SUPPLEMENTARY INFORMATION: The NRC has used risk-informed insights as a part of its regulatory decision-making since the 1990s. In 2002, the National Fire Protection Association (NFPA) issued the first edition of NFPA 805, “Performance-Based Standard for Fire Protection for Light-Water Reactor Electric Generating Plants.” In July 2004, NRC amended its fire protection requirements in Title 10 of the *Code of Federal Regulations* (10 CFR) 50.48 to permit existing reactor licensees to voluntarily adopt fire protection requirements contained in NFPA 805 as an alternative to the existing deterministic requirements. One important element in a performance-based analysis is the estimation of the consequences of fire. Fire modeling is one possible approach to determine the impact of postulated fire scenarios in nuclear power plants.

NUREG-1934 (EPRI 1023259) “Nuclear Power Plant Fire Modeling Application Guide (NPP FIRE MAG)” was written as a collaborative effort by NRC's Office of Nuclear Regulatory Research (RES) and the Electric Power Research Institute (EPRI) as a part of the NRC/RES-EPRI Memorandum of Understanding to provide guidance on using fire modeling for nuclear power plant applications. This report will assist both the user performing the
