clearly provided that the percentage of the total value of physician ownership or investment interests held in the hospital, in the aggregate, must not increase above the level that existed on the date of enactment. The commenter's choice to proceed with the contribution and not close it sooner was extremely risky under the circumstances if it intended for the physician owners to be able to refer to the new hospital. As noted above, we disagree that our interpretation of the statute is impermissible.

Comment: One commenter contended that interpreting section 6001 of the Affordable Care Act to require physician ownership in the hospital by March 23, 2010, renders meaningless the requirement that a physician-owned hospital must not have been converted from an ambulatory surgical center (ASC) to a hospital on or after the date of enactment.

Response: We disagree. Section 1877(i)(1)(D)(i) provides that the total value of the ownership or investment interests held by physicians in the aggregate in the hospital "or in an entity whose assets include the hospital" cannot exceed the percentage that existed on March 23, 2010. We believe that, depending on the facts, an ASC that later converts to a hospital could be an "entity whose assets include the hospital." In our experience, the hospital that exists after conversion from an ASC possesses the same equipment and other assets that once belonged to the ASC. For example, if an ASC converted to a physician-owned hospital on April 1, 2010, and the hospital later has a provider agreement in effect on December 31, 2010, it might not qualify for the whole hospital or rural provider exception. The parties could seek an advisory opinion to address this issue.

Comment: Another commenter raised a similar objection, asserting that there was an inconsistency between CMS' proposed interpretation that the hospital must have physician ownership by March 23, 2010, but that the facility expansion deadline is December 31, 2010, not March 23, 2010. The commenter believed these distinctions are arbitrary and that CMS is fabricating Congressional intent by stating in the proposed rule (75 FR 46434) that section 1877(i)(1)(D)(i) of the Act "assumes the existence of physician ownership" on March 23, 2010.

Response: We recognize that some commenters disagree with our interpretations of the statutory requirements. However, we believe that, in each instance, we have interpreted the various sections harmoniously. Also, we must clarify that we did not propose a uniform December 31, 2010 facility expansion deadline. Rather, consistent with the statute, we proposed in § 411.362(b)(2) that the hospital may not increase the number of operating

rooms, procedure rooms, and beds beyond that for which the hospital is licensed on March 23, 2010 (or, in the case of a hospital that did not have a provider agreement, in effect as of that date, but does have a provider agreement in effect on December 31, 2010, the effective date of such provider agreement).

Comment: One commenter asserted that many hospitals have projects that have been in the works prior to March 23, 2010, and December 31, 2010 is not enough time to obtain all approvals, licenses, and inspections in order to qualify for the grandfather provision. The commenter stated that, because the provider agreement deadline is this year, some hospitals will be disadvantaged merely because complying with regulations in some States takes longer than others.

Response: Section 1877(i)(1)(A) of the Act requires that, in order to use the whole hospital or rural provider exception, the hospital must have a provider agreement in effect on December 31, 2010. This is a statutory directive and we do not have the discretion to address the concern raised by the commenter.

Comment: One commenter recommended that CMS adopt, for the purposes of section 1877(i)(1)(A)(ii) of the Act only, the concept of an "approvable" application, similar to what is done for physicians. The commenter further suggested that assuming the applicant is ultimately successful in its certification survey, the point at which the application is submitted and reviewed by the fiscal intermediary or MAC and recommended to CMS for approval would be an appropriate point to establish compliance with the provider agreement deadline. An alternative suggestion made by the commenter was to require any fiscal intermediary or MAC that receives a provider application from a hospital trying to comply with section 1877(i)(1)(A)(ii) of the Act to review and respond to the applicant within 15 days.

Response: We are not persuaded by the commenter's recommendations. We will consider a provider to have a provider agreement in effect on December 31, 2010, if the effective date of the agreement is no later than December 31, 2010. As set forth in § 489.13(b), the effective date of a provider agreement may not be earlier than the latest of the dates on which CMS determines that the applicable Federal requirements are satisfied.

After consideration of the public comments we received, we are adopting as final, without modification, our proposed regulations at § 411.362(b)(1) and § 411.362(a)(1).

2. Limitation on Expansion of Facility Capacity

Section 1877(i)(1)(B) of the Act requires that the number of operating rooms, procedure rooms, and beds for which the hospital is licensed at any time on or after March 23, 2010, be no greater than the number of operating rooms, procedure rooms, and beds for which the hospital was licensed on that date. However, section 1877(i)(3)(C) of the Act authorizes the Secretary to permit a physician-owned hospital to increase capacity above its "baseline number of operating rooms, procedure rooms, and beds." Section 1877(i)(3)(C)(iii) of the Act, as amended by section 1106(2)(B) of the HCERA, defines the term "baseline number of operating rooms, procedure rooms, and beds" to mean "the number of operating rooms, procedure rooms, and beds for which the applicable hospital is licensed as of [March 23, 2010] (or, in the case of a hospital that did not have a provider agreement in effect as of that date, but does have an agreement in effect on December 31, 2010, the effective date of such provider agreement)." Although section 1877(i)(1)(B) of the Act does not reflect the language in section 1877(i)(3)(C)(iii) permitting the baseline facility capacity to be determined for some hospitals as of December 31, 2010, we must read sections 1877(i)(1)(B) and 1877(i)(3)(C)(iii) of the Act together and interpret them harmoniously. Accordingly, in proposed § 411.362(b)(2) in the August 3, 2010 proposed rule (75 FR 46463), we specified that the hospital will be limited to the number of operating rooms, procedure rooms, and beds for which the hospital is licensed on March 23, 2010, or if the hospital did not have a provider agreement in effect as of that date, but does have an agreement in effect on December 31, 2010, the effective date of such provider agreement.

The limitation on expansion of facility capacity applies to operating rooms, procedure rooms, and beds for which the hospital is licensed. It is important to note that the limitation on expansion applies to operating rooms and procedure rooms, regardless of whether a State licenses these rooms. Referrals are prohibited if made by physician owners and investors after facility expansion and prior to the Secretary's granting of an exception to the capacity restriction. Exceptions for expanding facility capacity will protect only those referrals made after the exception is granted.

Section 1877(i)(3)(G) of the Act specifies that "the term 'procedure rooms' includes rooms in which catheterizations, angiographies, angiograms, and endoscopies are performed, except such term shall not include emergency rooms or departments (exclusive of rooms in which catheterizations, angiographies, angiograms, and endoscopies are performed)." Under our proposed definition of procedure rooms at § 411.362(a)(2), the term is limited to the types of rooms specified in the statute. Although the statute would permit us to define "procedure rooms" to include rooms where other services are performed, we did not propose to do so. We encouraged public comments on whether "procedure rooms" should include rooms where additional services, such as CT or PET scans, or other services, are performed.

Section 1877(i)(3)(A) of the Act gives the Secretary until January 1, 2012, to promulgate regulations concerning the process for a hospital to apply for an exception and provides that the implementation of this process must occur on February 1, 2012. As we indicated in the proposed rule, we plan to issue a separate rulemaking document that will provide for implementation of this exceptions process.

We received a large number of comments on our proposal and have considered each comment as discussed below. Commenters in favor of our proposal agreed that the limitations on expansion on procedure rooms, operating rooms, and beds were necessary and consistent with section 1877(i)(1)(B) of the Act. Commenters who opposed the proposal raised questions concerning the financial impact upon hospitals that were in the midst of an expansion, our interpretation of the expansion deadline, and the interplay with the deadlines associated with other provisions found in section 1877(i) of the Act. A large number of commenters requested clarifications regarding situations where the State does not license these rooms and beds. We discuss below all of the significant points raised by commenters to our proposal.

Comment: One commenter urged CMS to confirm that a physician-owned hospital may replace operating rooms, procedure rooms, and beds with new ones, so long as the total number of each does not increase beyond the baseline number for which the hospital is licensed as of March 23, 2010. The

commenter noted that while Congress significantly increased the requirements to satisfy the whole hospital exception, such hospitals are permitted to exist under the law and, therefore, will need to be improved to maintain their infrastructure over time.

Response: The commenter correctly characterizes our interpretation of the Act. The language in section 1877(i)(1)(D) of the Act limits expansion of the total number of operating rooms, procedure rooms, and beds beyond the number for which the hospital is licensed as of March 23, 2010. Thus, if a hospital retires old beds for new beds (or retires old operating rooms and procedure rooms for new operating rooms and procedure rooms) without increasing the baseline number, there would be no violation of section 1877(i)(1)(B) of the Act.

Comment: One commenter stated that the proposed regulation did not address hospitals that had a provider agreement in effect on March 23, 2010, and were in the middle of an expansion project, including those projects or renovations that were occurring in States that do not license operating or procedure rooms.

Response: We recognize that States usually do not license the number of hospital operating and procedure rooms. As we stated in the August 3, 2010 proposed rule (75 FR 46433), the limitation on expansion applies to operating rooms and procedure rooms, regardless of whether a State licenses these rooms. We interpret the statutory phrase "for which the hospital is licensed" as applying only to beds. In other words, we believe the statute limits a hospital's ability to increase the number of beds for which it was licensed and the number of operating and procedure rooms that existed at the hospital and were operational on March 23, 2010 (or December 31, 2010, if applicable). A hospital that had a provider agreement in effect on March 23, 2010 and was in the process of expanding the number operating rooms or procedure rooms, but did not have the rooms in existence by March 23, 2010, would not be able to include in its baseline facility capacity the rooms that were not yet operational. The hospital could, however, seek the Secretary's approval of the expansion through the process that will be established under section 1877(i)(3)(A) of the Act.

Comment: One commenter stated that it could be difficult to satisfy the criteria for obtaining the Secretary's approval for an exception to the prohibition against expansion of facility capacity, particularly for general acute care full service hospitals, within an area of population growth.

Response: We understand the concerns expressed by the commenter, but we have no discretion to ignore the standards set forth in sections 1877(i)(3)(E) and (i)(3)(F) of the Act.

Comment: Several commenters objected to the proposed interpretation of section 1877(i)(1)(B) of the Act that the hospital will be limited to the number of operating rooms, procedure rooms, and beds for which the hospital is licensed on March 23, 2010, or in the case of a hospital that did not have a provider agreement in effect on that date, but does have an agreement in effect on December 31, 2010, the effective date of such agreement. Some commenters objected based on equity, while other commenters made arguments concerning this interpretation of section 1877(i)(1)(B) of the Act. Those commenters who objected to the interpretation suggested that the last clause in subsection (B) refers not the "date of enactment," which Congress could have easily done, but rather to "such date" as the date by which expansion must be completed. The commenters asserted that this language could refer to either the date of enactment or December 31, 2010, which appears in the preceding provision at section 1877(i)(1)(B) of the Act. The commenters further stated that this provision is ambiguous and capable of being interpreted several ways that do not necessitate limiting the number of beds, operating rooms, or procedure rooms to March 23, 2010 numbers. Additionally, some of the commenters asserted that this proposal renders the provision "18 months after the date of enactment" meaningless and superfluous. Those commenters stated that the statute should be read to give meaning to the 18-month deadline so that the hospital can add beds, operating rooms, or procedure rooms to its license before 18 months after the date of enactment.

Response: We are not persuaded to adopt either of the expansion deadlines recommended by the commenters. Although there may be varying interpretations of the statutory language, we believe that our reading is a rational reading of the statute. Section 1877(i)(1)(B) of the Act requires that the number of operating rooms, procedure rooms, and beds for which the hospital is licensed at any time on or after the date of enactment (March 23, 2010), be no greater than the number of operating rooms, procedure rooms, and beds for which the hospital was licensed "as of such date." We do not believe the commenter's suggestion that we construe "such date" to mean any date other than the date of enactment is reasonable. We note that section 1877(i)(3)(C) of the Act authorizes the Secretary to permit a physician-owned hospital to increase capacity above its "baseline number of operating rooms, procedure rooms, and beds." Section 1877(i)(3)(C)(iii) of the Act, as amended by section 1106(2)(B) of the HCERA, defines the term "baseline number of operating rooms, procedure rooms, and beds" to mean "the number of operating rooms, procedure rooms, and beds for which the hospital is licensed as of [March 23, 2010] (or, in the case of a hospital that did not have a provider agreement in effect as of that date, but does have an agreement in effect on December 31, 2010, the effective date of such provider agreement)." Although section 1877(i)(1)(B) of the Act does not reflect the language in section 1877(i)(3(C)(iii) of the Act permitting the baseline facility capacity to be determined for some hospitals as of December 31, 2010, we must read sections 1877(i)(1)(B) and 1877(i)(3)(C)(iii) of the Act together and interpret them harmoniously. Accordingly, in proposed § 411.362(b)(2), we specified that the hospital will be limited to the number of operating rooms, procedure rooms, and beds for which the hospital is licensed on March 23, 2010, or if the hospital did not have a provider agreement in effect as of that date, but does have an agreement in effect on December 31, 2010, the effective date of such provider agreement. Referrals are prohibited if made by physician owners and investors after facility expansion and prior to the Secretary's granting of an exception to the capacity restriction. Exceptions for expanding facility capacity will protect only those referrals made after the exception is granted.

The other recommendation made by commenters involved interpreting the statute to permit facility expansion until September 23, 2011. In the August 3, 2010 proposed rule (75 FR 46432), we stated that physician-owned hospital must meet the requirements of new section 1877(i)(1) of the Act not later than 18 months after the date of enactment (that is, by September 23, 2011). We believe that compliance with all requirements must occur no later than September 23, 2011, and failure to satisfy earlier deadlines (such as that forth in section 1877(i)(1)(B) of the Act) will preclude use of the revised exceptions after the earlier deadlines have passed. We do not believe that the commenters' suggestion gives effect to other deadlines in the statute.

Comment: One commenter asserted that the deadline for obtaining physician ownership and a provider agreement and the deadline for measuring the baseline facility capacity are in conflict. The commenter believed there was a drafting oversight and that the proposed rule defies logic. The commenter remarked that the "grandfathering" of providers and the limitations on expansion were clearly intended to run until the end of this year but because of a technical oversight, the grandfathered provider must have physician ownership as of March 23, 2010.

Response: We are obligated to follow the statutory directive, and we believe our interpretation of the statutory provision is reasonable. We believe there is no conflict between section 1877(i)(1)(A) of the Act, which mandates that, in order to use the rural provider and whole hospital exceptions, the hospital must have a provider agreement and physician ownership or investment on December 31, 2010, and the restriction on facility expansion set forth in section 1877(i)(1)(B) of the Act and interpreted in accordance with section 1877(i)(3)(C) of the Act. As we noted in the proposed rule, several of the requirements in section 1877(i)(1) of the Act have differing deadlines for compliance and we must give meaning to those deadlines.

Comment: One commenter argued that the proposed rule will have a significant and deleterious effect on psychiatric hospitals in particular because the number of beds available for psychiatric patients has been declining over the years and as a result, this shortage has increased demands on hospital emergency rooms. The commenter recommended the following changes to the proposed rule at § 411.362(b)(2):

1. Exempt grandfathered psychiatric hospitals from § 411.362(b)(2).

2. Revise the rule to specify that grandfathered psychiatric hospitals are permitted to expand bed capacity (only) beyond that for which it was licensed as of March 23, 2010.

Response: We are not persuaded to adopt the commenter's suggestions. We have the authority pursuant to section 1877(b)(4) of the Act to create new regulatory exceptions for financial relationships such as the one recommended by the commenter, provided that such an exception poses no risk of program or patient abuse. At this time, we are unable to conclude that there is no risk of program or patient abuse and, therefore, we will not be promulgating the exception requested by the commenter. We will continue to consider whether there are certain types or categories of hospitals that warrant an exception. In addition, we remind the commenter that, pursuant to section 1877(i)(3)(A) of the Act, there will be a process for hospitals to apply for an exception to the limitation on the expansion of rooms and beds. Individual psychiatric hospitals that are impacted by the limitation on expansion may wish to request an exception under this process.

Comment: One commenter stated the prohibition against facility expansion should not apply when a physician-owned hospital relocates some or all of the operating rooms, procedure rooms, or beds for which the hospital was licensed as of March 23, 2010, to an existing or new site if:

1. Relocation would not increase the number of operating rooms, procedure rooms, or beds for which the hospital was licensed on March 23, 2010;

2. Following this relocation, all of the hospital's operating rooms, procedure rooms, and beds (including those relocated to the other site) would continue to be operated by the same legal entity, under the same State-issued hospital license, the same Medicare provider agreement and the same CMS certification number;

3. The hospital's original location and other site would be operated in compliance with all applicable Medicare laws and requirements; and

4. The hospital would comply fully with all the requirements under the whole hospital exception.

The commenter urged CMS to clarify that a hospital is free to relocate its existing beds under the circumstances described above.

Response: Under the circumstances described by the commenter, the relocation of beds would not constitute an increase in the number of licensed beds. Under other circumstances, the hospital may wish to seek an advisory opinion regarding the applicability of the prohibition against expansion.

Comment: One commenter contended that section 1877(i)(1)(B) of the Act does not provide any basis for including restrictions on how a hospital uses its beds, as long as it does not increase the number of beds beyond the number that were licensed on March 23, 2010. Another commenter similarly inquired whether operating rooms, procedure rooms, and beds could change purposes (for example, through the conversion of a cardiac catheterization room into an endoscopy room), as long as the number of operating rooms, procedure rooms, and beds in the aggregate did not increase. However, another commenter asserted that, under the terms of the statute, a hospital cannot reduce its operating rooms to increase the number of its procedure rooms, and each individual category must remain capped at its March 23, 2010 level.

