

statistically analyzed the effect of these materials on head injuries due to upper-interior contact in cars and light trucks in the Crashworthiness Data System of the National Automotive Sampling System for 1995–2009 and the effect on head injuries in fatal crashes in the Fatality Analysis Reporting System—Multiple Cause of Death files for 1999–2007. FMVSS No. 201 without head-protection air bags reduces AIS 4-to-6 head injuries due to contact with upper-interior components by an estimated 24 percent (95% confidence bounds, 11 to 35%), based on the average of the analysis results for the two databases. That is equivalent to a 4.3-percent reduction of overall fatality risk (confidence bounds 2.0 to 6.2%). When all vehicles on the road meet FMVSS No. 201, it will save an estimated 1,087 to 1,329 lives per year. At a cost of \$25.52 (in 2010 dollars) over the life of a vehicle, that amounts to an annual cost, depending on new-vehicle sales, ranging from \$301 to \$424 million for certifying all new vehicles to FMVSS No. 201. It is a very cost-effective regulation, costing less than \$1 million per life saved.

NHTSA issued previous evaluation reports on FMVSS No. 201 in 2006 (72 FR 9074, Docket No. NHTSA–2007–27371, report available at <http://www-nrd.nhtsa.dot.gov/Pubs/810739.PDF>) and in 1988 (53 FR 2516, report available at <http://www-nrd.nhtsa.dot.gov/Pubs/807203.PDF>).
