

Multispecies Fishery Management Plan (FW 47) and other issues. During its deliberations the Committee will consider the advice of the Groundfish Advisory Panel and the Recreational Advisory Panel. FW 47 will modify specifications for the fishery and consider changes to accountability measures, as well as adjust other measures. Changes to the specifications could include the adoption of sub-annual catch limits that limit the catches of Southern New England/Mid-Atlantic Bight (SNE/MAB) windowpane and/or SNE winter flounder by the scallop fishery, and SNE/MAB windowpane by other fisheries. The Committee will review draft FW 47 and may develop recommendations for preferred alternatives that will be presented to the Council. The Committee will review groundfish management priorities for 2012 and will develop a Committee recommendation on these priorities. The Committee will also consider information from a sector review workshop planned for October and may prioritize the issues identified at the workshop that need to be addressed to improve sector performance. Finally, the Committee will develop advice on any accountability measures that may be needed for the recreational fishery (indications are that an AM will be needed for Gulf of Maine haddock). Committee recommendations will be presented to the Council etc. Other business may be discussed.

Although non-emergency issues not contained in this agenda may come before these groups for discussion, those issues may not be the subject of formal action during these meetings. Action will be restricted to those issues specifically identified in this notice and any issues arising after publication of this notice that require emergency action under section 305(c) of the Magnuson-Stevens Fishery Conservation and Management Act, provided the public has been notified of the Council's intent to take final action to address the emergency.