Response: We interpret section 1877(i)(1)(B) of the Act to impose restrictions only on the aggregate number of operating rooms, procedure rooms, and beds. Therefore, we will not impose any restrictions regarding the manner in which a physician-owned hospital uses its beds, operating rooms, or procedure rooms. In other words, if a hospital is authorized to operate 20 beds, 2 operating rooms, and 2 procedure rooms, the hospital may reduce or increase the number of beds, operating rooms, or procedure rooms as long as the resulting aggregate number of beds, operating rooms, and procedure rooms does not exceed 24 (assuming any applicable licensure requirements are satisfied).

Comment: Several commenters supported the statement in the preamble of the proposed rule (75 FR 46433) that the limitation on the expansion of procedure rooms and operating rooms applies regardless of whether a State licenses those rooms.

Response: We appreciate the commenters' support for our position.

Comment: One commenter recommended that CMS clarify that even if the hospital's State-issued license does not separately enumerate the number of operating rooms or procedure rooms, the State can confirm the number of operating rooms and procedure rooms that the hospital was authorized to operate as of March 23, 2010, and if no increase has occurred since that time, the hospital would be viewed as being compliant with this provision.

Response: The commenter's suggestion is an acceptable method of demonstrating compliance with section 1877(i)(1)(B) of the Act.

Comment: One commenter requested that the proposed regulation be revised to clarify how the number of operating rooms and procedures rooms at physician-owned hospitals will be determined in States that do not license such rooms. The commenter recommended that CMS adopt certain conditions which, if met, would deem an operating room or procedure room to be "licensed." The commenter stated that if a hospital was conducting a construction or renovation project as of March 23, 2010, in a State that does not license operating rooms or procedure rooms, that room should be deemed licensed as of March 23, 2010.

Response: We are not persuaded to adopt the commenter's suggestion to

revise our proposal such that a renovation or construction project that was underway as of March 23, 2010, would be deemed licensed. As stated above, we do not interpret the statutory reference to licensure as applying to operating and procedure rooms. We believe the baseline capacity includes those operating and procedure rooms that were in existence and operational on March 23, 2010 (or December 31, 2010, if applicable). The advisory opinion process could be used to determine whether rooms undergoing renovation or construction were in existence by the applicable date.

Comment: One commenter urged CMS to clarify whether a prohibited expansion would occur if a hospital has rooms "approved" by the State in "shelled space," which is space included in plans for a future specified use, if the space has been physically built (walls, floors, doors) on or before the baseline date determined under subparagraph (3)(C)(iii) of section 1877(i) of the Act but fitted out after the baseline date.

Response: We are unclear as to the situation that the commenter is describing. The commenter's situation may be addressed through the advisory opinion process or the process for obtaining an exception to the prohibition on facility expansion.

Comment: The majority of commenters agreed with the proposed definition of "procedure rooms." Many commenters stated that the statute makes specific references to these services, underscoring Congress' intent to ensure that this definition specifically mirrors that statutory language. Another commenter stated that to expand the listing of specific procedure rooms would not take into account continued trends in technological advancements of equipment that require hospitals to change the traditional and treatment option to modalities that are less invasive. This same commenter asserted that restricting hospitals' ability to add these services for their patients would fragment treatment plans for the patients, thus requiring transfers to other facilities, which may result in additional costs to the patients and providers.

Response: We agree with many of the points offered by the commenters. Therefore, we are not adding any additional services to the proposed definition of procedure rooms beyond those set forth in section 1877(i)(3)(G) of the Act.

Comment: One commenter recommended that the regulatory definition of "procedure rooms" be broadened in a number of respects:

1. The definition should include rooms where the following additional services are provided: Radiation therapy and all diagnostic imaging services, including MRI, CT, and PET scans, interventional radiology, and mammography.

2. The definition should include freestanding emergency departments, prohibiting physician-owned hospitals from adding these facilities after the date of enactment of the Affordable Care Act.

3. The definition should include areas not technically defined as separate procedure rooms, in which medical services similar to those provided in procedure rooms can be provided, and the commenter believes that the proposed rules should account for changes in technology which may allow the list of procedures to be furnished in a patient room.

Response: We are not persuaded that a broadening of the definition of procedure rooms is warranted at this time. However, we will continue to monitor expansions in procedure rooms to determine whether we should revisit this issue in future rulemaking, such as the separate rulemaking that will provide for implementation of the exceptions process.

Comment: Several commenters noted that the proposed rule did not address the process for requesting exceptions to the growth restriction on existing physician-owned hospitals. The commenters stated that more guidance is necessary for hospitals to align their actions with section 6001 of the Affordable Care Act.

Response: We understand the commenters' request for more guidance, particularly with regards to the exception process. However, section 1877(i)(3)(A) of the Act gives the Secretary until January 1, 2012 to promulgate regulations concerning the exceptions process. We believe it is important that we balance the commenters' sense of urgency with the need to develop and implement an exceptions process that adheres to the statute, addresses all issues necessary for a provider to request such an exception, and ensure that we receive all information needed in order to timely render an informed decision.

After consideration of the public comments we received, we are finalizing our proposed § 411.362(b)(2) without modification.

3. Preventing Conflicts of Interest

Section 1877(i)(1)(C)(i) of the Act requires the hospital to submit to the Secretary an annual report containing a detailed description of the identity of each physician owner or investor and any other owners or investors of the hospital, and the nature and extent of all ownership and investment interests in the hospital. We plan to propose procedures for this reporting requirement in a separate rulemaking or guidance document.

Sections 1877(i)(1)(C)(ii) through (i)(1)(C)(iv) of the Act requires hospitals to: (1) Develop procedures requiring a referring physician owner or investor to disclose (in time to permit the patient to make a meaningful decision about receipt of care) his or her ownership interest to the patient and, if applicable, the treating physician's ownership or investment interest; (2) not condition any physician ownership or investment interests either directly or indirectly on the physician making or influencing referrals to the hospital or otherwise generating business for the hospital; and (3) disclose on any public Web site for the hospital and in any public advertising that it is owned or invested in by physicians. Compliance with these three requirements must be achieved no later than September 23, 2011.

To incorporate these requirements into our regulations, in the August 3, 2010 proposed rule (75 FR 46463), we proposed to: (1) Add § 411.362(b)(3)(ii)(A) to specify that a hospital must require each referring physician owner or investor to agree, as a condition of continued medical staff membership or admitting privileges, to provide written disclosure of his or her ownership or investment interest in the hospital (and, if applicable, the treating physician's ownership or investment interest in the hospital) to all patients the physician refers to the hospital, at the time the referral is made; (2) add § 411.362(b)(3)(ii)(B) to specify that a hospital may not condition any physician ownership or investment interests either directly or indirectly on the physician owner or investor making or influencing referrals to the hospital or otherwise generating business for the hospital; and (3) add § 411.362(b)(3)(ii)(C) to specify that the hospital must disclose on any public Web site for the hospital and in any public advertising that the hospital is owned or invested in by physicians.

Proposed § 411.362(b)(3)(ii)(A) defines the procedures that a hospital must have in place to require its physician owners and investors to make certain patient disclosures. In the proposed rule, we stated that we do not believe the disclosures to be made by physicians will be burdensome. For example, a physician owner or investor could provide a written, form notice to each patient that discloses the

physician's ownership or investment interest in the hospital, informs the patient that his or her treating physician may have an ownership or investment interest in the hospital, and directs the patient to review an attached list identifying all other physician owners or investors in the hospital. This notice may be used by the patient to make a meaningful decision regarding his or her receipt of care.

In the August 3, 2010 proposed rule, we solicited public comments on several different issues relating to preventing conflicts of interest. First, we sought public comments on the benefits and drawbacks of our proposal, discussed above, relating to the procedures hospitals must have in place to require referring physician owners and investors to make the patient disclosures set forth in section 1877(i)(1)(C)(ii) of the Act. We stated that we were interested in receiving information about other methods and alternative approaches to address this issue and what should constitute sufficient hospital procedures to require such disclosures to a patient by a referring physician owner or investor.

Second, we indicated that we were aware that a patient may have multiple conditions for which there are a variety of physician specialists who are responsible for different aspects of a patient's care, even though the statute refers to a single "treating physician." We did not propose to define "treating physician." We stated that we would consider treating physicians to be those physicians who are responsible for any aspect of a patient's care or treatment. We welcomed public comments on this approach.

Finally, we encouraged public comments on the methods a hospital should be required to use in disclosing its physician ownership or investment in public advertising pursuant to section 1877(i)(1)(C)(iv) of the Act. For example, we indicated that we were interested in comments on whether a hospital should be required to disclose physician ownership or investment on its homepage, any particular page on its Web site (for example, an "About Us" page), or all pages on its Web site; the types of media that constitute, or do not constitute, public advertising; and whether a minimum font size should be required for the disclosure.

We received several comments on this proposal and have considered each comment as discussed below. Commenters in favor of our proposal agreed that the proposed procedures for assuring that patients are informed about hospital ownership interests of referring and treating physicians are adequate, reasonable, and not overly burdensome. The commenters who were opposed to the proposal raised various issues concerning the appropriateness and timeliness of ownership disclosure to patients by hospitals and physicians. Commenters also had suggestions concerning the methods hospitals should utilize in disclosing physician ownership on Web sites and in public advertising.

Comment: Several commenters noted that the proposed rule did not address the requirement under section 1877(i)(1)(C)(i) of the Act for hospitals to submit to the Secretary an annual report containing a detailed description of the identity of each physician and other owner or investor in the hospital and the nature and extent of all ownership and investment interests in the hospital. The commenters stated that more guidance is necessary for hospitals to ensure compliance with this provision by September 23, 2011.

Response: We understand the commenters' request for more guidance regarding the process for reporting information to CMS. As noted above, the process for collecting this information will be the subject of a separate rulemaking or guidance document. We are using this time to determine the exact type of information that must be reported, the mechanisms for hospitals to submit the required information, instructions to hospitals, and how we will post the required information on the CMS Web site. After the process has been determined, we will provide hospitals and physicians with the guidance requested by the commenters. In the meantime, we have added a provision at § 411.362(b)(3)(i) to clarify that the hospital shall submit the annual report at such time and in such manner as specified by CMS.

Comment: A few commenters had questions about the appropriateness and timeliness of ownership disclosures made by physicians to their patients. For instance, one commenter wanted to know: (1) If a separate disclosure is required for every admission; (2) when should a disclosure occur; (3) if a physician has previously disclosed ownership, whether another disclosure should occur before admission; (4) if a patient is treated in an outpatient clinic, but suddenly needs to be admitted as an inpatient, should disclosure be immediate or after treatment; and (5) if disclosures are required for confused, unconscious, or otherwise incoherent patients. Another commenter suggested that it will be problematic to require in all cases a referring physician to disclose to the patient his or her ownership interest in a timely fashion to permit the patient to make a meaningful decision about receipt of care.

Response: Section 1877(i)(1)(C)(ii) of the Act requires that a physician disclose his or her ownership interest in a hospital to a referred patient by a time that permits the patient to make a "meaningful decision regarding the receipt of care." We stated in the proposed rule that, in order for the patient to make a meaningful decision regarding the receipt of care, the disclosure must occur at the time of referral. We have reconsidered this policy in light of the commenters' concerns regarding the burden of making disclosures at the time of each referral and the potential for this policy to result in disproportional overpayment liability under section 1877(g)(1) of the Act. We are modifying the regulation text to mirror the statutory language, which we believe offers more flexibility regarding the timing and method of disclosure. We recognize that our existing regulations governing provider agreements at § 489.20(u)(2) require each physician who is a member of the hospital's medical staff to agree to make a similar disclosure at the time of referral. Because we did not propose to change this standard in § 489.20(u)(2), we are not doing so in this final rule.

Comment: One commenter believed that CMS should give further consideration as to how it can impose the disclosure requirements directly on the physician rather than the hospital. The commenter noted that the hospital, not the physician, is in a position to be sanctioned for a physician owner's failure to disclose. Another commenter recommended that the loss of a physician's medical staff membership or admitting privileges was too draconian a remedy for the physician's failure to disclose his or her hospital ownership interests. One commenter recommended that if a physician does not disclose his or her ownership in a hospital at the time of referral, the physician should not receive Medicare payment for his or her professional services provided at the hospital.

Response: Section 1877(i)(1)(C)(ii) of the Act requires hospitals to have procedures in place to require a referring physician owner to disclose to the patient his or her ownership or investment interest in the hospital as well as any ownership interest, if applicable, of the treating physician. Those procedures, in turn, must require physicians to agree to make such disclosures as a condition of continued medical staff membership or admitting privileges. A physician's failure to fully comply with such agreement is a

disciplinary matter for the hospital to resolve in accordance with the medical staff bylaws and would not necessarily result in a violation of the physician self-referral law. As noted above, a similar requirement already appears in our provider agreement regulations at § 489.20(u)(2). The last comment is beyond the scope of this rulemaking.

Comment: One commenter suggested that, in emergency situations, that is, non-elective admissions, it will be very difficult for physicians to provide the required disclosure in a timely fashion. Therefore, the commenter recommended that when a patient is first seen by a physician in a hospital emergency department, the physician should be exempted from the pre-admission disclosure requirement. Another commenter suggested that the physician ownership disclosure requirement can be satisfied by the hospital on behalf of the physician during the patient admission and registration process, as hospitals are already required, under § 489.20(u)(1) to disclose physician ownership at the beginning of the patient's hospital stay or outpatient visit.

Response: In the case of a patient who is treated by a physician owner in the hospital emergency department, we believe that no disclosure is necessary other than that required under § 489.20(u). The statute requires hospitals to ensure that physician owners make the relevant disclosures "by a time that permits the patient to make a meaningful decision regarding the receipt of care." By the time a patient has presented at the emergency department, the patient or the patient's representative has already made a decision about where to receive care. If a patient is admitted to the hospital, the patient or the patient's representative must be notified by the hospital under § 489.20(u) that the hospital is physician-owned.

Comment: One commenter believed that the regulations should be amended to allow physicians to prominently display in their offices a notice informing patients that the physician has an ownership interest in a particular hospital facility and that the patient can inquire further or request admission to another facility. Another commenter noted our suggestion that the referring physician could disclose the ownership or investment interest of any treating physician by directing the patient to review a list of other investors in the hospital. The commenter requested clarification as to whether physician owners would be required to provide such a list for each patient referral. The commenter suggested that if this requirement were imposed for each and every referral, the paperwork involved would be substantial and cumbersome. The commenter recommended that such a disclosure be required only when a patient requests a list of all other owners.

Response: We are not revising the regulations to require any particular means of notification by a physician of hospital ownership. Physicians can inform patients of their ownership interests and the ownership interests of treating physicians in any manner that permits the patient to make a meaningful decision regarding the receipt of care. A prominently displayed sign and list of other treating physicians with an ownership or investment interest in the hospital could satisfy the disclosure requirement, although we note that it may not be a meaningful disclosure in all cases. If a patient is blind, unable to read, or is incapacitated, it would be incumbent upon the physician to notify the patient or an immediate family member of the patient in a manner other than the one suggested.

Comment: One commenter noted that, in many cases, a patient of a referring physician with hospital ownership interests may have several treating physicians. The commenter recommended that the referring physician provide the patient with a list of all physician owners who are actively practicing at the hospital. Another commenter believed that a referring physician hospital owner, especially in an emergency room setting, will not have an early opportunity to inform the patient of the treating physician's ownership interests in the hospital. The commenter was concerned that the disclosure process could place the patient in danger by delaying patient care in order to provide timely ownership disclosure information.

Response: We suggested in the preamble to the proposed rule that a referring physician could use a written, form notice to disclose his or her ownership interest to the patient. Also, we suggested that the referring physician could disclose the ownership interest of one or more treating physicians by directing the patient to review a list of other investors in the hospital. As we stated above, no disclosure by a physician owner is necessary with respect to a patient whom the physician treated in a hospital emergency department.

Comment: Several commenters stated that the statutory provision at section 1877(i)(1)(C)(iv) of the Act requiring hospitals to disclose physician ownership information on the hospitals' Web sites could be accomplished by placing such information on the home page or "about us" section on the Web sites. The commenters also believed that the disclosures on the Web sites should be clearly visible to the typical reader.

Response: We agree with the recommendations made by the commenters. We believe a hospital could satisfy this requirement by including on one location within its public Web site a list of the physician owners who actively practice at the facility. A list of the physician owners should be located in a conspicuous place on the Web site, on a page that is commonly visited by current or potential patients, such as the home page or "about us" section. We also believe the physician ownership information should be readily legible and in a size that is consistent with other text on the Web site.

Comment: One commenter recommended that the hospital requirement to disclose hospital ownership information in any public advertising should be limited to specific activities and should not be required in all public advertising. The commenter suggested that the inclusion of physician ownership information in its public advertising should apply only to direct mail, Internet, and other print communications where such communication can be read and fully understood. The commenter believed that a hospital should not be required to include disclosures in other advertising, such as the kind found on billboards, or radio and television. Another commenter also recommended that hospital disclosures in public advertising should be confined to print media such as newspapers, magazines, and other internally produced print material for public use.

Response: We have no flexibility regarding the disclosure of hospital ownership information. Section 1877(i)(1)(C)(iv) of the Act requires that the hospital disclose the fact that the hospital is partially owned or invested in by physicians in "*any* public advertising" for the hospital. We believe that the disclosure can be satisfied by simply adding a sentence to this effect in public advertisements. We agree that a hospital also is required to disclose this information in a clear and readable manner in any of its print advertising made available to the public, such as direct mailings and other print communications, for example, newspapers and magazines.

In addition, we are finalizing our proposed § 411.362(b)(3) regarding "Preventing Conflicts of Interest" with one technical change. We are making a

technical correction to proposed § 411.362(b)(3)(ii)(C) by replacing "or" with "and" in order to conform to the precise language of section 1877(i)(1)(C)(iv) of the Act.

