

Average Burden per Response: 0.5 hours.

Annual Burden Hours: 13,475.

Needs and Uses: This information collection requires contractors to report IR&D projects generating annual costs in excess of \$50,000. The information will provide in-process information from DoD-sponsored IR&D projects to increase the effectiveness by providing visibility into the technical content of industry IR&D activities to meet DoD needs. Without the collection of this information, DoD will be unable to maximize the value of the IR&D funds that it disburses without infringing on the independence of a contractor to choose which technologies to pursue in its independent research and development program.

Affected Public: Businesses or other for-profit and not-for-profit institutions.

Frequency: On occasion.

Written comments and recommendations on the proposed information collection should be sent to Ms. Jasmeet Seehra at the Office of Management and Budget, Desk Officer for DoD, Room 10236, New Executive Office Building, Washington, DC 20503, or e-mail

Jasmeet K. Seehra@omb.eop.gov, with a copy to the Defense Acquisition Regulations System, *Attn:* Mr. Mark Goemrsall, OUSD (AT&L) DPAP (DARS), Room 3B855, 3060 Defense Pentagon, Washington, DC 20301-3060. Comments can be received from 30 to 60 days after the date of this notice, but comments to OMB will be most useful if received by OMB within 30 days after the date of this notice.

To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to the Defense Acquisition Regulations System, *Attn:* Mr. Mark Gomersall, OUSD (AT&L) DPAP (DARS), Room 3B855, 3060 Defense Pentagon, Washington, DC 20301-3060, or e-mail *dfars@osd.mil*. Include DFARS Case 2010-D011 in the subject line of the message.

List of Subjects in 48 CFR Part 231

Government procurement.

Ynette R. Shelkin,

Editor, Defense Acquisition Regulations System.

Therefore, 48 CFR part 231 is proposed to be amended as follows:

PART 231—CONTRACT COST PRINCIPLES AND PROCEDURES

1. The authority citation for 48 CFR part 231 continues to read as follows:

Authority: 41 U.S.C. 1303 and 48 CFR chapter 1.

2. Amend section 231.205-18 by adding paragraph (c)(iii)(C) and revising the introductory text of paragraph (c)(iv) to read as follows:

231.205-18 Independent research and development and bid and proposal costs.

* * * * *

(c) * * *
(iii) * * *

(C) For a contractor's annual IR&D costs in excess of \$50,000 to be allowable, the IR&D projects generating the costs must be reported to the Defense Technical Information Center (DTIC) using the DTIC's on-line input form and instructions. The inputs must be updated at least annually and when the project is completed. Copies of the input and updates must be made available for review by the cognizant administrative contracting officer (ACO) and the cognizant Defense Contract Audit Agency auditor to support the allowability of the costs.

(iv) For major contractors, the cognizant ACO or corporate ACO shall—

[Docket No. NHTSA-2011-0027]

RIN 2127-AK52

Federal Motor Vehicle Safety Standards; Power-Operated Window, Partition, and Roof Panel Systems

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

ACTION: Withdrawal of notice of proposed rulemaking.

SUMMARY: This document withdraws a notice of proposed rulemaking issued pursuant to the Cameron Gulbransen Kids Transportation Safety Act of 2007. The Act directed NHTSA to initiate a rulemaking to consider requirements for automatic reversal systems (ARS) for power windows and to make a final decision. The agency has decided not to issue a final rule adopting any such new requirements and instead to terminate rulemaking.

DATES: Effective March 2, 2011, the proposed rule published September 1, 2009, at 74 FR 45143 is withdrawn.

FOR FURTHER INFORMATION CONTACT: For non-legal issues, you may call Michael Pyne, NHTSA Office of Avoidance Standards, telephone 202-366-1810. For legal issues, you may call J. Edward Glancy, NHTSA Office of Chief Counsel, telephone 202-366-2992. You may send mail to these officials at the National Highway Traffic Safety Administration, 1200 New Jersey Avenue, SE., West Building, Washington, DC 20590.

SUPPLEMENTARY INFORMATION: For the reasons set forth below, we have decided not to issue a final rule adopting any new requirements for automatic reversal systems (ARS) and are withdrawing our 2009 proposal regarding ARS. This document explains our decision.

