Number of Respondents: 783,405 (37,060 net increase).

Average Hours per Response: Screener questionnaires, 5 minutes; angler questionnaires, 6 minutes for telephone survey, 10 minutes for mail survey.

Burden Hours: 53,494 hours (3,854 hours net increase).

Needs and Uses: This request is for a revision of a current information collection. Marine recreational anglers are surveyed for catch and effort data, fish biology data, and angler socioeconomic characteristics. These data are required to carry out provisions of the Magnuson-Stevens Fishery Conservation and Management Act (16 U.S.C. 1801 *et seq.*), as amended, regarding conservation and management of fishery resources.

Marine recreational fishing catch and effort data are currently collected through a combination of telephone surveys and on-site intercept surveys with recreational anglers. Recent amendments to the Magnuson-Stevens Fishery Conservation and Management Act (MSA) require the development of an improved data collection program for recreational fisheries. To meet the requirements of MSA, NOAA Fisheries is developing pilot studies to test alternative approaches for surveying recreational anglers. Studies will test

the effectiveness of alternative sample frames and data collection methods for contacting anglers and collecting recreational fishing data. The goal of these studies is to develop more efficient and accurate methods for estimating marine recreational fishing catch and effort.

Affected Public: Individuals or households.