4. Ensuring Bona Fide Investment

Section 1877(i)(1)(D) of the Act sets forth seven different requirements related to ensuring *bona fide* investment in order for hospitals to qualify for the rural provider and whole hospital exceptions set forth in the physician self-referral law. First, the percentage of the total value of the ownership or investment interests held in the hospital, or in an entity whose assets include the hospital, by physician owners or investors, in the aggregate may not exceed such percentage as of March 23, 2010. Second, any ownership or investment interests that the hospital offers to a physician owner or investor must not be offered on more favorable terms than the terms offered to a person who is not a physician owner or investor. Third, the hospital (or any owner or investor in the hospital) must not directly or indirectly provide loans or financing for any investment in the hospital by a physician owner or investor. Fourth, the hospital (or any owner or investor in the hospital) must not directly or indirectly guarantee a loan, make a payment toward a loan, or otherwise subsidize a loan, for any individual physician owner or investor or group of physician owners or investors that is related to acquiring any ownership or investment interest in the hospital. Fifth, ownership or investment returns must be distributed to each owner or investor in the hospital in an amount that is directly proportional to the ownership or investment interest of such owner or investor in the hospital. Sixth, physician owners and investors must not receive, directly or indirectly, any guaranteed receipt of or right to purchase other business interests related to the hospital, including the purchase or lease of any property under the control of other owners or investors in the hospital or located near the premises of the hospital. Lastly, the hospital must not offer a physician owner or investor the opportunity to purchase or lease any property under the control of the hospital or any other owner or investor in the hospital on more favorable terms than the terms offered to an individual who is not a physician owner or investor. We note that additional or different factors may be relevant to a determination of whether an investment is *bona fide* for purposes of complying with other laws, including fraud and abuse laws.

In the August 3, 2010 proposed rule (75 FR 46434), we proposed to add § 411.362(b)(4) to incorporate these provisions in our regulations. We stated that we recognized that section 1877(i)(1)(A) of the Act provides that the hospital must have had physician ownership or investment on December 31, 2010, while section 1877(i)(1)(D)(i) of the Act assumes the existence of physician ownership or investment on March 23, 2010 and further provides that the percentage of the total value of physician ownership or investment interests held in the hospital, in the aggregate, on that date must not increase. Reading these provisions together, we conclude the following: (i) If a hospital had no physician ownership or investment as of March 23, 2010, it will not qualify for the whole hospital or rural provider exceptions if it adds any physician owners or investors after that date; and (ii) if a hospital had physician ownership or investment as of March 23, 2010, it may reduce the number of physician owners or investors, provided that the percentage of the total value of physician ownership or investment interests, in the aggregate, remains the same or decreases.

The second through seventh requirements tied to ensuring *bona fide* investment (sections 1877(i)(1)(D)(ii) through 1877(i)(1)(D)(vii) of the Act) do not specify any deadlines for compliance. Accordingly, compliance with the second through seventh requirements must be achieved no later than September 23, 2011.

In the proposed rule, we stated that if we determine that further guidance related to any aspect of section 1877(i)(1)(D) of the Act is necessary, we would provide clarification in future rulemaking. Furthermore, a hospital may request an advisory opinion (pursuant to §§ 411.370 through 411.389) for a determination of whether an existing or proposed arrangement meets the requirements for hospitals to ensure that investment is *bona fide*.

Comment: Some commenters stated that CMS should clarify whether section 1877(i)(1)(D) of the Act would be violated if the total value of ownership or investment interests held in the hospital by physicians in the aggregate (the "bona fide investment level") fluctuates. For example, one commenter inquired whether a hospital could repurchase the ownership interest held by a recently deceased physician (thereby reducing the bona fide investment level) and later resell that ownership interest to another physician, returning the bona fide investment limit to the same level it was on March 23, 2010.

Response: The bona fide investment level may fluctuate as long it never exceeds the level that existed on March 23, 2010.

Comment: Many commenters stated that CMS should clarify whether a hospital can reduce or increase the number of physician owners as long as the percentage of the total value of physician ownership remains unchanged. The commenters believed that nothing in the statute precludes the addition of new physician owners as long as the percentage of ownership remains constant.

Response: We agree that section 1877(i)(1)(D) of the Act does not restrict the number of physicians that may have an ownership interest in a hospital. The bona fide investment level requirement would not be violated as long as the percentage of the total value of the ownership or investment interest held in the hospital by physician owners in the aggregate does not exceed such percentage as of March 23, 2010.

Comment: One commenter sought confirmation that a hospital wishing to recruit a new physician would be able to give some ownership units from one physician to another new physician.

Response: Any arrangement in which a hospital or physician owner "gives" to another physician an ownership or investment interest in the hospital is highly suspect. We assume the commenter is inquiring whether section 1877(i)(1)(D)(i) of the Act would be violated if one or more physician owners transferred some of their shares in the hospital to the recruited physician for fair market value, possibly at the request of the hospital. This provision would not be violated as long as the bona fide investment level does not exceed that which existed as of March 23, 2010. In addition, the parties should carefully review the arrangement to ensure that it fully complies with the physician recruitment exception at § 411.357(e), the anti-kickback statute, and any other applicable laws.

Comment: Several commenters addressed the situation in which a hospital has physician owners, but no Medicare provider agreement, as of March 23, 2010. One commenter sought clarification that the level of physician ownership can increase prior to December 31, 2010. Several other commenters disagreed with this interpretation and requested that CMS explicitly state that the bona fide investment level is capped as of March 23, 2010 even if the hospital does not have a Medicare provider agreement as of that date.

Response: The bona fide investment level may not increase for any hospital with physician owners as of March 23, 2010, regardless of whether the hospital has a Medicare provider agreement as of that date. In addition, as we indicated in the proposed rule (75 FR 46432), if a hospital has no physician owners or investors on March 23, 2010, the hospital will not satisfy the whole hospital or rural provider exception if it later adds physician owners or investors.

Comment: One commenter inquired as to whether the *bona fide* investment level is based on the aggregate percentage of the *number* of shares held by physicians or the aggregate percentage of the *value* of shares held by physicians. The commenter suggested that the more workable option is for the limit to be based on a strict percentage of the number of outstanding shares. The commenter further contended that basing the limit on a hospital's value would require the hospital to ascertain its value on a regular basis to make certain that the aggregate value of the physicians' ownership never exceeds the March 23, 2010 limit.

Response: We are not adopting the commenter's suggestion. Section 1877(i)(1)(D) of the Act refers to "the total value of the ownership or investment interests held in the hospital * * * by physician owners or investors in the aggregate" as of March 23, 2010. The plain language of the statute refers to the value of the investment interests, not the number of shares held by physicians.

Comment: A few commenters presented differing scenarios that involved the sale of ownership shares in a hospital. The commenters stated that the statute does not appear to impose any restrictions on the ability to transfer ownership pursuant to a sale of the ownership/investment interests but, nevertheless, believed it would be important for CMS to clarify this issue. One commenter asserted that the statutory language does not prohibit private sales among physician owners/investors where the bona fide investment level in the hospital remains unchanged.

Response: We agree with the commenters. The statute does not restrict the transfer of physician ownership interests pursuant to a bona fide sale, as long as the percentage of the total value of the ownership or investment interests held in the hospital, or in an entity whose assets include the hospital, by physician owners or investors in the aggregate would not exceed the percentage as of March 23, 2010.

Comment: One commenter representing a hospital system requested clarification concerning whether hospitals may continue to condition a physician's ownership interest on his or her continued practice of medicine and require the physician to divest his or her investment interest in the hospital if the physician retires or ceases to practice medicine in the community served by the hospital.

Response: Section 1877(i)(1)(C)(iii) of the Act prohibits a hospital from conditioning any physician ownership or investment interest either directly or indirectly on the physician's ability to make or influence referrals to the hospital. Depending on the facts, the conditions described by the commenter could implicate this provision.

Comment: Some commenters believed that the bona fide investment level should be calculated without regard to any ownership or investment interests held by physicians who do not make any referrals to the hospital, including physicians who are no longer practicing medicine. The commenters asserted that the purchase of a referring physician's ownership interest by a non-practicing, non-referring physician should not be prohibited by the statute because it has no potential for program or patient abuse. They suggested various revisions to the regulation to avoid this result, including amendments to the definition of "referral," "referring physician," and the creation of a new exception using our authority under section 1877(b)(4) of the Act.

Response: The ownership or investment interests of nonreferring physicians need not be considered when calculating the baseline physician ownership level. Section 1877(i)(1)(D)(i) of the Act provides that the percentage of the total value of the ownership or investment interests held in the hospital by "physician owners or investors" in the aggregate may not exceed such percentage that existed on March 23, 2010. Section 1877(i)(5) broadly defines "physician owner or investor" to include any physician with a direct or indirect ownership or investment interest in the hospital. Under the definition of "indirect ownership or investment interest" at § 411.353(b)(5), only "referring physicians" can have an indirect ownership or investment interest in a DHS entity. We caution that we would view with great suspicion any arrangements in which physician owners or investors of a hospital in one State engage in a mutually beneficial cross-referral or cross-investment scheme with physician owners or investors of a hospital in another State.

Comment: Two commenters asserted that CMS minimized the significant difficulty hospitals will experience in monitoring and measuring the bona fide investment level, particularly with respect to indirect ownership interests held by non-referring physicians. The commenters stressed that it is unlikely that entities investing in hospitals such as trusts, private equity funds, and contractually affiliated health care providers, monitor whether they or their shareholders are directly or indirectly owned by physicians, particularly if those physicians are not referring physicians or physicians on the medical staff of the hospital. The commenters further stated that interests in hospitals may be transferred voluntarily in subsequent transactions beyond the reach of the hospital, or involuntarily through devise or bequest. The commenters contended that monitoring these transactions is a daunting task not suited to the normal operations of a hospital.

Response: We appreciate the commenters' concerns. Section 6001 defines the term "physician owner or investor" to mean "a physician (or immediate family member of such physician) with a direct or indirect ownership or investment interest in the hospital." Under the definition of "indirect ownership or investment interest" at § 411.353(b)(5), there must be an unbroken chain of ownership or investments between the referring physician and the DHS entity and the DHS entity must have actual knowledge of, or act in reckless disregard or deliberate ignorance of, the fact that the referring physician (or immediate family member) has some ownership or investment interest in the entity furnishing DHS. Thus, the bona fide investment level may be calculated without regard to any ownership or investment interest that does not satisfy this standard. We note that, as provided in § 411.354(b)(5)(ii), an indirect ownership or investment interest exists even though the DHS entity does not know, or acts in reckless disregard or deliberate ignorance of, the precise composition of the unbroken chain or the specific terms of the ownership or investment interests that form the links in the chain.

Comment: One commenter sought clarification regarding the requirement at section 1877(i)(1)(D)(iii) of the Act, which provides that a hospital may not directly or indirectly provide loans or financing to assist a physician acquiring an investment in the hospital. The commenter requested clarification that this limitation will not affect the current practice whereby an affiliate (for

example, a parent company) makes a loan to a hospital that has physician owners when the terms of such loans are commercially reasonable, provide for an interest rate above the lender's cost of funds, are secured by the assets of the borrower, and are repaid at maturity prior to distribution to the investors.

Response: Section 1877(i)(1)(D)(iii) of the Act would not preclude the parent company from making a loan to the physician-owned hospital, as long as the loan is being made and used for purposes other than assisting physicians in the acquisition of ownership or investment interests in the hospital.

After consideration of the public comments we received, we are finalizing proposed § 411.362(b)(4), with the modification to paragraph (b)(4)(i) discussed above.

5. Patient Safety

Section 1877(i)(1)(E) of the Act, as added by the Affordable Care Act, requires a hospital that is owned or invested in by physicians to disclose to a patient before admission if it does not have a physician available on the premises to provide services during all hours that the hospital is providing services to such patient. Following this disclosure, the hospital must receive a signed acknowledgment of such fact from the patient. In addition, the hospital must have the capacity to provide assessment and initial treatment for patients and refer and transfer such patients to hospitals with the capability to treat the patients involved. We see no reason to treat the safety of inpatients differently than outpatients. Accordingly, given the language and purpose of the statute, in the August 3, 2010 proposed rule (75 FR 46434), we proposed to apply these patient safety requirements to inpatients as well as outpatients. Hospitals must meet these requirements no later than September 23, 2011. We proposed to incorporate these provisions into our regulations at § 411.362(b)(5).

Comment: One commenter questioned whether a hospital would be in compliance with the exception contained in § 411.362(b)(5)(i) if it inadvertently failed to obtain a written acknowledgment from the patient stating that the patient understood that a physician was not available to provide services during all hours that the hospital was providing services to such patient.

Response: A failure by the hospital to obtain a signed acknowledgment from the patient, inadvertent or not, would constitute non-compliance with this statutory provision. As a matter of prudent business practice, hospitals should include the notice with other papers that must be signed by the patient or the patient's representative at the time of registration.

Comment: One commenter recommended that the hospital's responsibility to obtain the patient's signed acknowledgment, following the hospital's preadmission disclosure to the patient that the hospital does not have a physician available on the premises to provide services during all hours in which the hospital is providing services to the patient, should be done in conjunction with the registration process and not in advance of admission.

Response: If a hospital obtains the required signed acknowledgment during a registration process that occurs prior to admission, the hospital would be in compliance with this statutory provision.

Comment: One commenter suggested that a physician-owned hospital would meet the requirement of having physician coverage 24 hours a day, 7 days a week if the hospital physically adjoins another hospital and there is a coverage and transfer agreement in place that requires immediate presence of a physician to address the issue. The commenter believed such a physician-owned hospital should not be required to make a preadmission disclosure to a patient in accordance with section 1877(i)(1)(E)(i) of the Act.

Response: In the situation described, because the physician-owned hospital will always have a physician available on its premises to provide services during all hours in which the hospital is providing services to a patient, we agree that the hospital would not be required to make the preadmission disclosures mandated by section 1877(i)(1)(E)(i) of the Act.

Comment: One commenter supported the proposed amendment to § 482.12, which would require hospitals, as a condition of participation, to have the capacity to provide assessment and initial treatment for all patients and the ability to transfer patients to hospitals that have the ability to treat the patients. The commenter sought clarification regarding the terms "capacity" and "initial treatment" and inquired if the provision was intended to apply to inpatients, outpatients, or emergency department patients.

Response: We withdraw this proposal. We do not believe it is necessary to modify the hospital conditions of participation to reflect the provision in section 1877(i)(1)(E)(ii) of the Act.

In this final rule, we are finalizing proposed § 411.362(b)(5) regarding "Patient Safety" without modification.

6. Conversion From ASC

Section 1877(i)(1)(F) of the Act, as added by the Affordable Care Act, also prohibits the use of the rural provider and whole hospital exceptions by physician-owned hospitals that were converted from an ASC to a hospital on or after March 23, 2010. We proposed to add § 411.362(b)(6) to reflect this provision in our regulations.

Comment: Two commenters stated that the proposed rule did not offer any guidance as to what constitutes a "conversion." The commenters urged CMS to provide further guidance.

Response: We decline to provide a specific definition of "conversion." Whether an ASC has been converted to a physician-owned hospital on or after March 23, 2010 will depend on the facts. In some cases, the existence of a conversion may be obvious (for example, when an ASC that is wholly-owned by physicians terminates its Medicare ASC agreement on June 1, 2010, and obtains a Medicare hospital provider agreement or hospital license effective on or after June 1, 2010, for a hospital that occupies the same premises as the former ASC and is physician owned). Parties may submit an advisory opinion request pursuant to § 411.372 if they are uncertain whether a conversion has occurred.

After consideration of the public comments we received, we are finalizing, without modification, our proposed regulations at § 411.362(b)(6) that the hospital must not have been converted from an ASC to a hospital on or after March 23, 2010.

7. Publication of Information Reported

Section 1877(i)(2) of the Act requires that the Secretary publish, and update on an annual basis, the information submitted by hospitals under section 1877(i)(1)(C) of the Act on the CMS Web site. As with the annual report requirement set forth in section XVIII.B. of the proposed rule (now section XXII.B. of this final rule), we did not make a proposal related to this provision in the proposed rule. We did not receive any public comments regarding this matter.

8. Enforcement

Section 6001(b)(1) of the Affordable Care Act requires the Secretary to establish policies and procedures to ensure compliance with the requirements described in section 1877(i) of the Act, and states that these policies and procedures may include

unannounced site reviews of hospitals. Section 6001(b)(2) of the Affordable Care Act requires the Secretary, beginning no later than May 1, 2012, to conduct audits to determine if physician-owned hospitals are in compliance with section 1877(i)(1) of the Act. In the August 3, 2010 proposed rule (75 FR 46434 through 46435), we indicated that we would comply with the statutory mandate, but did not propose any regulations on this topic at that time.

Comment: Several commenters noted that the proposed rule did not address enforcement procedures. The commenters asserted that more guidance is necessary for hospitals to align their actions with section 6001 of the Affordable Care Act. One of the commenters urged CMS to conduct open door forum calls and other outreach efforts to educate hospitals and physicians concerning enforcement procedures.

Response: As stated in the proposed rule (75 FR 46434 through 46435), we will comply with the statutory mandate and provide hospitals and physicians with further guidance after the rules are finalized. In addition, we will explore various forms of outreach, including, but not limited to, open door forums.

