^a The PSD and Part D programs in Indian country are included in the state program figures.

In addition, we estimate that the 112 state and local reviewing authorities will prepare and submit an average of 51 SIP revisions per year to conform to changes in the NSR regulations, for a total annual burden of 2,040 hours. Besides the burden hours tallied above for permitting and SIP revisions, we estimate that 34 of the sources subject to PSD permitting are required to conduct pre-construction monitoring which they outsource, representing start-up costs totaling \$12,444,204.

Respondents/Affected Entities: Industrial plants; state and local reviewing authorities.

Estimated Number of Respondents: 87,481, including 87,369 industry sources and 112 state and local reviewing authorities generating a total of 162,357 responses.

Estimated Total Annual Burden: 7,934,340 hours and \$12,444,204.

Are there changes in the estimates from the last approval?

Since the last renewal of this ICR (October 2008), the estimated number of responses has increased by 11,536 due primarily to the addition of the minor NSR program for Indian country which requires all existing minor sources to register within the first 3 years of the program. In addition, actions under the Act unrelated to NSR rule changes brought greenhouse gases into the prevention of significant deterioration (PSD) program, but the potentially overwhelming increase in permit actions that this might have caused was limited to a manageable level (fewer than 1,350 sources) by the Greenhouse Gas Tailoring Rule. Partially counteracting these increases, the Flexible Air Permitting Rule had the effect of reducing the number of respondents under the PSD, Part D, and minor NSR programs.

The burden per PSD permit has increased due to the addition of greenhouse gases to the program. In addition, provisions were added to the

PSD regulations that allow for full implementation of the program for particulate matter less than 2.5 micrograms (PM_{2.5}), which has resulted in an increase in the modeling required for PSD permits and, thus, an increase in the per-permit burden. The Flexible Air Permitting Rule marginally increased the per-permit burden for the PSD and Part D programs, although the overall effect of the rule was to reduce total burden because of the reduction in the number of permit actions. The Flexible Air Permitting Rule also slightly reduced the burden per minor NSR permit.

As a result of all these changes to the NSR program, the total burden for the program has increased by 1,983,272 hours.

What is the next step in the process for this ICR?

The EPA will consider the comments received and amend the ICR as appropriate. The final ICR package will then be submitted to OMB for review and approval pursuant to 5 CFR 1320.12. At that time, EPA will issue another **Federal Register** notice pursuant to 5 CFR 1320.5(a)(1)(iv) to announce the submission of the ICRs to OMB and the opportunity to submit additional comments to OMB. If you have any questions about this ICR or the approval process, please contact the technical person listed under **FOR FURTHER INFORMATION CONTACT**.
