The proposed research would allow the applicant to monitor the take of green, loggerhead, hawksbill, leatherback, Kemp's ridley, olive ridley, and unidentified hardshell sea turtles by observed commercial fisheries and

collect data to estimate bycatch and its effects on sea turtle sub-populations. Annually, up to 94 green, 731 loggerhead, 163 Kemp's ridley, 76 hawksbill, 255 leatherback, and 120 olive ridley/unknown hardshell sea turtles would be handled, identified, photographed, measured, weighed, flipper and passive integrated transponder tagged, temporarily marked, skin biopsied, and released. The permit would authorize SEFSC certified observers to collect data on juvenile, sub-adult, and adult sea turtles incidentally captured in commercial fisheries in the Gulf of Mexico and the East coast of the United States. These efforts would aid in the development and refinement of management efforts to recover these species. The sampling would be conducted year-round for five years from the date of issuance of the permit.