D. Related Changes to Provider Agreement Regulations

Section 1866 of the Act states that a provider of services shall be qualified to participate in the Medicare program and shall be eligible for Medicare payments if it files a Medicare provider agreement and abides by the requirements applicable to Medicare provider agreements. These requirements are incorporated in our regulations at 42 CFR Part 489, Subparts A and B (Provider Agreements and Supplier Approval). Section 1861(e) of the Act defines the term "hospital." Section 1861(e)(9) of the Act defines a hospital and authorizes the Secretary to establish requirements as determined necessary in the interest of patient health and safety. Section 5006 of the Deficit Reduction Act of 2005 mandated the Secretary to develop a strategic and implementing plan to address certain issues with respect to physician ownership of specialty hospitals. As part of that plan, we used our authority under sections 1866 and 1861(e)(9) of the Act (as well as our general rulemaking authority under sections 1102 and 1871 of the Act) to impose certain additional requirements on physician-owned hospitals as part of their provider agreements. These new requirements were established in the FY 2008 IPPS final rule with comment period (72 FR 47385 through 47391) and the FY 2009 IPPS final rule (73 FR 48686 through 48688).

Specifically, we amended the regulations at § 489.3 governing Medicare provider agreements to define a "physician-owned hospital" as any participating hospital (including a CAH) in which a physician or immediate family member of a physician has an ownership or investment interest, unless the ownership or investment interest satisfies the exceptions at § 411.356(a) or (b) regarding publicly-traded securities and mutual funds. In addition, we added a new provision at § 489.20(u)(1) to require a physician-owned hospital to agree to furnish patients with written notice, in a manner reasonably designed to be understood by all patients, that it is physician-owned and that the list of physician owners is available upon request. Further, we added a new provision at § 489.20(u)(2) to compel hospitals to require that all physician owners who are also members of the hospital's medical staff to disclose, in writing, their ownership interest in the hospital (and that of any immediate family member) to all patients they refer to the hospital, as a condition of continued medical staff membership. Patient disclosure is required at the time the physician makes a referral.

We also added a new provision to require that hospitals and CAHs: (1) Furnish all patients written notice at the beginning of their inpatient hospital stay or outpatient service if a doctor of medicine or a doctor of osteopathy is not present in the hospital 24 hours per day, 7 days per week; and (2) describe how the hospital or CAH will meet the medical needs of any patient who develops an emergency medical condition at a time when no physician is present in the hospital or CAH. These requirements are codified at § 489.20(w). The requirements of §§ 489.20(u) and (w) were made applicable to both inpatient hospital stays and outpatient services because, as we stated in the FY 2008 IPPS final rule with comment period, these provisions are in the interest of the health and safety of all individuals who receive services in these institutions. The notice requirements are intended to permit individuals to make more informed decisions regarding their treatment.

In the August 3, 2010 proposed rule (75 FR 46435), we proposed to modify the Medicare provider agreement regulations in Subpart B of Part 489 in order to make the rules consistent with new § 411.362, as required by the Affordable Care Act. We stated our belief that incorporating the additional requirements of the Affordable Care Act into Part 489 would be in the best interest of the health and safety of individuals who receive services in hospitals and CAHs. With respect to § 489.20(u), we proposed to: (1) Add a provision in § 489.20(u)(1)(ii) to specify that the hospital must disclose on any public Web site for the hospital and in any public advertising that it is owned or invested in by physicians; (2) amend § 489.20(u)(2) to specify that a referring physician owner or investor must also disclose in writing, if applicable, the treating physician's ownership or investment interest in the hospital; and (3) add § 489.20(u)(3) to specify that a hospital may not condition any physician ownership or investment interests either directly or indirectly on the physician making or influencing referrals to the hospital or otherwise generating business for the hospital.

Regarding § 489.20(w), we proposed to specify that, in the case of a hospital where a doctor of medicine or a doctor of osteopathy is not present in the hospital 24 hours per day, 7 days per week, before admitting a patient or providing an outpatient service, the hospital must receive a signed acknowledgment from the patient stating that the patient understands that a physician may not be present during all hours services are rendered to the patient.

We encouraged public comments on whether the changes to the provider agreement regulations (Part 489) are necessary or whether the amendments and additions made to the whole hospital and rural provider exceptions within subpart J of Part 411 of our regulations are sufficient to provide guidance relating to section 6001 of the Affordable Care Act.

Comment: Two commenters suggested that any changes to the existing provider agreement regulations in 42 CFR part 489 are unnecessary. The commenters stated that the proposed amendments to the whole hospital and rural provider exceptions in 42 CFR part 411, subpart J are sufficient to provide guidance to physician-owned hospitals. Another commenter supported entirely the proposal to make conforming changes to the provider agreement regulations.

Response: We are persuaded by the commenters who suggested that the proposed amendments and additions made to the whole hospital and rural provider exceptions in subpart J of part 411 are sufficient for providing the necessary guidance to physician-owned hospitals. For the most part, the proposed conforming language we added to the provider agreement regulations does not substantively

impact the health and/or safety of patients. As a result, we are not finalizing the following proposed modifications to part 489: (1) In § 489.20(u)(1)(ii) concerning a hospital's responsibility to disclose physician ownership on a Web site and in any public advertising; (2) in § 489.20(u)(2) concerning a referring physician's responsibility to disclose to the patient any ownership interest in the hospital by a treating physician; and (3) in § 489.20(u)(3) concerning a hospital's responsibility not to condition any physician ownership either directly or indirectly on the physician owner making or influencing referrals to the hospital or otherwise generating business for the hospital.

However, we are finalizing, as proposed, § 489.20(w)(2), which requires a hospital to obtain a signed acknowledgment from a patient (before admitting the patient or providing an outpatient service to the patient) stating that the patient understands that a physician may not be present during all hours services are furnished to the patient. This provision is important to include in Part 489 as it addresses the patient health and safety concerns raised by the Affordable Care Act.

E. Conditions of Participation for Hospitals

In the proposed rule, we inadvertently included proposed changes to the regulatory text at § 482.12(g), concerning the condition of participation for a hospital's governing body. As discussed above, in this final rule, we are withdrawing this proposal.

F. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995, we are required to provide 60-day notice in the **Federal Register** and to solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. In order to fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

In the August 3, 2010 proposed rule (75 FR 46436), we solicited public comments on each of the issues outlined above regarding the provisions of section 6001 of the Affordable Care Act relating to physician self-referrals that were discussed in section XVIII.A. through D. of the proposed rule (now in sections XXII.A through D. of this final rule) that contained information collection requirements. We discuss these provisions below and address any public comments that we received in response to our solicitation.

As discussed in section XVII.C.4. and D. of the preamble of the August 3, 2010 proposed rule (and section XXII.C.4. and D. of this final rule), current § 489.20(u)(1) states that, in the case of a physician-owned hospital as defined in § 489.3, the hospital must furnish written notice to all patients at the beginning of their hospital stay or outpatient visit that the hospital is a physician-owned facility. Current § 489.20(u)(2) provides that hospitals must require each physician who is a member of the hospital's medical staff to agree, as a condition of his or her continued medical staff membership or admitting privileges, to disclose in writing to all patients the physician refers to the hospital any ownership or investment interest held by the physician or an immediate family member of the physician. We proposed to amend § 489.20(u)(2) to correspond to changes we proposed at the same time to the physician self-referral regulations. Specifically, we proposed to modify § 489.20(u)(2) to expand the physician disclosure obligation to include disclosure of the treating physician's ownership or investment interest in the hospital. The burden associated with the requirements in this section is the time and effort necessary for hospitals and physicians to furnish the required notices. This requirement is subject to the PRA; however, the associated burden under the existing § 489.20(u) is currently approved under OCN 0938–1034, with a February 28, 2011 expiration date.

Section 6001 of the Affordable Care Act amended the rural provider and whole hospital exceptions to the physician self-referral prohibition in section 1877 of the Act. To implement these provisions, we proposed to add § 411.362 to our regulations and to amend § 489.20(u)(2) (we note that we are not finalizing the proposed amendment to § 489.20(u)(2) in this final rule, as discussed below). We proposed new § 411.362(b)(3)(ii)(A), which would require physician-owned hospitals to have procedures in place to require that each referring physician agree, as a condition of his or her continued medical staff membership or admitting privileges, to provide written disclosure of his or her ownership or investment interest in the hospital (and, if applicable a treating physician's ownership or investment interest in the hospital) to all patients whom the physician refers to the hospital. This provision imposes a burden on both hospitals and physicians.

With respect to hospitals, we indicated in the proposed rule that the burden associated with this requirement is the time and effort necessary for hospitals to develop, draft, and implement changes to its medical staff bylaws and other policies governing admitting privileges. Approximately 265 hospitals would be required to comply with these requirements. We estimate that it would require a hospital's general counsel 2 hours to revise a hospital's medical staff bylaws and policies governing admitting privileges. Therefore, the total annual hospital burden would be 530 hours at a cost of $32,875.90. As discussed earlier in section XXII.D. of this final rule, based upon public comments we received, we are not finalizing the proposed amendment to § 489.20(u)(2) that the referring physician must provide written disclosure of the treating physician's ownership or investment interest in the hospital. However, we are finalizing the proposed requirement at § 411.362(b)(3)(ii)(A).

With respect to physicians, the burden associated with this requirement is the time and effort necessary for a referring physician owner or investor to develop a list of all other physician owners or investors in the hospital and draft a formal notice to patients that discloses the referring physician's ownership or investment interest in the hospital, informs the patient that his or her treating physician(s) may have an ownership or investment interest in the hospital, and directs the patient to review a list identifying all other physician owners or investors in the hospital. This list may be used by patients in making their health care decisions. Under existing § 489.20(u)(1), hospitals are currently required to provide a list of their physician owners or investors to patients upon request at the beginning of their inpatient stay or outpatient visit. Because hospitals already maintain lists of their owners and investors, we estimate that it will take each physician 1 hour annually to obtain such a list from the hospital, draft a disclosure notice, and make copies that will be distributed to patients. In addition, we estimate that it will take 30 seconds to provide the

disclosure notice to each patient and an additional 30 seconds to record proof of disclosure in each patient's medical record. Although we can estimate the number of physician-owned hospitals, we are unable to quantify the number of physicians (or their immediate family members), who possess an ownership or investment interest in hospitals. There are limited data available concerning physician ownership in hospitals. The studies to date, including those by CMS and the GAO, pertain to physician ownership in specialty hospitals (cardiac, orthopedic, and surgical hospitals). These specialty hospitals published data concerning the average percentage of shares of direct ownership by physicians (less than 2 percent), indirect ownership through group practices, and the aggregate percentage of physician ownership, but did not publish the number of physician owners in these types of hospitals. More importantly, § 489.20(u)(2) applies to physician owners of any type of hospital. Our other research involved a review of enrollment data. However, the CMS Medicare enrollment application (CMS–855) requires physicians to report only those ownership interests that are 5 percent or more (direct or indirect), and thus, most physician ownership is not captured. While we acknowledge there is a burden associated with this information collection requirement, we have no way to quantify this requirement's burden. Therefore, because we are unable to estimate the total physician burden associated with this reporting requirement, we proposed to assign 1 burden hour to this requirement. We sought public comments pertaining to this burden. However, we did not receive any public comments. Therefore, we are finalizing the burden estimate of 1 hour.

Existing § 489.20(w) requires hospitals, as defined in § 489.24(b), to furnish all patients notice in accordance with § 482.13(b)(2), at the beginning of their hospital stay or outpatient visit if a doctor of medicine or a doctor of osteopathy is not present in the hospital 24 hours per day, 7 days per week. The notice must indicate how the hospital will meet the medical needs of any inpatient who develops an emergency medical condition, as defined in § 489.24(b), at a time when there is no physician present in the hospital. The burden associated with this requirement is the time and effort necessary for each hospital to develop a standard notice to furnish to its patients. Although this requirement is subject to the PRA, the associated burden is approved under OCN 0938–1034, with an expiration date of February 28, 2011.

Sections 489.20(w)(2) and 411.362(b)(5)(i) require that, following a hospital's disclosure to a patient that it does not have a physician available during all hours that the hospital is providing services to such patient, the hospital must obtain a signed acknowledgment from the patient stating that the patient understands that no physician is available for that period. The burden associated with these requirements is the time and effort necessary for each hospital to add an acknowledgment line to its current form, disclose the form to the patient, obtain the patient's signature, and copy and record the form in the patient's medical record. The requirements in § 489.20(w) applies to all hospitals (not just physician-owned hospitals), as defined in § 489.24(b). We estimate that there are approximately 2,557 hospitals and CAHs that may not have a physician on site at all times. We estimate that it will take each hospital 30 minutes to amend its current disclosure form to add an acknowledgment line, an additional 30 seconds to obtain the patient's signature, and an additional 30 seconds to include a copy of the notice in the patient's medical record. The estimated annual burden associated with developing an amended form, obtaining patient signatures, and copying and recording the form is 1,196,932.6 hours at a cost of approximately $18,518,081. We did not receive any public comments regarding this requirement. Therefore, we are finalizing the burden estimate as proposed.

Section 411.362(b)(3)(ii)(C) requires disclosure by a hospital, on any public Web site for the hospital and in any public advertising, that the hospital is owned or invested in by physicians. The burden associated with this disclosure requirement is the time and effort necessary for hospitals to draft and post such a disclosure on their Web sites (where applicable) and to include such a disclosure in any existing or future public advertising that the hospitals may utilize. We estimate that 265 hospitals will be required to comply with this requirement. In addition, we estimate that it will take each hospital 1 hour to develop and place this information on its Web site and/or in a public advertisement. The estimated annual hospital burden associated with placing the aforementioned information in Web sites, public advertisement, or both is 265 hours at a cost of $3,993.55. In addition, we estimate that it will take 30 minutes annually for a hospital to review and update the information contained in its Web site, public advertising or both. The estimated annual burden associated with the annual review and update of the information is 132.5 hours at a cost of $1,996.77. As discussed in section XXII.D. of this final rule), we have concluded that a proposed conforming change to § 489.20(u)(1)(ii) is unnecessary, and therefore, we are not finalizing that proposed regulation.

G. Regulatory Flexibility Analysis

We have examined the impacts of this final rule as required by Executive Order 12866 (September 1993, Regulatory Planning and Review), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4), Executive Order 13132 on Federalism, and the Congressional Review Act (5 U.S.C. 804(2)).

Executive Order 12866 directs agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). A regulatory impact analysis (RIA) must be prepared for major rules that have economically significant effects ($100 million or more in any 1 year) or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal government or communities (58 FR 51741).

We have determined that this final rule is not a major rule as defined in 5 U.S.C. 804(2).

The RFA requires agencies to analyze options for regulatory relief of small businesses if a rule has a significant impact on a substantial number of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. Many hospitals are considered to be small entities, either by being nonprofit organizations or by meeting the Small Business Administration (SBA) definition of a small business (hospitals having revenues of $34.5 million or less in any 1 year). (For details on the latest standards for health care providers, we refer readers to the SBA's Web site at: *http://sba.gov/idc/groups/public/documents/sba_homepage/serv_sstd_tablepdf.pdf* (refer to the 620000 series).) For purposes of the RFA, we have determined that many

hospitals will be considered small entities according to the SBA size standards. Individuals and States are not included in the definition of a small entity.

As discussed in sections XXII.A. through D. of this final rule, section 6001 of the Affordable Care Act amended section 1877 of the Act to impose additional requirements in order to qualify for the rural provider and hospital ownership or investment exceptions. Our policies in this final rule incorporate these requirements into our regulations. Most physicians who have ownership or investment interests in hospitals ("physician-owned hospitals") and who refer DHS to the hospital, are subject to the physician self-referral prohibition, and are unable to qualify for the ownership and investment exception at section 1877(d)(1) of the Act. Section 1877(d)(1) of the Act provides an exception for ownership or investment in publicly traded securities in a corporation where there is stockholder equity exceeding $75 million at the end of the corporation's most recent fiscal year or on average during the previous 3 fiscal years; or the ownership or investment interest involves mutual funds in a company that has assets greater than $75 million. Studies by the OIG and GAO have concluded that physician-owned hospitals tend to be smaller and are unable to meet the $75 million threshold. Therefore, most physician-owned hospitals avail themselves of the rural provider or hospital ownership exceptions (sections 1877(d)(2) and (d)(3) of the Act, respectively).

Our revisions to the regulations limit the creation of new Medicare-participating hospitals in which physician owners or investors intend to refer patients for DHS by requiring such hospitals to have physician ownership and a provider agreement in effect on December 31, 2010, as provided for by section 6001 of the Affordable Care Act. This revision affects facilities with physician ownership or investment that are currently under development but may be unable to have a provider agreement in effect on December 31, 2010. We believe there are only a few facilities or hospital projects under development that will be unable to meet either of these criteria.

In addition to the effect on the creation of new physician-owned hospitals, the revision of the regulations to incorporate the provisions of section 6001 of the Affordable Care Act will impact existing physician-owned hospitals that currently avail themselves of the rural provider or whole hospital exception. Specifically, a physician-owned hospital is prohibited from expanding the number of beds, operating rooms, and procedure rooms beyond those for which it was licensed as of March 23, 2010, or, in the case of a hospital that did not have a provider agreement in effect as of this date but does have a provider agreement in effect on December 31, 2010, the effective date of the provider agreement. We believe there are some hospitals that were in the midst of an expansion that was not completed by March 23, 2010 (or, in the case of a hospital that did not have a provider agreement in effect as of this date but does have a provider agreement in effect on December 31, 2010), and thus, may not be able to use the new beds, operating rooms, and procedures rooms. We believe that most facilities and their investors were aware of the possible legislation that will limit facility expansion and, thus, did not continue to pursue expansion of their facilities.

Our regulations require hospitals to have procedures in place that require referring physicians to disclose to patients the referring physicians' ownership or investment interests in the hospital, as well as any ownership or investment interest in the hospital held by a treating physician. This policy also requires hospitals to disclose on any public Web site for the hospital or in any public advertising that it is owned or invested in by physicians. Finally, under the revision of the regulations, a hospital may not condition any physician ownership or investment either directly or indirectly on the physician making or influencing referrals to the hospital or otherwise generating business for the hospital. Most physician-owned hospitals comply with the current provisions of § 489.20(u). Thus, they have procedures in place to require referring physician owners or investors to disclose their ownership or investment interests to patients. We believe most physicians and hospitals will be minimally affected by the additional requirements.

