In this action the United States, on behalf of the U.S. Environmental Protection Agency ("EPA"), sought from the Illinois Central Railroad Company, (a) performance of the remedial design and the remedial action to address releases and threatened releases of hazardous substances at the Illinois Central Railroad Company (Johnston Yard) Superfund Alternative Site,

located in Memphis, Shelby County, Tennessee ("the Site"), and (b) reimbursement of costs incurred and to be incurred by the United States for response activities undertaken and to be undertaken at the Site. The major components of the remedy include extraction of diesel phase separated hydrocarbon from the groundwater, followed by enhanced bioremediation as necessary, monitoring, and institutional controls to limit Site uses until cleanup goals are reached.

#### SUPPLEMENTARY INFORMATION:

##### I. Introduction

Under section 101 of the Federal Mine Safety and Health Act of 1977, a mine operator may petition and the Secretary of Labor (Secretary) may modify the application of a mandatory safety standard to that mine if the Secretary determines that: (1) An alternative method exists that will guarantee no less protection for the miners affected than that provided by the standard; or (2) that the application of the standard will result in a diminution of safety to the affected miners.

MSHA bases the final decision on the petitioner's statements, any comments and information submitted by interested persons, and a field investigation of the conditions at the mine. In some instances, MSHA may approve a petition for modification on the condition that the mine operator complies with other requirements noted in the decision.
