

metropolitan statistical areas (MSAs) with high AIDS prevalence.

Internet-using MSM will be recruited through a direct marketing method that utilizes selective placement of banner advertisements on non-profit and privately owned Web sites. Individuals interested in learning more about the survey will click on the banner ad and will be directed to a one-minute screening interview to determine eligibility for participation in a behavioral assessment with an estimated duration of 14 minutes. The data from the assessment will provide

estimates of behavior related to the risk of HIV and other sexually transmitted diseases, history of HIV testing, and use of HIV prevention services. No other federal agency collects this type of information nationally from MSM. These data are expected to have substantial impact on prevention program development and monitoring at the local, state, and national levels.

CDC estimates that the proposed web-based behavioral assessment will involve, per year in the 56 U.S. jurisdictions and 21 oversampled MSAs, eligibility screening of 309,090 persons.

Of these, an estimated 139,090 either will not be interested in completing the behavioral assessment or will be ineligible after completing the screener and an estimated 170,000 eligible persons will participate in the behavioral assessment, resulting in a total of 510,000 eligible survey respondents and 417,270 ineligible screened persons during a 3-year period.

Participation of respondents is voluntary and there is no cost to the respondents other than their time. The total estimated annual burden hours are 44,819.

ESTIMATED ANNUALIZED BURDEN HOURS

Respondents	Form	No. of respondents	No. of responses per respondent	Average burden per response (in hours)
Persons screened for eligibility	Eligibility Screener	309,090	1	1/60
Eligible persons	Behavioral Assessment	170,000	1	14/60