The Cameron Gulbransen Kids Transportation Safety Act of 2007 (K. T. Safety Act) directed the Secretary of Transportation to initiate a rulemaking to consider requiring all power windows and panels on light motor vehicles to stop closing and reverse direction automatically when they detect an obstruction, to prevent children and others from being trapped, injured, or killed. It also provided the Secretary with discretion whether to issue a final rule. It stated that if the Secretary determines that additional safety requirements are reasonable, practicable and appropriate, the Secretary shall issue those requirements. Alternatively, it stated if the Secretary determines that no additional safety requirements meet those criteria, the Secretary shall report to Congress on the reasons for not issuing such requirements.

In response to the K. T. Safety Act, the Department's National Highway Traffic Safety Administration (NHTSA) published in the **Federal Register** (74 FR 45143; September 1, 2009) a notice of proposed rulemaking (NPRM) proposing new requirements for ARS. The proposal discussed the agency's analysis of the injuries and fatalities related to power windows and the performance requirements that the agency had recently adopted for safer power window switches. The benefits of the safer switches rules will be increasingly realized as vehicles with "safer switches" replace older vehicles lacking them.

After the agency analyzed and considered the benefits and costs of installing ARS for all types of vehicle windows in developing the NPRM, NHTSA decided to propose requiring ARS on only one type of power

window, i.e., “express-up” or “one-touch closing” power windows. These windows close without continuous actuation of the window switch by a person. NHTSA also sought comments on requiring ARS for other power windows, and explained that the agency could include such a requirement in a final rule at the end of this rulemaking proceeding. The agency provided estimates of the costs and benefits of the proposal and a number of other regulatory alternatives. NHTSA also announced that it would begin providing consumers with information regarding which vehicles are equipped with ARS at <http://www.safercar.gov> by October 2009.

In response to its proposal, NHTSA received comments from vehicle manufacturer associations, suppliers, safety advocacy organizations, members of Congress and individuals. Vehicle manufacturers supported the proposal. In contrast, several safety advocacy organizations, several suppliers, and a number of individuals urged that the agency require ARS for all power windows. The members of Congress said that they believed that the agency’s proposal would not sufficiently achieve the Congressional intent of protecting children and asked the agency to review and take fully into account additional data submitted by commenters about the frequency of injuries and deaths involving power windows.

Before reaching a final decision, we carefully considered all of the public comments. Among other things, we considered data from a survey conducted for and submitted by a safety organization relating to the incidence of minor injuries. We also considered cost estimates provided by a supplier. In the NPRM, we noted that because the agency’s estimates of less severe injuries were primarily based on emergency room data, those estimates likely represented a floor rather than a ceiling. The survey data indicate that there are a substantial number of minor injuries, although the survey does not allow us to estimate the number of minor injuries on an annual basis.

We attempted to calculate the number of each type of injury based on information from multiple sources, including mortality data, hospital emergency department records, the agency’s Special Crash Investigations program, and survey information submitted during the comment period. For the purpose of making these calculations, we grouped power window injuries into two main categories.

First, there are a very small number of critical and fatal power window injuries

resulting from an occupant’s (usually a young child) being strangled or having his or her chest compressed when trapped by a closing power window. Most of these critical and fatal injuries have occurred in older vehicles with unsafe switches. They happened as a result of an occupant’s kneeling or leaning on a window switch in a vehicle with unprotected window switches, causing inadvertent window closings. This category of injuries has been addressed by our rules requiring safer switches. New vehicles with safety switches are steadily replacing the older vehicles without such switches, thus also steadily eliminating this category of injuries.

Second, there is a much larger number of less serious, mostly minor, injuries, most often resulting from a power window’s closing on a person’s finger or hand. In these cases, the window is intentionally activated (presumably by the driver). The most common injuries involve the pinching of fingers.

Given our present understanding of the data about the nature, source, and number of power window injuries, we believe that there are very few fatalities or serious injuries that any additional requirements for ARS could mitigate or prevent. They would instead address primarily “finger-pinch” type injuries.

