

(b) The condition and quantity of stored water will be confirmed by inspection on a monthly basis, and written instructions for conservation of water will be provided with the refuge supplies.

(7) For compressed oxygen, the petitioner proposes to supply only medical or airline quality oxygen in refuge areas. A supply of not less than 550 liters of oxygen per day per person for a minimum of 5 days will be provided.

(a) Oxygen cylinders will be stored in a safe manner and in compliance with 30 CFR 57.16005 and 57.16006, and away from flammable and combustible materials. A system of regulating the flow of oxygen and monitoring the reserve available will be provided with the refuge area supplies.

(b) Equipment designed for monitoring the oxygen and carbon dioxide level of the ambient air in the refuge area will be provided with the refuge area supplies.

(c) A purge valve will be installed or provided for rapid installation. The condition of the cylinders will be inspected and pressure tested on a monthly basis.

(d) Sufficient carbon dioxide absorbent material will be provided to maintain a carbon dioxide level below 2.0 percent for the duration and number of miners for which the refuge area is designed.

(e) Written instructions for monitoring and maintaining gas levels within the refuge area will be provided with the refuge supplies.

The petitioner asserts that implementation of the proposed modification will enhance the safety of the miners under emergency conditions and mitigate inherent safety issues with regard to the terms of the existing standard and the proposed alternative method will at all times guarantee no less than the same measure of protection afforded by the existing standard.

Docket Number: M-2011-009-M.

Petitioner: Celite Corporation, 2500 Miguelito Road, Lompoc, California 93436.

Mine: Lompoc Plant, MSHA I.D. No. 04-02848, located in Santa Barbara County, California.

Regulation Affected: 30 CFR 56.20001 (Intoxicating beverages and narcotics).

Modification Request: The petitioner requests a modification of the existing standard to permit alcohol slow-fermented from starch, bearing an alcohol content of less than 10 percent alcohol by volume, commonly called "beer", to be used at the Lompoc Plant for use in chemical testing that is part of product quality control and research.

The Lompoc Mine is a surface diatomaceous earth mine and processing facility. One of the commercial applications of the finished diatomaceous earth products is as a filtration agent utilized during the brewing process for beer. The finished diatomaceous earth products are integrated onto a fine mesh screen, with other ingredients, thereby creating a "filter-cake." At the end of the brewing process, following fermentation, which results in the creation of the alcohol-containing liquid that is called "beer," the beer is passed-through the filter-cake to remove undesirable contaminants. This results in higher clarity of the beer, which is commercially desirable.

Although diatomaceous earth can be an excellent filtration aid in the production of beer, it also contains naturally-occurring iron, which is undesirable in beer production. If the beer absorbs too much iron, the beer will develop a bitter taste, which is not commercially desirable. Soluble iron in beer also has a deleterious effect on beer stability, which is also not commercially desirable. Accordingly, one of the most critical properties of the diatomaceous earth products is its beer-soluble iron ("BSI") content.

To ensure that the diatomaceous earth products meet the BSI and other applicable specifications, Celite must engage in testing on-site at the Lompoc Plant to identify the BSI content of the diatomaceous earth products as they are processed. The petitioner proposes to:

(1) Store containers of beer at the Lompoc Plant in secure locations with restricted access;

(2) Use the beer for purposes of quality control testing, statistical method control testing, and research testing; and

(3) Store open containers of beer that may be used during more than one testing event at the Lompoc Plant in secure locations with restricted access.

The petitioner states that the consumption of any intoxicating beverages and narcotics (including beer) will be prohibited, and persons under the influence of alcohol or narcotics will not be permitted on site.

The petitioner asserts that modification of the standard will further the goals of the Mine Act by providing an equivalent level of protection for miners as is provided by the existing standard, and will allow Celite to maintain the commercial viability of the products that are mined at the Lompoc Plant.
