The applicant is authorized to conduct a five-year scientific study determining biological and life history information on shortnose sturgeon in Connecticut waters, including the Connecticut, Thames, and Housatonic Rivers. Each fish will be captured, weighed, measured, passive integrated transponder tagged, and sampled for genetic tissue analysis. Of those 500 fish, 225 will also have a fin ray clipped for ageing analysis, and 100 will undergo gastric lavage. A sub-set of 25 fish will be acoustic tagged internally, released, and tracked, to determine seasonal movement and habitat selection.