There is considerable uncertainty about benefits estimates, particularly with respect to preventing or mitigating the less serious, mostly minor, injuries involving a power window closing on a person’s finger or hand. The agency has no data to indicate just how effective ARS is in reducing finger-pinch type injuries, because the number of finger-pinch type injuries is not collected in any data source. While the available information suggests that there may be a relatively large number of these injuries, we do not know how many occur annually; the survey results do not include or enable us to make a reliable estimate. The only information we have about the severity of those injuries is that in a survey respondent population of 1,001 people, 3 out of 33 people injured sometime in their lifetime indicated that they had sought medical attention for a power window related injury, indicating that this was a very minor injury for most. The company that conducted the survey did not ask those respondents about the nature of their injury, the type or model year of vehicle and the type of power window involved, or the seating position they were occupying at the time of their injury. Thus, we do not have clear information about the severity or source of these injuries.

Further, there is substantial uncertainty as to the proper way of valuing them for purposes of analyzing benefits and costs. For the NPRM, we did not have a method for valuing the cost of minor, non-crash injuries and so instead assumed values based on the comprehensive costs for persons who are injured in crashes (\$16,799 for person whose maximum injury level was a minor injury). However, this approach had the effect of overstating the value because the costs associated with a person who experiences a minor “finger-pinch” type injury are not comparable to the costs associated with a person who is injured in a crash. In the latter situation, the person’s entire body is typically exposed to crash forces, and the average person experiencing minor injuries in a crash has more than one such injury. The agency still does not have a generally accepted method for valuing the much lower cost of these more minor, non-crash injuries.

We also considered the possibility of people being entrapped without being injured. While entrapment without an injury is theoretically possible, e.g., in situations of partial window enclosure, we are not aware of any evidence that this is an actual problem.

In reaching a final decision regarding this rulemaking, we considered the statutory provision providing that the Department is to issue a final rule in this area only if it determines that additional safety standards are reasonable, practicable, and appropriate.

After considering the comments and available data, we have determined for the reasons stated above that there is not sufficient information to make a determination at this time that a requirement for ARS for power windows that do not already have this feature would, or would not, be reasonable, practicable and appropriate. Such a rule would be costly, but we cannot determine with any certainty whether the costs would be reasonable given the potential benefits. Those benefits would almost wholly consist of an uncertain number of minor injuries.

We also considered an alternative approach of requiring automakers to continue their currently voluntary practice of providing ARS for “express-up” or “one-touch closing” power windows and to specifying an ARS test requirement. The alternative we proposed included an ARS test requirement based on a United Nations Economic Commission for Europe (ECE) regulation (R21). We believe that this alternative, if implemented, would result in minimal benefits and nearly no costs because vehicle manufacturers are

already voluntarily equipping their “express-up” or “one-touch closing” power windows with ARS that are either ECE compliant or nearly ECE compliant.

We have also considered further whether safety would be materially improved by adopting the proposed alternative that requires ARS for express-up windows. Thus far, manufacturers have been voluntarily providing ARS for all express up windows. There is no reason at present to believe that vehicle manufacturers will discontinue this current practice. Moreover, the benefits of specifying the ECE R21 test requirement would be minimal. Given these considerations, adopting the proposed rule would not, at present, advance the child safety goal of the K. T. Safety Act. We do not read the statutory language to require issuance of such a rule, and we have accordingly decided not to issue a rule in this proceeding.

We plan to monitor power window designs on new vehicles and data relevant to power window injuries. If a new entrant in the U.S. market began importing vehicles with express up windows lacking ARS or if a manufacturer discontinued its current voluntary practice of providing ARS, we would reexamine our options.

The K. T. Safety Act specifies that if the Department does not issue a rule requiring ARS for power windows, it must make available to the public through the Internet and other means information indicating which vehicles with power windows and/or panels are or are not equipped with ARS. The Department has been or will be using several methods to provide this information since October 2009. We have been using our Five-Star safety rating program at <http://www.safercar.gov> to indicate whether particular make-models have ARS. To improve this program and help ensure that vehicles that are listed have effective ARS, we plan to list vehicles as having ARS only if they have ECE compliant ARS (as determined in a test procedure that in the near future we will place in Docket number NHTSA—2006–2655—accessible at <http://www.regulations.gov>) or the slightly more stringent ARS test requirement that we developed for power windows systems that operate when the key is not in the ignition.