Our revisions to the regulations require that hospitals must ensure that all ownership and investment interests are *bona fide*, a step that we believe most prudent hospitals are already undertaking. We believe most of the new statutory and regulatory provisions will have little, if any, impact on physician-owned hospitals or physicians. The only provision that may have a minor impact is the provision found under section 1877(i)(1)(D)(*i*) of the Act and § 411.362(b)(4)(i) of the regulations that prohibits physician-owned hospitals from increasing the percentage of the total value of the ownership or investment interests held in the hospital, or in an entity whose assets include the hospital, by physician owners or investors beyond that which existed on March 23, 2010. Therefore, hospitals and other entities that own the hospital must monitor the percentages of ownership or investment to ensure that the percentage is not increased. We believe this provision will have a minor effect on some hospitals and their physician owners or investors.

Our revisions to the regulations also require hospitals to take certain steps to ensure patient safety, most of which are practices or procedures that we believe most hospitals currently undertake. Building upon the safety requirements found in existing § 489.20(w), we are requiring under §§ 411.362(b)(5)(i) and 489.20(w)(2) that, before admitting a patient, a hospital that does not have a physician available on the premises to provide services during all hours in which the hospital is providing services to the patient, must receive a signed acknowledgment from the patient stating that the patient understands that a physician may not be present during the time services are furnished to a patient. In addition, §§ 411.362(b)(5)(ii) and 489.20(w)(1) will require hospitals to have the capacity to provide assessment and initial treatment for patients and the ability to refer and transfer patients to hospitals with the capability to treat the needs of the patient involved. We believe requesting a signed acknowledgment will impose a minimal burden on hospitals. Also, most hospitals currently have in place procedures to ensure that they have the capacity to provide assessment and initial treatment for patients and the ability to refer and transfer patients.

Lastly, our revisions to the regulations prohibit a facility that was previously an ASC and was converted into a hospital from qualifying for the rural provider or whole hospital ownership exceptions to the self-referral prohibition. Although we have no direct data on this issue, we believe there are only a few ASCs that are being converted to a hospital, and, thus, the effect is minimal.

The changes concerning disclosure of physician ownership in hospitals and patient safety are consistent with the physician self-referral statute and regulations, our existing regulations governing basic commitments of providers, and the current practices of most hospitals. Thus, our requirements will present a negligible impact on physician-owned hospitals. Physician-owned hospitals will have a one-time cost associated with creating or modifying a notice to be used when a physician is not on the premises 24

hours a day. In addition, these hospitals will incur the costs associated with ensuring that a signed acknowledgment is received from patients. Similarly, the costs borne by individual physicians to implement the provisions will be limited to a one-time cost associated with developing a disclosure notice that discloses the ownership of the referring and, where applicable, the treating physician.

Overall, we believe that beneficiaries will be positively impacted by these provisions. Specifically, additional information concerning disclosures of ownership and patient safety measures equip patients to make informed decisions about where they elect to receive care. Our policies make no significant changes that have the potential to impede patient access to health care facilities and services. We believe that our policies are necessary to conform our regulations to the amendments to section 1877 of the Act. We also believe the regulations will help minimize anticompetitive behavior that can affect the decision as to where a beneficiary receives health care services and will possibly enhance the quality of the services furnished.

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 603 of the RFA. With the exception of hospitals located in certain New England counties, for purposes of section 1102(b) of the Act, we now define a small rural hospital as a hospital that is located outside an urban area and has fewer than 100 beds. Section 601(g) of the Social Security Amendments of 1983 (Pub. L. 98–21) designated hospitals in certain New England counties as belonging to the adjacent urban areas. Thus, we continue to classify these hospitals as urban hospitals.

We believe that our policies in this final rule will affect a relatively small number of physician-owned hospitals and physicians. We are uncertain of the exact numbers of hospitals with physician ownership or investment that will be impacted by the policies and their restrictions. However, the most recent studies by CMS (August 8, 2006 Final Report to the Congress Required under Section 5006 of the Deficit Reduction Act of 2005) and MedPAC (June 2005 Report to the Congress) concluded that there were approximately 128 physician-owned specialty hospitals (those that focus primarily on patients with a cardiac condition, orthopedic condition, or those receiving a surgical procedure). We recognize that there are other hospitals with physician ownership that do not meet the definition of a specialty hospital but we do not have verifiable data on the number of these facilities. However, we have recently received information from a trade association representing physician-owned hospitals that there are approximately 265 hospitals that will be subject to the provisions of our final rule with comment period.

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. That threshold level is currently approximately $135 million. This final rule will not mandate any requirements for State, local, or tribal governments, nor will it affect private sector costs.

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct costs on State and local governments, preempts State law, or otherwise has Federalism implications. Because this regulation does not impose any costs on State or local governments, the requirements of Executive Order 13132 are not applicable.

In accordance with the provisions of Executive Order 12866, this final rule was reviewed by the Executive Office of Management and Budget.

XXIII. Interim Final Rule With Comment Period: Certified Registered Nurse Anesthetist (CRNA) Services Furnished in Rural Hospitals and Critical Care Hospitals (CAHs)

A. Background

In the FY 2011 IPPS/LTCH PPS final rule (75 FR 50299), we adopted a policy that would allow otherwise eligible critical access hospitals (CAHs) or hospitals that have reclassified from urban to rural status under section 1886(d)(8)(E) of the Act and 42 CFR 412.103 to receive reasonable cost payments for anesthesia services and related care furnished by nonphysician anesthetists (referred to in this section as CRNA pass-through payments), effective for cost reporting periods beginning on or after October 1, 2010. After the issuance of the final rule, we received an inquiry from a public commenter who indicated that CMS had misunderstood its submitted comment on the FY 2011 IPPS/LTCH PPS proposed rule in which the commenter stated that the policy should be effective on the basis of a calendar year, not a cost reporting period, as a hospital can only begin receiving CRNA pass-through payments on the basis of a calendar year. Our response to this public comment in the CY 2011 IPPS/LTCH PPS final rule (75 FR 50303) indicated that it was unnecessary to modify the effective date in the final rule because "if the provision is effective for cost reporting periods beginning on or after October 1, 2010, it will also be in effect for the calendar year beginning January 1, 2011." While this statement is accurate, it does not take into account that if a hospital's cost reporting period begins on or after January 1, 2011, the hospital will be ineligible to receive CRNA pass-through payments until the beginning of the next calendar year on January 1, 2012. Under the finalized policy in the CY 2011 IPPS/LTCH PPS final rule, hospitals reclassifying from urban to rural areas with cost reporting periods beginning between October 1, 2010, and December 31, 2011, will be able to first receive CRNA pass-through payments effective January 1, 2011, while hospitals with cost reporting periods beginning on or after January 1, 2011, will not be able to receive CRNA pass-through payments until one year later on January 1, 2012.

B. Revised Policy

Our intention in the FY 2011 IPPS/LTCH PPS final rule was not to make the provision for CRNA pass-through payment for anesthesia services and related care furnished by nonphysician anesthetists effective January 1, 2011, for some hospitals and CAHs and January 1, 2012, for other hospitals and CAHs. We believe the provision would be more equitable if it had a uniform effective date for all hospitals and CAHs. While we considered changing the effective date to January 1, 2011, for all hospitals and CAHs to begin receiving CRNA pass-through payments under this provision, we note that our regulations at 42 CFR 412.113(c)(2)(iii) state that the hospital or CAH must demonstrate to its fiscal intermediary prior to the start of the calendar year that it meets the requirements for receiving CRNA pass-through payments. For this reason, we believe the best option would be to adopt an effective date of December 2, 2010, for all hospitals and CAHs, which we are providing for in this interim final rule with comment period. With an effective date of December 2, 2010, hospitals and CAHs will be able to demonstrate prior to January 1, 2011, that they meet the requirements for receiving CRNA pass-

through payments beginning January 1, 2011. We are amending the regulations at 42 CFR 412.113(c)(2)(i)(A) to provide for an effective date of December 2, 2010, for all hospitals and CAHs to begin receiving CRNA pass-through payments for anesthesia services and related care furnished by nonphysician anesthetists.

C. Waiver of Notice of Proposed Rulemaking and Delay in the Effective Date

Because a change to the effective date of a regulation previously adopted through notice-and-comment rulemaking is a substantive change, we would ordinarily publish a notice of proposed rulemaking in the **Federal Register** and invite public comment on the proposed rule before making any change to the regulation. This procedure can be waived, however, if an agency finds good cause that notice-and-comment procedure is impracticable, unnecessary, or contrary to the public interest and incorporates a statement of the finding and its reasons in the rule issued. In addition, the Administrative Procedure Act (APA) normally requires a 30-day delay in the effective date of a final rule. Furthermore, the Congressional Review Act (CRA) generally requires an agency to delay the effective date of a major rule by 60 days in order to allow for congressional review of the agency action.

We believe there is good cause to waive notice-and-comment rulemaking to make a change in the effective date of the CRNA pass-through payment provision adopted in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50414). As stated above, we believe it would be inequitable and contrary to the public interest to have two different effective dates one year apart for hospitals and CAHs depending on when their cost reporting period begins. A change to the effective date will only advantage hospitals and CAHs without disadvantaging any hospital or CAH as it does not affect the ability of hospitals or CAHs with cost reporting periods beginning between October 1, 2010, and December 31, 2010, to begin receiving CRNA pass-through payments on January 1, 2011, and allows hospitals and CAHs with cost reporting periods beginning on any other date to receive CRNA pass-through payments one year earlier. Furthermore, because the purpose of making pass-through payments for CRNA services is to provide more favorable payment treatment for these services in order to improve access to anesthesia services in hospitals and CAHs that are in low population density areas, we believe it would serve the public interest to have this provision apply to all qualifying hospitals and CAHs during 2011, including those hospitals and CAHs that, under the existing regulations, cannot receive CRNA pass-through payments until January 1, 2012. Further, it would be impracticable to go through notice-and-comment rulemaking to achieve what we believe would be the more equitable result because there is insufficient time to complete a proposed rule, allow for a public comment period and prepare a final rule responding to those public comments prior to January 1, 2011, when hospitals and CAHs can next begin receiving CRNA pass-through payments.

For these reasons, in this interim final rule with comment period, we are adopting a change to the effective date of the CRNA pass-through provision originally adopted under § 412.113(c)(2)(i)(A) of the regulations in the FY 2011 IPPS/LTCH PPS final rule for FY 2011 (75 FR 50414) from "cost reporting periods beginning on or after October 1, 2010" to "December 2, 2010." Under this revision, hospitals and CAHs that are reclassified from urban to rural areas can demonstrate to their Medicare contractor on or after December 2, 2010, that they meet the requirements to receive CRNA pass-through payment under § 412.113(c)(2)(iii) in order to begin receiving payments on January 1, 2011.[38] Hospitals and CAHs may receive CRNA pass-through payment for any portion of a cost reporting period that occurs on or after January 1, 2011, provided all other requirements specified in § 412.113(c)(2)(iii) are met.

With respect to a delay in the effective date, this interim final rule with comment period is not a major rule because it does not have an annual effect on the economy of $100 million or more in any 1 year and will not adversely affect in a material way the economy, a section of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal government or communities. As this interim final rule with comment period is not a major rule, we are not required to provide a 60-day delay in its effective date. However, we are providing a 30-day delay in the effective date of this interim final rule with comment period, consistent with the APA. We also are providing a 60-day comment period to receive public comments, as specified in the **ADDRESSES** section of this document.

D. Response to Comments

Because of the large number of public comments we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the **DATES** section of this document, and, when we proceed with a subsequent document, we will respond to those comments in the preamble to that document.

E. Collection of Information Requirements

This interim final rule with comment period does not impose any new information collection and recordkeeping requirements. Consequently, it need not be reviewed by the Office of Management and Budget under the authority of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35).

F. Regulatory Impact Analysis

We have examined the impact of this interim final rule with comment period as required by Executive Order 12866 (September 1993, Regulatory Planning and Review), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4), Executive Order 13132 on Federalism, and the Congressional Review Act (5 U.S.C. 804(2)).

Executive Order 12866 directs agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). A regulatory impact analysis (RIA) must be prepared for major rules that have economically significant effects ($100 million or more in any 1 year) or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal government or communities (58 FR 51741). We have determined that this

[38] The December 2, 2010 effective date is intended to give hospitals and CAHs affected by the change in the effective date sufficient time to demonstrate to their Medicare contractor that they meet the requirements in 42 CFR 412.113(c)(2)(iii) to begin receiving CRNA pass-through payments effective January 1, 2011. If, pursuant to the terms of the existing regulations, hospitals and CAHs have already demonstrated prior to December 2, 2010, that they meet the requirements in § 412.113(c)(2)(iii) to begin receiving CRNA pass-through payments beginning January 1, 2011, they do not have to do so again as they will have already demonstrated prior to the start of the calendar year, consistent with both the existing regulations and the revised regulations, that they meet the requirements for receiving CRNA pass-through payments.

interim final rule with comment period is not a major rule as defined in 5 U.S.C. 804(2).

The RFA requires agencies to analyze options for regulatory relief of small businesses if a rule has a significant impact on a substantial number of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. Most hospitals, including CAHs, are considered to be small entities, either by being nonprofit organizations or by meeting the Small Business Administration (SBA) definition of a small business (hospitals having revenues of $34.5 million or less in any 1 year). (For details on the latest standards for health care providers, we refer readers to the SBA's Web site at: *http://sba.gov/idc/groups/public/documents/sba_homepage/serv_sstd_tablepdf.pdf* (refer to the 620000 series).) Individuals and States are not included in the definition of a small entity. For purposes of the RFA, we have determined that most of the affected hospitals and CAHs will be considered small entities according to the SBA size standards.

As discussed above, in this interim final rule with comment period, we are making a revision to the effective date of a change to the CRNA pass-through provision for hospitals and CAHs that have reclassified under section 1886(d)(8)(E) of the Act and § 412.103 of the regulations from "cost reporting periods beginning on or after October 1, 2010" to "December 2, 2010." This change to the effective date will allow hospitals and CAHs that have reclassified under section 1886(d)(8)(E) of the Act and § 412.103 of the regulations to begin receiving CRNA pass-through payments on January 1, 2011, instead of January 1, 2012, if they have a cost reporting period that begins on or after January 1, 2011. (The December 2, 2010 effective date gives these hospitals and CAHs 1 month to demonstrate that they are otherwise eligible to receive these pass-through payments). In the FY 2011 IPPS/LTCH PPS final rule (75 FR 50664), we indicated that it would be difficult to quantify the payment impact of the change to the regulations that would allow hospitals and CAHs reclassified under section 1886(d)(8)(E) of the Act and § 412.103 of the regulations because, in order to qualify to receive reasonable cost-based payment for anesthesia and related services provided by qualified nonphysician anesthetists, a rural hospital or CAH cannot exceed an annual limit of 800 surgical procedures requiring anesthesia. In addition, although a hospital or CAH may contract with more than one qualified nonphysician anesthetist and be paid based on reasonable cost for anesthesia and related services performed by these anesthetists, the total number of hours of services furnished by the nonphysician anesthetists may not exceed 2,080 hours annually. In the final rule, we indicated that we could not establish the number of facilities that would meet or exceed this threshold and, as a result, we could not quantify the impact of the change, but we stated our belief that the impact of the change to the regulations would be expected to be relatively minor. A change to the effective date will only affect a subset of those hospitals and CAHs affected by the change to the regulations adopted in the FY 2010 IPPS/LTCH PPS final rule. For this reason, we would similarly expect the change to the effective date in this interim final rule with comment period to have a minor impact on Federal expenditures.

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. With the exception of hospitals located in certain New England counties, for purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside an urban area and has fewer than 100 beds. Section 601(g) of the Social Security Amendments of 1983 (Pub. L. 98–21) designated hospitals in certain New England counties as belonging to the adjacent urban areas. Thus, we continue to classify these hospitals as urban hospitals. As this provision will only affect hospitals and CAHs that are geographically located in an urban area, but have reclassified as rural under section 1886(d)(8)(E) of the Act and § 412.103 of the regulations, the change may allow some reclassified small rural hospitals and CAHs to receive CRNA pass-through payments up to 1 year earlier than under the regulations with the prior effective date.

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation, by State, local, or tribal governments in the aggregate, or by the private sector. That threshold level is currently approximately $135 million. This interim final rule with comment period will not mandate any requirements for State, local, or tribal governments, nor will it affect private sector costs.

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct costs on State and local governments, preempts State law, or otherwise has Federalism implications. Because this regulation does not impose any costs on State or local governments, the requirements of Executive Order 13132 are not applicable.

In accordance with the provisions of Executive Order 12866, the Office of Management and Budget reviewed this interim final rule with comment period.

List of Subjects

42 CFR Part 410

Health facilities, Health professions, Laboratories, Medicare, Rural areas, X-rays.

42 CFR Part 411

Kidney diseases, Medicare, Physician referral, Reporting and recordkeeping requirements.

42 CFR Part 412

Administrative practice and procedure, Health facilities, Medicare, Puerto Rico, Reporting and recordkeeping requirements.

42 CFR Part 413

Health facilities, Kidney diseases, Medicare, Puerto Rico, Reporting and recordkeeping requirements.

42 CFR Part 416

Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 419

Hospitals, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 489

Health facilities, Medicare, Reporting and recordkeeping requirements.

