Additionally, International SEMATECH has begun to recruit and admit program members that only join certain discrete projects and thus only have access to information and intellectual property created under the discrete projects that these lower-tiered members join. Hence, International SEMATECH has four new classes of membership in addition to its traditional core membership: (1) Program—includes integrated circuit manufacturers, semiconductor design companies, and assembly and packaging companies that choose to pay for and receive information and other intellectual property developed in any of Sematech’s technical divisions; (2) Associate—includes companies that design, test, make, market, or support materials, equipment, processes, software, systems, or facilities for manufacturing semiconductors and that pay for and receive access to information and other intellectual property that arise under discrete Sematech-led projects; (3) Extreme Ultraviolet Lithography Mask Infrastructure (“EMI”)—includes among its members integrated circuit manufacturers and semiconductor mask makers; and (4) 3D Enablement Center—created to finance and conduct research related to three dimensional (3D) interconnect technologies, which the chip manufacturing and design industries perceive to be a means available to extend Moore’s law without the enormous expense associated with development of new lithographic technologies.

International SEMATECH created a new subsidiary called International Sematech Manufacturing Initiative, Inc. (“ISMI”), which is also a Delaware 501(c)(6) membership corporation organized to finance and conduct research and development related to solving semiconductor manufacturing problems. ISMI’s emphasis is on solving today’s semiconductor manufacturing challenges such as enhancing semiconductor manufacturing equipment productivity, contributing to increased automation in the operation of semiconductor fabrication facilities (“fabs”) and reducing fabs’ electricity

and water consumption. Sematech created the 450 LLC to finance and conduct research and development necessary to catalyze the introduction into the marketplace of semiconductor manufacturing equipment capable of handling silicon wafers with a diameter of 450mm. The purpose of the 450 LLC is to aggregate funds from integrated circuit manufacturers to finance and participate in this endeavor.