We are also including general information about power window safety in our “Buying a Safer Car for Child Passengers” brochure and at our new

Web site “Keeping Kids Safe: Inside and Out”.¹

Based on the foregoing discussion, we are withdrawing our 2009 notice of proposed rulemaking published at 74 FR 45143 on September 1, 2009, and terminating rulemaking.

Authority: 49 U.S.C. 322, 30111, 30115, 30117, and 30166; delegation of authority at 49 CFR 1.50 and 501.8.

Issued on: February 25, 2011.

Joseph S. Carra,

Acting Associate Administrator for Rulemaking.

RIN 2127–AK43

Public Workshop and Hearing for Rear Visibility; Federal Motor Vehicle Safety Standard, Rearview Mirrors, Federal Motor Vehicle Safety Standard, Low-Speed Vehicles; Phase-in Reporting Requirements

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

ACTION: Notice of proposed rulemaking: Announcement of a public technical workshop, a public hearing and re-opening of public comment period.

SUMMARY: On December 7, 2010, NHTSA published a notice of proposed rulemaking proposing to amend the agency’s Federal motor vehicle safety standard on rearview mirrors to improve the ability of a driver of a vehicle to detect pedestrians in the area immediately behind the vehicle and thereby minimize the likelihood of the vehicle striking a pedestrian while the vehicle is moving backward. NHTSA is announcing two separate public events relating to this proposal. The first event, a public technical workshop, will be held on March 11, 2011, to discuss technical issues relevant to the test procedure described in the proposed rule. The second event, a public hearing, will be held on March 23, 2011 to provide an opportunity for the public to present oral testimony regarding the proposal. The dates, times, locations, and framework for these public events

¹ <http://www.nhtsa.gov/Driving+Safety/Child+Safety/Keeping+Kids+Safe:+Inside+&+Out>.

are announced in this notice. In order to facilitate the submission of written comments in connection with these two events, the comment period for the proposed rule will be reopened for a period of 45 days. In a separate document appearing in today’s edition of the **Federal Register**, the agency is correcting various minor errors regarding metric conversions, section cross references and other matters.

DATES: *Workshop:* NHTSA will hold the public technical workshop on March 11, 2011, beginning at 9 a.m. and continuing until 12 p.m., local time, at the location indicated in the **ADDRESSES** section below.

Public hearing: The public hearing will be held on March 23, 2011, beginning at 9 a.m. and continuing until 3 p.m. at the location indicated in the **ADDRESSES** section below. If you would like to present oral testimony at either of these public events, please contact the person identified under **FOR FURTHER INFORMATION CONTACT**, at least 5 days before the meeting.

Comments: The comment period for the proposed rule published December 7, 2010, at 75 FR 76186 is reopened. Comments will be accepted until April 18, 2011.

ADDRESSES: The March 11 public technical workshop will be held at the National Highway Traffic Safety Administration Vehicle and Research Test Center, 10820 State Route 347—Bldg. 60, East Liberty, Ohio 43319.

The March 23 public hearing will be held in the media center at the Department of Transportation West Building, 1200 New Jersey Ave., SE., Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT: If you would like to present oral testimony at either of these public events, please contact Mr. Markus Price at DOT by the date specified under **DATES**, at: Office of Crash Avoidance, Visibility and Injury Prevention Division, NHTSA, 1200 New Jersey Ave., SE., Washington, DC 20590; *telephone number:* (202) 366–0098; *fax number:* (202) 493–2990; *e-mail address:* markus.price@dot.gov (preferred method of registration).

Please provide the following information: The event at which you would like to speak; the time you wish to speak (morning or afternoon) at the hearing; your name and affiliation and the number of the individuals from your affiliation who are planning to attend; your address, e-mail address, telephone and fax numbers; and any accommodations you may need, such as a sign language interpreter.

SUPPLEMENTARY INFORMATION: The proposed rule would expand the