■ For reasons stated in the preamble of this document, the Centers for Medicare & Medicaid Services is amending 42 CFR Chapter IV as set forth below:

PART 410—SUPPLEMENTARY MEDICAL INSURANCE (SMI) BENEFITS

■ 1. The authority citation for part 410 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

■ 2. Section 410.2 is amended by—
■ a. Under the definitions of "Community mental health center (CMHC)", removing the word "and" at the end of paragraph (4); removing the period at the end of paragraph (5) and adding in its place "; and"; and adding a new paragraph (6).
■ b. Revising the definition of "Partial hospitalization services".

The revisions and additions read as follows:

§ 410.2 Definitions.

* * * * *

Community mental health center (CMHC) means an entity that—

* * * * *

(6) Provides at least 40 percent of its services to individuals who are not eligible for benefits under title XVIII of the Social Security Act.

* * * * *

Partial hospitalization services means a distinct and organized intensive ambulatory treatment program that offers less than 24-hour daily care other than in an individual's home or in an inpatient or residential setting and furnishes the services as described in § 410.43.

* * * * *

■ 3. Section 410.27 is amended by—
■ a. Removing the word "and" at the end of paragraph (a)(1)(iii).
■ b. Revising paragraph (a)(1)(iv).
■ c. Adding a new paragraph (a)(1)(v).
■ d. Adding paragraph (a)(2).
■ e. Revising paragraphs (e) and (f).
■ f. Deleting paragraph (g).

The addition and revisions read as follows:

§ 410.27 Outpatient hospital or CAH services and supplies incident to a physician or nonphysician practitioner service: Conditions.

(a) * * *

(1) * * *

(iv) Under the direct supervision of a physician or a nonphysician practitioner as specified in paragraph (f) of this section. Nonphysician practitioners may directly supervise services that they may personally furnish in accordance with State law and all additional requirements, including those specified in §§ 410.71, 410.73, 410.74, 410.75, 410.76, and 410.77. For services furnished in the hospital or CAH, or in an outpatient department of the hospital or CAH, both on and off-campus, as defined in § 413.65 of this subchapter, "direct supervision" means that the physician or nonphysician practitioner must be immediately available to furnish assistance and direction throughout the performance of the procedure. It does not mean that the physician or nonphysician practitioner must be present in the room when the procedure is performed. For pulmonary rehabilitation, cardiac rehabilitation, and intensive cardiac rehabilitation services, direct supervision must be furnished by a doctor of medicine or osteopathy, as specified in §§ 410.47 and 410.49, respectively; and

(v) As nonsurgical extended duration therapeutic services.

(A) *Nonsurgical extended duration therapeutic services (extended duration services)* are hospital outpatient therapeutic services that can last a significant period of time, have a substantial monitoring component that is typically performed by auxiliary personnel, have a low risk of requiring the physician's or appropriate nonphysician practitioner's immediate availability after the initiation of the service, and are not primarily surgical in nature. For these services, Medicare requires a minimum of direct supervision during the initiation of the service which may be followed by general supervision at the discretion of the supervising physician or the appropriate nonphysician practitioner. For these services, "direct supervision" means the definition specified in paragraph (a)(1)(iv) of this section. "General supervision" means the definition specified at § 410.32(b)(3)(i).

(B) "Initiation" means the beginning portion of the non-surgical extended duration therapeutic service which ends when the patient is stable and the supervising physician or the appropriate nonphysician practitioner believes the remainder of the service can be delivered safely under general supervision.

(2) In the case of partial hospitalization services, also meet the conditions of paragraph (d) of this section.

* * * * *

(e) Services furnished by an entity other than the hospital or CAH are subject to the limitations specified in § 410.42(a).

(f) For purposes of this section, "nonphysician practitioner'" means a clinical psychologist, licensed clinical social worker, physician assistant, nurse practitioner, clinical nurse specialist, or certified nurse-midwife.

■ 4. Section 410.28 is amended by revising paragraph (e) to read as follows:

§ 410.28 Hospital or CAH diagnostic services furnished to outpatients: Conditions.

* * * * *

(e) Medicare Part B makes payment under section 1833(t) of the Act for diagnostic services furnished by or under arrangements made by the participating hospital only when the diagnostic services are furnished under the appropriate level of physician supervision specified by CMS in accordance with the definitions in this paragraph and in § 410.32(b)(3)(i), (b)(3)(ii), and (b)(3)(iii). Under general supervision at a facility accorded provider-based status, the training of the nonphysician personnel who actually perform the diagnostic procedure and the maintenance of the necessary equipment and supplies are the continuing responsibility of the facility. In addition—

(1) For services furnished directly or under arrangement in the hospital or in an on-campus or off-campus outpatient department of the hospital, as defined in § 413.65 of this subchapter, "direct supervision" means that the physician must be immediately available to furnish assistance and direction throughout the performance of the procedure. It does not mean that the physician must be present in the room where the procedure is performed.

(2) For services furnished under arrangement in nonhospital locations, "direct supervision" means the definition specified in § 410.32(b)(3)(ii).

* * * * *

■ 5. Section 410.152 is amended by revising paragraph (i)(2) to read as follows:

§ 410.152 Amounts of payment.

* * * * *

(i) * * *

(2) For ASC services furnished on or after January 1, 2008, in connection with the covered surgical procedures specified in § 416.166 of this subchapter, except as provided in paragraphs (i)(2)(i), (i)(2)(ii), and (l) of this section, Medicare Part B pays the lesser of 80 percent of the actual charge or 80 percent of the prospective payment amount, geographically adjusted, if applicable, as determined under Subpart F of Part 416 of this subchapter. Part B coinsurance is 20 percent of the actual charge or 20 percent of the prospective payment amount, geographically adjusted, if applicable

(i) If the limitation described in § 416.167(b)(3) of this subchapter applies, Medicare pays 80 percent of the amount determined under Subpart B of Part 414 of this subchapter and Part B coinsurance is 20 percent of the applicable payment amount, except as provided in paragraph (l) of this section.

(ii) Between January 1, 2008 and December 31, 2010, Medicare Part B

pays 75 percent of the applicable payment amount for screening flexible sigmoidoscopies and screening colonoscopies, and Part B coinsurance is 25 percent of the applicable payment amount.

* * * * *

PART 411—EXCLUSIONS FROM MEDICARE AND LIMITATIONS ON MEDICARE PAYMENT

■ 6. The authority citation for part 411 continues to read as follows:

Authority: Secs. 1102, 1860D–1 through 1860D–42, 1871, and 1877 of the Social Security Act (42 U.S.C. 1302, 1395w–101 through 1395w–152, 1395hh and 1395nn).

■ 7. Section 411.356 is amended by—
■ a. Revising paragraph (c)(1).
■ b. Removing the word "and" at the end of paragraph (c)(3)(ii).
■ c. Removing the period at the end of paragraph (c)(3)(iii) and adding "; and" in its place.
■ d. Adding a new paragraph (c)(3)(iv).

The revisions and addition read as follows:

§ 411.356 Exceptions to the referral prohibition related to ownership or investment interests.

* * * * *

(c) * * *

(1) A rural provider, in the case of DHS furnished in a rural area (as defined at § 411.351 of this subpart) by the provider. A "rural provider" is an entity that furnishes substantially all (not less than 75 percent) of the DHS that it furnishes to residents of a rural area and, for the 18-month period beginning on December 8, 2003 (or such other period as Congress may specify), is not a specialty hospital, and in the case where the entity is a hospital, the hospital meets the requirements of § 411.362 no later than September 23, 2011.

* * * * *

(3) * * *

(iv) The hospital meets the requirements described in § 411.362 not later than September 23, 2011.

■ 8. A new § 411.362 is added to read as follows:

§ 411.362 Additional requirements concerning physician ownership and investment in hospitals.

(a) *Definitions.* For purposes of this section—

Physician owner or investor means a physician (or immediate family member of the physician) with a direct or an indirect ownership or investment interest in the hospital.

Procedure room means a room in which catheterizations, angiographies, angiograms, and endoscopies are performed, except such term shall not include an emergency room or department (exclusive of rooms in which catheterizations, angiographies, angiograms, and endoscopies are performed).

(b) *General requirements.*

(1) *Physician ownership and provider agreement.* The hospital had physician ownership or investment on December 31, 2010; and a provider agreement under section 1866 of the Act in effect on that date.

(2) *Prohibition on facility expansion.* The hospital may not increase the number of operating rooms, procedure rooms, and beds beyond that for which the hospital is licensed on March 23, 2010 (or, in the case of a hospital that did not have a provider agreement in effect as of this date, but does have a provider agreement in effect on December 31, 2010, the effective date of such agreement), unless an exception is granted by the Secretary pursuant to section 1877(i)(3) of the Social Security Act.

(3) *Disclosure of conflicts of interest.*

(i) At such time and in such manner as specified by CMS, the hospital must submit an annual report to CMS containing a detailed description of the identity of each owner or investor in the hospital and the nature and extent of all ownership and investment interests in the hospital.

(ii) The hospital must—

(A) Require each referring physician owner or investor who is a member of the hospital's medical staff to agree, as a condition of continued medical staff membership or admitting privileges, to provide written disclosure of his or her ownership or investment interest in the hospital (and, if applicable, the ownership or investment interest of any treating physician) to all patients whom the physician refers to the hospital. Disclosure must be required by a time that permits the patient to make a meaningful decision regarding the receipt of care.

(B) Not condition any physician ownership or investment interests either directly or indirectly on the physician owner or investor making or influencing referrals to the hospital or otherwise generating business for the hospital.

(C) Disclose on any public Web site for the hospital and in any public advertising that the hospital is owned or invested in by physicians.

(4) *Ensuring bona fide investment.* The hospital satisfies the following criteria:

(i) The percentage of the total value of the ownership or investment interests held in the hospital, or in an entity whose assets include the hospital, by physician owners or investors in the aggregate does not exceed such percentage as of March 23, 2010.

(ii) Any ownership or investment interests that the hospital offers to a physician owner or investor are not offered on more favorable terms than the terms offered to a person who is not a physician owner or investor.

(iii) The hospital (or any owner or investor in the hospital) does not directly or indirectly provide loans or financing for any investment in the hospital by a physician owner or investor.

(iv) The hospital (or any owner or investor in the hospital) does not directly or indirectly guarantee a loan, make a payment toward a loan, or otherwise subsidize a loan, for any individual physician owner or investor or group of physician owners or investors that is related to acquiring any ownership or investment interest in the hospital.

(v) Ownership or investment returns are distributed to each owner or investor in the hospital in an amount that is directly proportional to the ownership or investment interest of such owner or investor in the hospital.

(vi) Physician owners and investors do not receive, directly or indirectly, any guaranteed receipt of or right to purchase other business interests related to the hospital, including the purchase or lease of any property under the control of other owners or investors in the hospital or located near the premises of the hospital.

(vii) The hospital does not offer a physician owner or investor the opportunity to purchase or lease any property under the control of the hospital or any other owner or investor in the hospital on more favorable terms than the terms offered to an individual who is not a physician owner or investor.

(5) *Patient safety.* The hospital satisfies the following criteria:

(i) If the hospital does not have a physician available on the premises to provide services during all hours in which the hospital is providing services to the patient, the hospital must disclose this information to the patient. Before providing services to the patient, the hospital must receive a signed acknowledgment from the patient stating that the patient understands that a physician may not be present during all hours services are furnished to the patient.

(ii) The hospital must have the capacity to provide assessment and initial treatment for all patients, and the ability to refer and transfer patients to

hospitals with the capability to treat the needs of the patient that the hospital is unable to address. For purposes of this paragraph, the hospital inpatient stay or outpatient visit begins with the provision of a package of information regarding scheduled preadmission testing and registration for a planned hospital admission for inpatient care or an outpatient service.

(6) *Prohibition on conversion from an ambulatory surgery center.* The hospital must not have been converted from an ambulatory surgical center to a hospital on or after March 23, 2010.

PART 412—PROSPECTIVE PAYMENT SYSTEMS FOR INPATIENT HOSPITAL SERVICES

■ 9. The authority citation for part 412 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh), and sec. 124 of Pub. L. 106–113 (113 Stat. 1501A–332).

■ 10. Section 412.105 is amended by—
■ a. Revising paragraph (f)(1)(ii).
■ b. Revising paragraph (f)(1)(iii)(C).
■ c. Adding a new paragraph (f)(1)(iii)(D).
■ d. Revising paragraph (f)(1)(iv)(B).
■ e. Revising paragraph (f)(1)(iv)(C).
■ f. Revising paragraph (f)(1)(ix).

The revisions and addition read as follows:

§ 412.105 Special treatment: Hospitals that incur indirect costs for graduate medical education programs.

* * * * *

(f) * * *

(1) * * *

(ii) In order to be counted, the resident must be assigned to one of the following areas:

(A) The portion of the hospital subject to the hospital inpatient prospective payment system.

(B) The outpatient department of a hospital that meets provider-based status as defined at § 413.65(a)(2) of this subchapter.

(C) The portions of a hospital located in Puerto Rico that are subject to the hospital inpatient prospective payment system, including off-campus outpatient departments that meet provider-based status as defined at § 413.65(a)(2) of this subchapter.

(D) The portions of a hospital that are reimbursed under a reimbursement system authorized under section 1814(b)(3) of the Act.

(E) Effective for discharges occurring on or after October 1, 1997, the time spent by a resident in a nonprovider setting in patient care activities, as defined in § 413.75(b) of this subchapter, under an approved medical residency training program is counted towards the determination of full-time equivalency if the criteria set forth in § 413.78(c), (d), (e), (f), or (g) of this subchapter, as applicable, are met.

(iii) * * *

(C) Effective for cost reporting periods beginning on or after January 1, 1983, except for research activities described in paragraph (f)(1)(iii)(B) of this section, the time a resident is training in an approved medical residency program in a hospital setting, as described in paragraphs (f)(1)(ii)(A) through (f)(1)(ii)(D) of this section, must be spent in either patient care activities, as defined in § 413.75(b) of this subchapter, or in nonpatient care activities, such as didactic conferences and seminars, to be counted. This provision may not be applied in a manner that would require the reopening of settled cost reports, except those cost reports on which, as of March 23, 2010, there is a jurisdictionally proper appeal pending on direct GME or IME payments.

(D) Effective for cost reporting periods beginning on or after January 1, 1983, the time spent by a resident in an approved medical residency program on vacation, sick leave, or other approved leave that does not prolong the total time the resident is participating in the approved program beyond the normal duration of the program is countable. This provision may not be applied in a manner that would require the reopening of settled cost reports, except those cost reports on which, as of March 23, 2010, there is a jurisdictionally proper appeal pending on direct GME or IME payments.

(iv) * * *

(B)(*1*) Effective for portions of cost reporting periods beginning on or after July 1, 2005, a hospital's otherwise applicable FTE resident cap may be reduced if its reference resident level, as determined under § 413.79(c)(1)(ii)(A) of this subchapter, is less than its otherwise applicable FTE resident cap in a reference cost reporting period, in accordance with the provisions of § 413.79(c)(3) of this subchapter. The reduction is 75 percent of the difference between the otherwise applicable FTE resident cap and the reference resident level.

(*2*) Effective for portions of cost reporting periods beginning on or after July 1, 2011, a hospital's otherwise applicable FTE resident cap may be reduced if its reference resident level, as determined under § 413.79(c)(1)(ii)(B) of this subchapter, is less than its otherwise applicable FTE resident cap in a reference cost reporting period, in accordance with the provisions of § 413.79(m) of this subchapter. The reduction shall take into account the hospital's FTE resident cap as reduced under paragraph (f)(1)(iv)(B)(*1*). The reduction is 65 percent of the difference between the otherwise applicable FTE resident cap and the reference resident level.

(C)(*1*) Effective for portions of cost reporting periods beginning on or after July 1, 2005, a hospital may qualify to receive an increase in its otherwise applicable FTE resident cap (up to 25 additional FTEs) if the criteria specified in § 413.79(c)(4) of this subchapter are met.

(*2*) Effective for portions of cost reporting periods beginning on or after July 1, 2011, a hospital may qualify to receive an increase in its otherwise applicable FTE resident cap (up to 75 additional FTEs) if the criteria specified in § 413.79(n) of this subchapter are met.

* * * * *

(ix)(A) A hospital may receive a temporary adjustment to its FTE resident cap to reflect residents added because of another hospital's closure if the hospital meets the criteria specified in §§ 413.79(h)(1) and (h)(2) of this subchapter. If a hospital that closes its residency training program agrees to temporarily reduce its FTE resident cap according to the criteria specified in §§ 413.79(h)(1) and (h)(3)(ii) of this subchapter, another hospital(s) may receive a temporary adjustment to its FTE resident cap to reflect residents added because of the closure of the residency training program if the criteria specified in §§ 413.79(h)(1) and (h)(3)(i) of this subchapter are met.

(B) A hospital may receive a permanent adjustment to its FTE resident cap as a result of slots that were redistributed from a closed hospital, as defined at § 413.79(h)(1)(i) of this subchapter, if the hospital meets the requirements at § 413.79(o) of this subchapter.

* * * * *

■ 11. Section 412.113 is amended by revising paragraph (c)(2)(i)(A) to read as follows:

§ 412.113 Other payments.

* * * * *

(c) * * *

(2)(i) * * *

(A) The hospital or CAH is located in a rural area as defined in § 412.62(f) and is not deemed to be located in an urban area under the provisions of § 412.64(b)(3). Effective December 2, 2010, the hospital or CAH is either located in a rural area as defined at

§ 412.62(f) and is not deemed to be located in an urban area under the provisions of § 412.64(b)(3) or the hospital or CAH has reclassified as rural under the provisions at § 412.103.

