SUPPLEMENTARY INFORMATION:

Background

Recovery of endangered or threatened animals and plants to the point where they are again secure, self-sustaining members of their ecosystems is a primary goal of our endangered species program and the Act (16 U.S.C. 1531 *et seq.*). Recovery means improvement of the status of listed species to the point at which listing is no longer appropriate under the criteria set out in section 4(a)(1) of the Act. The Act requires the development of recovery plans for listed species, unless such a plan would not promote the conservation of a particular species.

Species' History

We listed the Mexican spotted owl as a threatened species under the Act on March 16, 1993 (58 FR 14248). We designated critical habitat on August 31, 2004 (69 FR 53182).

We originally completed and announced a recovery plan for the Mexican spotted owl on October 16, 1995. However, updates on status information and experience in implementing the original recovery plan led to our determination that revision is warranted.

The Mexican spotted owl species nests and roosts in forested areas exhibiting multilayered, uneven-aged tree structure, and in steep, rocky canyonlands. Forested habitats used by the owl vary throughout its range and by activity (nesting, roosting, foraging, dispersal/migration). However, the forest types believed most important to Mexican spotted owls are mixed conifer, pine-oak, and riparian habitats.

Threats to the owl's population in the United States have transitioned from commercial-based timber harvest at the time of listing, to the risk of stand-replacing wildfire. The revised recovery plan recommends protection of currently occupied home ranges, plus development of replacement nesting/roosting habitat over time. The plan recognizes the need to manage these forest landscapes to minimize the effects of large, stand-replacing wildfires, believed to be the greatest current threat to the species.

Recovery Plan Goals

The objective of an agency recovery plan is to provide a framework for the recovery of a species so that protection under the Act is no longer necessary. A recovery plan includes scientific information about the species and provides criteria and actions necessary for us to be able to reclassify the species to threatened status or remove it from the Federal List of Endangered and