* * * * *

PART 413—PRINCIPLES OF REASONABLE COST REIMBURSEMENT; PAYMENT FOR END-STAGE RENAL DISEASE SERVICES; OPTIONAL PROSPECTIVELY DETERMINED PAYMENT RATES FOR SKILLED NURSING FACILITIES

■ 12. The authority citation for part 413 continues to read as follows:

Authority: Secs. 1102, 1812(d), 1814(b), 1815, 1833(a), (i), and (n), 1861(v), 1871, 1881, 1883, and 1886 of the Social Security Act (42 U.S.C. 1302, 1395d(d), 1395f(b), 1395g, 1395l(a), (i), and (n), 1395x(v), 1395hh, 1395rr, 1395tt, and 1395ww); and sec. 124 of Pub. L. 106–133 (113 Stat. 1501A–332).

■ 13. Section 413.75 is amended by—

■ a. Revising paragraph (2) of the definition of "All or substantially all of the costs for the training program in the nonhospital setting".

■ b. Adding a definition of "Nonprovider setting that is primarily engaged in furnishing patient care".

The revision and addition read as follows:

§ 413.75 Direct GME payments: General requirements.

* * * * *

(b) * * *

All or substantially all of the costs for the training program in the nonhospital setting means—

* * * * *

(2) Effective for cost reporting periods beginning on or after July 1, 2007 and before July 1, 2010, at least 90 percent of the total of the costs of the residents' salaries and fringe benefits (including travel and lodging where applicable) and the portion of the cost of teaching physicians' salaries attributable to nonpatient care direct GME activities.

* * * * *

Nonprovider setting that is primarily engaged in furnishing patient care means a nonprovider setting in which the primary activity is the care and treatment of patients.

* * * * *

■ 14. Section 413.78 is amended by—

■ a. Revising the introductory text of paragraph (f).

■ b. Revising paragraph (f)(1).

■ c. Adding a new paragraph (g).

■ d. Adding a new paragraph (h).

The revisions and additions read as follows:

§ 413.78 Direct GME payments: Determination of the total number of FTE residents.

* * * * *

(f) For cost reporting periods beginning on or after July 1, 2007, and before July 1, 2010, the time residents spend in nonprovider settings such as freestanding clinics, nursing homes, and physicians' offices in connection with approved programs may be included in determining the number of FTE residents in the calculation of a hospital's resident count if the following conditions are met—

(1) The resident spends his or her time in patient care activities as defined at § 413.75(b), except that for cost reporting periods beginning on or after July 1, 2009, the time spent training in nonpatient care activities, such as didactic conferences and seminars, but excluding research not associated with the treatment or diagnosis of a particular patient, in a nonprovider setting that is primarily engaged in furnishing patient care activities, as defined at § 413.75(b), also may be counted.

* * * * *

(g) For cost reporting periods beginning on or after July 1, 2010, the time residents spend in nonprovider settings such as freestanding clinics, nursing homes, and physicians' offices in connection with approved programs may be included in determining the number of FTE residents in the calculation of a hospital's resident count if the following conditions are met—

(1) The resident spends his or her time—

(i) In patient care activities as defined at § 413.75(b); or

(ii) In nonpatient care activities, such as didactic conferences and seminars, but excluding research not associated with the treatment or diagnosis of a particular patient, in a nonprovider setting that is primarily engaged in furnishing patient care activities, as defined at § 413.75(b).

(2) The hospital or hospitals must incur the costs of the salaries and fringe benefits of the resident during the time the resident spends in the nonprovider setting. If more than one hospital incurs these costs, either directly or through a third party, the hospitals must count a proportional share of the time that residents train at the nonhospital setting(s) as recorded in a written agreement between the hospitals.

(i) Hospitals must have a reasonable basis for establishing that proportion of the cost and the FTE time that each will incur and count.

(ii) If hospitals already arrange payment to the nonhospital site via a written agreement as described in paragraph (g)(3)(ii) of this section, the proportion may be recorded in that agreement.

(iii) If hospitals choose to pay the nonhospital site concurrently as described in paragraph (g)(3)(i) of this section, the hospitals must record the proportion of cost and FTE time they are incurring and counting in a written agreement between the hospitals.

(3) The hospital or hospitals must comply with one of the following:

(i) The hospital or hospitals must incur the costs of the salaries and fringe benefits of the resident during the time the resident spends in the nonprovider setting by the end of the third month following the month in which the training in the nonhospital site occurred.

(ii) There is a written agreement between the hospital or hospitals and the outside entity that states that the residents' salaries and fringe benefits (including travel and lodging where applicable) during the time the resident spends in the nonhospital setting is to be paid by the hospital(s). Hospitals may modify the amounts specified in the written agreement by the end of the academic year (that is, June 30) to reflect that the costs of the training program in the nonhospital site have been incurred.

(4) The hospital is subject to the principles of community support and redistribution of costs as specified in § 413.81.

(5) For cost reporting periods beginning on or after July 1, 2010, a hospital must maintain and make available records of the FTE count determined for direct GME purposes under this section that its residents spend in nonprovider sites, in order to compare that time to the time spent by its residents in nonprovider sites in the base year of cost reporting periods beginning on or after July 1, 2009, and before June 30, 2010. The hospital must supply the CMS contractor with the data for each of its primary care programs on a program-specific basis, and with data for its nonprimary care programs on an overall basis.

(6) The provisions of paragraphs (g)(1)(ii), (g)(2), (g)(3), and (g)(5) of this section cannot be applied in a manner that would require the reopening of settled cost reports, except those cost reports on which there is a jurisdictionally proper appeal pending on direct GME or IME payments as of March 23, 2010.

(h) Effective for cost reporting periods beginning on or after January 1, 1983, the time spent by a resident in an approved medical residency program on vacation, sick leave, or other approved leave that does not prolong the total

time the resident is participating in the approved program beyond the normal duration of the program is countable. This provision cannot be applied in a manner that would require the reopening of settled cost reports, except those cost reports on which there is a jurisdictionally proper appeal pending on direct GME or IME payments as of March 23, 2010.

■ 15. Section 413.79 is amended by—
■ a. Revising paragraph (c)(1)(ii).
■ b. Revising the introductory text of paragraph (c)(2).
■ c. Revising paragraph (c)(2)(iv).
■ d. Revising the heading of paragraph (c)(3).
■ e. Revising the heading of paragraph (c)(4).
■ f. Revising the heading of paragraph (c)(5).
■ g. Revising paragraph (d)(6).
■ i. Adding a new paragraph (m).
■ j. Adding a new paragraph (n).
■ k. Adding a new paragraph (o).

The revisions and additions read as follows:

§ 413.79 Direct GME payments: Determination of the weighted number of FTE residents.

* * * * *

(c) * * *

(1) * * *

(ii)(A) For purposes of paragraph (c)(3) of this section, *reference resident level* refers to a hospital's resident level in the applicable reference period specified under paragraph (c)(3) of this section.

(B) For purposes of paragraph (m) of this section, *reference resident level* means with respect to a hospital, the highest resident level for any of the three most recent cost reporting periods ending before March 23, 2010, for which a cost report has been either settled or submitted (subject to audit) to the Medicare contractor by March 23, 2010.

* * * * *

(2) *Determination of the FTE resident cap.* Subject to the provisions of paragraphs (c)(3) through (c)(6) and (m) through (o) of this section and § 413.81, for purposes of determining direct GME payment—

* * * * *

(iv) Hospitals that are part of the same Medicare GME affiliated group or the same emergency Medicare GME affiliated group (as described under § 413.75(b)) may elect to apply the limit on an aggregate basis as described under paragraph (f) of this section.

* * * * *

(3) *Determination of the reduction to the FTE resident cap due to unused FTE resident slots under section 422 of Public Law 108–173.* * * *

(4) *Determination of an increase in the otherwise applicable resident cap under section 422 of Public Law 108–173.* * * *

(5) *Special rules for hospitals that participate in demonstration projects or voluntary resident reduction plans for purposes of section 422 of Public Law 108–173.* * * *

(d) * * *

(6)(i) Subject to the provisions of paragraph (h) of this section, FTE residents who are displaced by the closure of either another hospital or another hospital's program are added to the FTE count after applying the averaging rules in this paragraph (d), for the receiving hospital for the duration of the time that the displaced residents are training at the receiving hospital.

(ii) If a hospital receives a permanent increase in its FTE resident cap under paragraph (o)(1) of this section due to redistribution of slots from a closed hospital, the displaced FTE residents that the hospital receives are added to the FTE count after applying the averaging rules only in the first cost reporting period in which the receiving hospital trains the displaced FTE residents. In subsequent cost reporting periods, the displaced FTE residents are included in the receiving hospital's rolling average calculation.

* * * * *

(m) *Determination of the reduction to the FTE resident cap due to unused FTE resident slots under section 5503 of Public Law 111–148.* If a hospital's reference resident level, as defined under paragraph (c)(1)(ii)(B) of this section is less than its otherwise applicable FTE resident cap as determined under paragraph (c)(2) of this section or paragraph (e) of this section in the reference cost reporting period (as described under paragraph (m)(6) of this section), for portions of cost reporting periods beginning on or after July 1, 2011, the hospital's otherwise applicable FTE resident cap is reduced by 65 percent of the difference between the otherwise applicable FTE resident cap and the reference resident level. The reduction shall take into account the hospital's FTE resident cap as reduced under paragraph (c)(3) of this section. Under this provision—

(1) *Exemption for certain rural hospitals.* A rural hospital, as defined at subpart D of Part 412 of this subchapter, with fewer than 250 beds (as determined at § 412.105(b)) in its most recent cost reporting period ending on or before March 23, 2010, for which a cost report has been either settled or submitted (subject to audit) to the Medicare contractor by March 23, 2010, is exempt from any reduction to its otherwise applicable FTE resident cap under paragraph (m) of this section.

(2) *Exemption for certain hospitals that participate in demonstration projects or voluntary residency reduction plans.* A hospital that was participating in a demonstration project under section 402 of Public Law 90–248 or the voluntary reduction plan under § 413.88, is exempt from any reduction to its otherwise applicable FTE resident cap under paragraph (m) of this section if, by January 21, 2011, it submits a plan to CMS for filling all of its unused FTE resident slots by not later than March 23, 2012.

(3) *Exemption for a hospital described at section 1886(h)(4)(H)(v) of the Act.* A hospital described at section 1886(h)(4)(H)(v) of the Act, is exempt from any reduction to its otherwise applicable FTE resident cap under paragraph (m) of this section.

(4) *Exemptions for certain other hospitals.* A hospital training at or above its otherwise applicable FTE resident cap as determined under paragraph (c)(2) of this section for all three most recent cost reporting periods ending prior to March 23, 2010, for which a cost report has been either settled or submitted (subject to audit) to the Medicare contractor by March 23, 2010, is exempt from any reduction to its otherwise applicable FTE resident cap under paragraph (m) of this section.

(5) *New teaching hospital.* A new teaching hospital that does not have an otherwise applicable FTE resident cap as determined under paragraph (e)(1) of this section for all three most recent cost reporting periods ending prior to March 23, 2010, for which a cost report has been either settled or submitted (subject to audit) to the Medicare contractor by March 23, 2010, is exempt from any reduction to its otherwise applicable FTE resident cap under paragraph (m) of this section.

(6) *Reference cost reporting period.* (i) To determine a hospital's reference resident level, CMS determines, for a hospital's three most recent cost reporting periods ending before March 23, 2010, for which a cost report has been either settled or submitted (subject to audit) to the Medicare contractor by March 23, 2010, the cost reporting period with the highest resident level.

(ii) If the cost report that is used to determine a hospital's otherwise applicable FTE resident cap in the reference period is not equal to 12 months, the Medicare contractor may make appropriate modifications to apply the provisions of paragraph (m) of this section based on the equivalent of a 12-month cost reporting period.

(7) *Affiliated cap.* If a hospital is a member of a Medicare GME affiliated group during its reference cost reporting period, and its reference resident level is less than its otherwise applicable FTE resident cap as adjusted by the terms of the Medicare GME affiliation agreement, the hospital's FTE resident cap will be reduced by 65 percent of the difference between the otherwise applicable FTE resident cap and the reference resident level. The reduction will take into account the hospital's FTE resident cap as reduced under the provisions of paragraph (c)(3) of this section.

(n) *Determination of an increase in the otherwise applicable resident cap under section 5503 of Public Law 111–148.* (1) For portions of cost reporting periods beginning on or after July 1, 2011, a hospital may receive an increase in its otherwise applicable FTE resident cap (as determined by CMS) of not more than 75 additional FTEs if the hospital meets the requirements and qualifying criteria of section 1886(h)(8) of the Act and implementing instructions issued by CMS and if the hospital submits an application to CMS within the timeframe specified by CMS.

(2) A hospital that receives an increase in the otherwise applicable FTE resident cap under paragraph (n)(1) of this section must ensure, during the 5-year period beginning on July 1, 2011 and ending on June 30, 2016, that—

(i) The number of FTE primary care residents, as defined in § 413.75(b), excluding any additional positions under this paragraph, is not less than the average number of FTE primary care residents (as so determined) during the three most recent cost reporting periods ending prior to March 23, 2010 (and submitted to the Medicare contractor by March 23, 2010); and not less than 75 percent of the positions attributable to such increase are in a primary care or general surgery residency programs.

(ii) CMS may determine whether a hospital has met the requirements under paragraph (n)(1) of this section during the 5-year period of July 1, 2011 through June 30, 2016, in such manner and at such time as CMS determines appropriate, including at the end of such 5-year period.

(iii) In a case where the Medicare contractor determines that a hospital did not meet the requirements in a cost reporting period within the 5-year time period, the Medicare contractor will reduce the otherwise applicable FTE resident cap of the hospital by the amount by which such limit was increased under paragraph (n)(1) of this section from the earliest cost reporting period that is reopenable in which it would be determined that the hospital did not meet the requirements.

(o) *Determination of an increase in the FTE resident cap due to slots redistributed from a closed hospital.* (1) Except in the case of the closure of the hospital with Medicare Provider Number 05–0578, in the instance of a hospital closure, as defined at paragraph (h)(1)(i) of this section, the FTE resident cap of the closed hospital would be redistributed, and a hospital that meets the requirements and qualifying criteria of section 1886(h)(4)(H)(vi) of the Act and implementing instructions issued by CMS, including submission of a timely application to CMS, may receive an increase in its FTE resident cap, as determined by CMS.

(2)(i) Except in the case of the closure of the hospital with Medicare Provider Number 05–0578, in redistributing the FTE resident cap of a closed hospital, consideration shall be given to ensure that there is no duplication of FTE slots between FTE slots redistributed under this paragraph and temporary adjustments to FTE resident caps provider under paragraph (h)(2) of this section.

(ii) The provisions of this paragraph (o) will not be applied in a manner that will require the reopening of settled cost reports, except where the provider has a jurisdictionally proper appeal pending on direct GME or IME payments as of March 23, 2010.

PART 416—AMBULATORY SURGICAL SERVICES

■ 16. The authority citation for part 416 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

■ 17. Section 416.160 is amended by—
■ a. Revising paragraph (a)(1).
■ b. Revising paragraph (a)(4).
■ c. Adding a new paragraph (a)(5).

The revisions and addition read as follows:

§ 416.160 Basis and scope.

(a) * * *

(1) Section 1833(i)(2)(D) of the Act requires the Secretary to implement a revised payment system for payment of surgical services furnished in ASCs. The statute requires that, in the year such system is implemented, the system shall be designed to result in the same amount of aggregate expenditures for such services as would be made if there was no requirement for a revised payment system. The revised payment system shall be implemented no earlier than January 1, 2006, and no later than January 1, 2008. The statute also requires that, for CY 2011 and each subsequent year, any annual update to the ASC payment system be reduced by a productivity adjustment. There shall be no administrative or judicial review under section 1869 of the Act, section 1878 of the Act, or otherwise of the classification system, the relative weights, payment amounts, and the geographic adjustment factor, if any, of the revised payment system.

* * * * *

(4) Section 1834(d) of the Act specifies that, when screening colonoscopies or screening flexible sigmoidoscopies are performed in an ASC or hospital outpatient department, payment shall be based on the lesser of the amount under the fee schedule that would apply to such services if they were performed in a hospital outpatient department in an area or the amount under the fee schedule that would apply to such services if they were performed in an ambulatory surgical center in the same area. Section 1834(d) of the Act also specifies that, in the case of screening flexible sigmoidoscopy and screening colonoscopy services, the payment amounts must not exceed the payment rates established for the related diagnostic services.

(5) Section 1833(a)(1) of the Act requires 100 percent payment for preventive services described in section 1861(ww)(2) of the Act (excluding electrocardiograms) to which the United States Preventive Services Task Force (USPSTF) has given a grade of A or B for any indication or population. Section 1833(b)(1) of the Act also specifies that the Part B deductible shall not apply with respect to preventive services described in section 1861(ww)(2) of the Act (excluding electrocardiograms) to which the USPSTF has given a grade of A or B for any indication or population.

* * * * *

■ 18. Section 416.171 is amended by adding a new paragraph (a)(2)(iii) to read as follows:

§ 416.171 Determination of payment rates for ASC services.

(a) * * *

(2) * * *

(iii) *Productivity adjustment.* (A) For calendar year 2011 and subsequent years, the Consumer Price Index for All Urban Consumers determined under paragraph (a)(2)(ii) of this section is reduced by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act.

(B) The application of the provisions of paragraph (a)(2)(iii)(A) of this section may result in the update being less than

0.0 for a year, and may result in payment rates for a year being less than the payment rates for the preceding year.

* * * * *

PART 419—PROSPECTIVE PAYMENT SYSTEM FOR HOSPITAL OUTPATIENT DEPARTMENT SERVICES

■ 19. The authority citation for part 419 continues to read as follows:

Authority: Secs. 1102, 1833(t), and 1871 of the Social Security Act (42 U.S.C. 1302, 1395(t), and 1395hh).

■ 20. Section 419.21 is amended by revising paragraph (e) to read as follows:

§ 419.21 Hospital outpatient services subject to the outpatient prospective payment system.

* * * * *

(e)(1) Effective January 1, 2005 through December 31, 2008, an initial preventive physical examination, as defined in § 410.16 of this chapter, if the examination is performed no later than 6 months after the individual's initial Part B coverage date that begins on or after January 1, 2005.

(2) Effective January 1, 2009, an initial preventive physical examination, as defined in § 410.16 of this chapter, if the examination is performed no later than 12 months after the date of the individual's initial enrollment in Part B.

■ 21. Section 419.22 is amended by—

■ a. Revising paragraph (m).

■ b. Adding a new paragraph (t).

The revision and addition read as follows:

§ 419.22 Hospital outpatient services excluded from payment under the hospital outpatient prospective payment system.

* * * * *

(m)(1) Services provided on or before December 31, 2010, for patients with ESRD that are paid under the ESRD composite rate and drugs and supplies furnished during dialysis but not included in the composite rate.

(2) Renal dialysis services provided on or after January 1, 2011, for patients with ESRD that are paid under the ESRD benefit, as described in Subpart H of Part 413 of this chapter.

* * * * *

(t) Effective January 1, 2011, annual wellness visit providing personalized prevention plan services as defined in § 410.15 of this chapter.

■ 22. Section 419.32 is amended by revising paragraph (b)(1)(iv) to read as follows:

§ 419.32 Calculation of prospective payment rates for hospital outpatient services.

* * * * *

(b) * * *

(1) * * *

(iv)(A) For calendar year 2003 and subsequent years, by the hospital inpatient market basket percentage increase applicable under section 1886(b)(3)(B)(iii) of the Act.

(B) The percentage increase determined under paragraph (b)(1)(iv)(A) of this section is reduced by the following for the specific calendar year:

(*1*) For calendar year 2010, 0.25 percentage point; and

(*2*) For calendar year 2011, 0.25 percentage point.

* * * * *

■ 23. Section 419.43 is amended by revising paragraph (c) to read as follows:

§ 419.43 Adjustments to national program payment and beneficiary copayment amounts.

* * * * *

(c) *Wage index factor.*—(1) CMS uses the hospital inpatient prospective payment system wage index established in accordance with Part 412 of this chapter to make the adjustment specified under paragraph (a) of this section.

(2) For services furnished beginning January 1, 2011, the wage index factor provided for in paragraph (c)(1) of this section applicable to any hospital outpatient department that is located in a frontier State, as defined in § 412.64(m) of this chapter, may not be less than 1.00.

(3) The additional payments made under the provisions of paragraph (c)(2) of this section are not implemented in a budget neutral manner.

* * * * *

■ 24. Section 419.70 is amended by—

■ a. Revising paragraph (d)(2) introductory text.

■ b. Adding a new paragraph (d)(6).

The revision and addition read as follows.

§ 419.70 Transitional adjustments to limit decline in payments.

* * * * *

(d) * * *

(2) *Temporary treatment for small rural hospitals on or after January 1, 2006.* For covered hospital outpatient services furnished in a calendar year from January 1, 2006, through December 31, 2010, for which the prospective payment system amount is less than the pre-BBA amount, the amount of payment under this part is increased by 95 percent of that difference for services furnished during 2006, 90 percent of that difference for services furnished during 2007, and 85 percent of that difference for services furnished during 2008, 2009, and 2010, if the hospital—

* * * * *

(6) *Temporary treatment for sole community hospitals on or after January 1, 2010, and through December 31, 2010.* For covered hospital outpatient services furnished on or after January 1, 2010 through December 31, 2010, for which the prospective payment system amount is less than the pre-BBA amount, the amount of payment under this part is increased by 85 percent of that difference if the hospital is a sole community hospital as defined in § 412.92 of this chapter or is an essential access community hospital as described under § 412.109 of this chapter.

* * * * *

PART 489—PROVIDER AGREEMENTS AND SUPPLIER APPROVAL

■ 25. The authority citation for part 489 continues to read as follows:

Authority: Secs. 1102, 1819, 1820(e), 1861, 1864(m), 1866, 1869, and 1871 of the Social Security Act (42 U.S.C. 1302, 1395i–3, 1395x, 1395aa(m), 1395cc, 1395ff, and 1395hh).

■ 26. Section 489.20 is amended by revising paragraph (w) to read as follows:

§ 489.20 Basic commitments.

* * * * *

(w)(1) In the case of a hospital as defined in § 489.24(b), to furnish written notice to all patients at the beginning of their hospital stay or outpatient visit if a doctor of medicine or a doctor of osteopathy is not present in the hospital 24 hours per day, 7 days per week, in order to assist the patients in making informed decisions regarding their care, in accordance with § 482.13(b)(2) of this subchapter. The notice must indicate how the hospital will meet the medical needs of any patient who develops an emergency medical condition, as defined in § 489.24(b), at a time when there is no physician present in the hospital. For purposes of this paragraph, the hospital stay or outpatient visit begins with the provision of a package of information regarding scheduled preadmission testing and registration for a planned hospital admission for inpatient care or outpatient service.

(2) Before admitting a patient or providing an outpatient service, the hospital must receive a signed acknowledgment from the patient stating that the patient understands that a physician may not be present during

all hours services are furnished to the patient.

24136	Remove radius bone lesion		T	0050	32.2439	$2,220.83	.	$444.17
24138	Remove elbow bone lesion		T	0050	32.2439	$2,220.83	.	$444.17
24140	Partial removal of arm bone		T	0050	32.2439	$2,220.83	.	$444.17
24145	Partial removal of radius		T	0050	32.2439	$2,220.83	.	$444.17
24147	Partial removal of elbow		T	0050	32.2439	$2,220.83	.	$444.17
24149	Radical resection of elbow		T	0050	32.2439	$2,220.83	.	$444.17
24150	Resect distal humerus tumor		T	0051	47.3213	$3,259.30	.	$651.86
24152	Resect radius tumor		T	0051	47.3213	$3,259.30	.	$651.86
24155	Removal of elbow joint		T	0051	47.3213	$3,259.30	.	$651.86
24160	Remove elbow joint implant		T	0050	32.2439	$2,220.83	.	$444.17
24164	Remove radius head implant		T	0050	32.2439	$2,220.83	.	$444.17
24200	Removal of arm foreign body		T	0019	5.0887	$350.49	.	$70.10
24201	Removal of arm foreign body		T	0021	18.0784	$1,245.17	.	$249.04
24220	Injection for elbow x-ray		N					
24300	Manipulate elbow w/anesth		T	0045	15.5512	$1,071.10	$268.44	$214.22
24301	Muscle/tendon transfer		T	0050	32.2439	$2,220.83	.	$444.17
24305	Arm tendon lengthening		T	0050	32.2439	$2,220.83	.	$444.17
24310	Revision of arm tendon		T	0049	22.9744	$1,582.38	.	$316.48
24320	Repair of arm tendon		T	0051	47.3213	$3,259.30	.	$651.86
24330	Revision of arm muscles		T	0052	88.9869	$6,129.06	.	$1,225.82
24331	Revision of arm muscles		T	0051	47.3213	$3,259.30	.	$651.86
24332	Tenolysis triceps		T	0049	22.9744	$1,582.38	.	$316.48
24340	Repair of biceps tendon		T	0051	47.3213	$3,259.30	.	$651.86
24341	Repair arm tendon/muscle		T	0051	47.3213	$3,259.30	.	$651.86
24342	Repair of ruptured tendon		T	0051	47.3213	$3,259.30	.	$651.86
24343	Repr elbow lat ligmnt w/tiss		T	0050	32.2439	$2,220.83	.	$444.17
24344	Reconstruct elbow lat ligmnt		T	0052	88.9869	$6,129.06	.	$1,225.82
24345	Repr elbw med ligmnt w/tissu		T	0050	32.2439	$2,220.83	.	$444.17
24346	Reconstruct elbow med ligmnt	CH	T	0052	88.9869	$6,129.06	.	$1,225.82
24357	Repair elbow perc		T	0050	32.2439	$2,220.83	.	$444.17
24358	Repair elbow w/deb open		T	0050	32.2439	$2,220.83	.	$444.17
24359	Repair elbow deb/attch open		T	0050	32.2439	$2,220.83	.	$444.17
24360	Reconstruct elbow joint		T	0047	39.2855	$2,705.83	.	$541.17
24361	Reconstruct elbow joint		T	0425	124.8075	$8,596.24	.	$1,719.25
24362	Reconstruct elbow joint		T	0048	59.9568	$4,129.58	.	$825.92
24363	Replace elbow joint		T	0425	124.8075	$8,596.24	.	$1,719.25
24365	Reconstruct head of radius		T	0047	39.2855	$2,705.83	.	$541.17
24366	Reconstruct head of radius		T	0425	124.8075	$8,596.24	.	$1,719.25
24400	Revision of humerus	CH	T	0052	88.9869	$6,129.06	.	$1,225.82

ADDENDUM B.—OPPS PAYMENT BY HCPCS CODE FOR CY 2011

HCPCS Code	Short Descriptor	CI	SI	APC	Relative Weight	Payment Rate	National Unadjusted Copayment	Minimum Unadjusted Copayment

ADDENDUM D1.—FINAL OPPS PAYMENT STATUS INDICATORS FOR CY 2011

Indicator	Item/Code/Service	OPPS Payment Status
A	Services furnished to a hospital outpatient that are paid under a fee schedule or payment system other than OPPS, for example: • Ambulance Services • Clinical Diagnostic Laboratory Services • Non-Implantable Prosthetic and Orthotic Devices • EPO for ESRD Patients • Physical, Occupational, and Speech Therapy • Routine Dialysis Services for ESRD Patients Provided in a Certified Dialysis Unit of a Hospital • Diagnostic Mammography • Screening Mammography	Not paid under OPPS. Paid by fiscal intermediaries/MACs under a fee schedule or payment system other than OPPS. Not subject to deductible or coinsurance. Not subject to deductible or coinsurance.
B	Codes that are not recognized by OPPS when submitted on an outpatient hospital Part B bill type (12x and 13x).	Not paid under OPPS. • May be paid by fiscal intermediaries/MACs when submitted on a different bill type, for example, 75x (CORF), but not paid under OPPS. • An alternate code that is recognized by OPPS when submitted on an outpatient hospital Part B bill type (12x and 13x) may be available.
C	Inpatient Procedures	Not paid under OPPS. Admit patient. Bill as inpatient.

ADDENDUM D1.—FINAL OPPS PAYMENT STATUS INDICATORS FOR CY 2011		
Indicator	**Item/Code/Service**	**OPPS Payment Status**
D	Discontinued Codes	Not paid under OPPS or any other Medicare payment system.
E	Items, Codes, and Services: • That are not covered by any Medicare outpatient benefit based on statutory exclusion. • That are not covered by any Medicare outpatient benefit for reasons other than statutory exclusion. • That are not recognized by Medicare for outpatient claims but for which an alternate code for the same item or service may be available. • For which separate payment is not provided on outpatient claims.	Not paid by Medicare when submitted on outpatient claims (any outpatient bill type).
F	Corneal Tissue Acquisition; Certain CRNA Services and Hepatitis B Vaccines	Not paid under OPPS. Paid at reasonable cost.
G	Pass-Through Drugs and Biologicals	Paid under OPPS; separate APC payment.
H	Pass-Through Device Categories	Separate cost-based pass-through payment; not subject to copayment.
K	Nonpass-Through Drugs and Nonimplantable Biologicals, Including Therapeutic Radiopharmaceuticals	Paid under OPPS; separate APC payment.
L	Influenza Vaccine; Pneumococcal Pneumonia Vaccine	Not paid under OPPS. Paid at reasonable cost; not subject to deductible or coinsurance.
M	Items and Services Not Billable to the Fiscal Intermediary/MAC	Not paid under OPPS.
N	Items and Services Packaged into APC Rates	Paid under OPPS; payment is packaged into payment for other services. Therefore, there is no separate APC payment.
P	Partial Hospitalization	Paid under OPPS; per diem APC payment.

ADDENDUM D1.—FINAL OPPS PAYMENT STATUS INDICATORS FOR CY 2011		
Indicator	**Item/Code/Service**	**OPPS Payment Status**
Q1	STVX-Packaged Codes	Paid under OPPS; Addendum B displays APC assignments when services are separately payable. (1) Packaged APC payment if billed on the same date of service as a HCPCS code assigned status indicator "S," "T," "V," or "X." (2) In all other circumstances, payment is made through a separate APC payment.
Q2	T-Packaged Codes	Paid under OPPS; Addendum B displays APC assignments when services are separately payable. (1) Packaged APC payment if billed on the same date of service as a HCPCS code assigned status indicator "T." (2) In all other circumstances, payment is made through a separate APC payment.
Q3	Codes That May Be Paid Through a Composite APC	Paid under OPPS; Addendum B displays APC assignments when services are separately payable. Addendum M displays composite APC assignments when codes are paid through a composite APC. (1) Composite APC payment based on OPPS composite-specific payment criteria. Payment is packaged into a single payment for specific combinations of service. (2) In all other circumstances, payment is made through a separate APC payment or packaged into payment for other services.
R	Blood and Blood Products	Paid under OPPS; separate APC payment.
S	Significant Procedure, Not Discounted When Multiple	Paid under OPPS; separate APC payment.
T	Significant Procedure, Multiple Reduction Applies	Paid under OPPS; separate APC payment.

ADDENDUM D1.—FINAL OPPS PAYMENT STATUS INDICATORS FOR CY 2011		
Indicator	**Item/Code/Service**	**OPPS Payment Status**
U	Brachytherapy Sources	Paid under OPPS; separate APC payment.
V	Clinic or Emergency Department Visit	Paid under OPPS; separate APC payment.
X	Ancillary Services	Paid under OPPS; separate APC payment.
Y	Non-Implantable Durable Medical Equipment	Not paid under OPPS. All institutional providers other than home health agencies bill to DMERC.

ADDENDUM DD1.—FINAL ASC PAYMENT INDICATORS FOR CY 2011	
Indicator	**Payment Indicator Definition**
A2	Surgical procedure on ASC list in CY 2007; payment based on OPPS relative payment weight.
D5	Deleted/discontinued code; no payment made.
F4	Corneal tissue acquisition, hepatitis B vaccine; paid at reasonable cost.
G2	Non office-based surgical procedure added in CY 2008 or later; payment based on OPPS relative payment weight.
H2	Brachytherapy source paid separately when provided integral to a surgical procedure on ASC list; payment based on OPPS rate.
H8	Device-intensive procedure on ASC list in CY 2007; paid at adjusted rate.
J7	OPPS pass-through device paid separately when provided integral to a surgical procedure on ASC list; payment contractor-priced.
J8	Device-intensive procedure added to ASC list in CY 2008 or later; paid at adjusted rate.
K2	Drugs and biologicals paid separately when provided integral to a surgical procedure on ASC list; payment based on OPPS rate.
K7	Unclassified drugs and biologicals; payment contractor-priced.
L1	Influenza vaccine; pneumococcal vaccine. Packaged item/service; no separate payment made.
L6	New Technology Intraocular Lens (NTIOL); special payment.
N1	Packaged service/item; no separate payment made.
P2	Office-based surgical procedure added to ASC list in CY 2008 or later with MPFS nonfacility PE RVUs; payment based on OPPS relative payment weight.
P3	Office-based surgical procedure added to ASC list in CY 2008 or later with MPFS nonfacility PE RVUs; payment based on MPFS nonfacility PE RVUs.
R2	Office-based surgical procedure added to ASC list in CY 2008 or later without MPFS nonfacility PE RVUs; payment based on OPPS relative payment weight.

ADDENDUM DD1.—FINAL ASC PAYMENT INDICATORS FOR CY 2011	
Indicator	**Payment Indicator Definition**
Z2	Radiology service paid separately when provided integral to a surgical procedure on ASC list; payment based on OPPS relative payment weight.
Z3	Radiology service paid separately when provided integral to a surgical procedure on ASC list; payment based on MPFS nonfacility PE RVUs.

ADDENDUM D2.—FINAL OPPS COMMENT INDICATORS FOR CY 2011	
Comment Indicator	**Descriptor**
NI	New code for the next calendar year or existing code with substantial revision to its code descriptor in the next calendar year as compared to current calendar year, interim APC assignment; comments will be accepted on the interim APC assignment for the new code.
CH	Active HCPCS code in current year and next calendar year, status indicator and/or APC assignment has changed; or active HCPCS code that will be discontinued at the end of the current calendar year.

ADDENDUM DD2.—FINAL ASC COMMENT INDICATORS FOR CY 2011	
CI	**Comment Indicator Meanings**
CH	Active HCPCS code in current year and next calendar year, payment indicator assignment has changed; or active HCPCS code that is newly recognized as payable in ASC; or active HCPCS code that is discontinued at the end of the current calendar year.
NI	New code, interim payment indicator assignment; comments will be accepted on the interim payment assignment for the new code.

ADDENDUM E.—HCPCS CODES THAT ARE PAID AS INPATIENT PROCEDURES FOR CY 2011			
HCPCS Code	**Short Descriptor**	**SI**	**CI**
00176	Anesth pharyngeal surgery	C	
00192	Anesth facial bone surgery	C	
00211	Anesth cran surg hemotoma	C	
00214	Anesth skull drainage	C	
00215	Anesth skull repair/fract	C	
00452	Anesth surgery of shoulder	C	
00474	Anesth surgery of rib(s)	C	
00524	Anesth chest drainage	C	
00540	Anesth chest surgery	C	
00542	Anesth release of lung	C	
00546	Anesth lung chest wall surg	C	
00560	Anesth heart surg w/o pump	C	
00561	Anesth heart surg < 1 yr	C	
00562	Anesth hrt surg w/pmp age 1+	C	
00567	Anesth cabg w/pump	C
