

proposed collection for public comment. Interested persons are invited to send comments regarding this burden estimate or any other aspect of this collection of information, including any of the following subjects: (1) The necessity and utility of the proposed information collection for the proper performance of the agency's functions; (2) the accuracy of the estimated burden; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

To obtain copies of the supporting statement and any related forms for the proposed paperwork collections referenced above, email your request, including your address, phone number, OMB number, and OS document identifier, to Sherrette.funncoleman@hhs.gov, or call the Reports Clearance Office on (202) 690-5683. Send written comments and recommendations for the proposed information collections within 30 days of this notice directly to the OS OMB Desk Officer; faxed to OMB at (202) 395-5806.

Proposed Project: Teen Pregnancy Prevention Replication Evaluation Study: Baseline Data Collection—OMB No. OS-0990-NEW—The Office of Adolescent Health.

Abstract

The Office of Adolescent Health (OAH), Office of the Assistant Secretary for Health (OASH), U.S. Department of Health and Human Services (HHS), is overseeing and coordinating adolescent pregnancy prevention evaluation efforts as part of the Teen Pregnancy Prevention Initiative. OAH is working collaboratively with the Office of the Assistant Secretary for Planning and Evaluation (ASPE), the Centers for Disease Control and Prevention (CDC), and the Administration for Children and Families (ACF) on adolescent pregnancy prevention evaluation activities.

OAH will jointly oversee with ASPE the Teen Pregnancy Prevention Replication Evaluation Study (TPP Replication Study). The TPP Replication Study will be a random assignment evaluation which will determine the extent to which evidence-based program models that have been shown to be effective in an earlier trial, demonstrate effects on adolescent sexual risk

behavior and teenage pregnancy when they are replicated in similar and in different settings and for different populations.

The findings from this evaluation will be of interest to the general public, to policy-makers, and to organizations interested in teen pregnancy prevention.

OAH and ASPE are proposing baseline data collection activity as part of the TPP Replication Evaluation. Respondents will be asked to answer carefully selected questions about demographics and risk and protective factors related to teen pregnancy. Information from this data collection will be used to perform meaningful analysis to determine significant program effects.

Respondents: The survey data will be collected through private, self-administered questionnaires completed by study participants, i.e. adolescents assigned to a select school or community teen pregnancy prevention program or a control group. Surveys will be distributed and collected by trained professional staff.

Estimated Annualized Burden Table

Reporting Burden on Study Participants

TEEN PREGNANCY PREVENTION REPLICATION EVALUATION STUDY

Instrument	Annual number of respondents	Number of responses per respondent	Average burden hours per response	Total annual burden hours
Baseline instrument	5,250	1	0.5	2,625

Agency Forms Undergoing Paperwork Reduction Act Review

The Centers for Disease Control and Prevention (CDC) publishes a list of information collection requests under review by the Office of Management and Budget (OMB) in compliance with the Paperwork Reduction Act (44 U.S.C. Chapter 35). To request a copy of these requests, call Daniel Holcomb, the CDC Reports Clearance Officer, at (404) 639-5960 or send an email to omb@cdc.gov.

Send written comments to CDC Desk Officer, Office of Management and Budget, Washington, DC 20503 or by fax to (202) 395-5806. Written comments should be received within 30 days of this notice.

Proposed Project

Fellowship Management System, OMB No. 0920-0765—Revision—Scientific Education and Professional Development Program Office (SEPDPO), Office of Surveillance, Epidemiology and Laboratory Services (OSELs), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

SEPDPO is requesting approval to revise and extend for three years; CDC's use of the online Fellowship Management System (FMS) to allow public health agencies and organizations to submit fellowship assignment proposals electronically, using FMS. The FMS system will continue to be used for its electronic

application and directory processes that allow individuals to apply to fellowships online, track applicant and alumni information.

The mission of SEPDPO is to provide leadership in public health training and education, and manage innovative, evidence-based programs to prepare the health workforce to meet public health challenges of the 21st century. Professionals in public health, epidemiology, medicine, economics, information science, veterinary medicine, nursing, public policy, and other related professions seek opportunities, through CDC fellowships, to broaden their knowledge, skills, and experience to improve the science and practice of public health. CDC fellows are assigned to state, tribal, local and territorial public health agencies; federal government agencies, including CDC, and HHS operational divisions, such as Indian Health Service; and to nongovernmental organizations, including academic institutions, tribal

organizations, and private public health organizations.

FMS provides an efficient and effective way for processing fellowship application data, selecting qualified candidates, maintaining a current alumni database, documenting the impact of the fellowships on alumni careers, and generating reports. This proposed revision will provide a secure site within this existing electronic system for designated employees of public health agencies and organizations to submit fellowship assignment proposals electronically.

Designated employees of public health agencies or organizations will answer a standardized set of core questions within FMS about the proposed assignments, including the

type of public health agency or organization submitting the proposal; proposed fellow activities, including training and opportunities for service and collaboration; and how the fellow will be supported, including the type and extent of mentorship and supervision the fellow will receive.

This revision enhances FMS to include a function that will result in a standardized process for submitting and reviewing host assignment proposals across fellowships. The electronic assignment proposal process that FMS provides optimizes the matching of qualified fellowship candidates with host sites and will result in an optimal fit between fellows and their assignments—ultimately leading to

long-term employment and sustained public health capacity of state and local health departments and other non-federal public health agencies and organizations.

The annual burden table has been updated to reflect the number of respondents from nonfederal public health agencies or organizations that submit assignment proposals to host fellows. Some alumni are deceased or cannot be located. Response burden assumes response from an individual responding alumnus, on average, every 3 years (which is likely an overestimate of frequency). There is no cost to respondents other than their time. The total estimated annual burden hours are 1201.

ESTIMATED ANNUALIZED BURDEN HOURS

Type of respondents	Number of respondents	Frequency of response	Average annualized burden per response (in hours)
Public Health Agency or Organization	226	1	1.5
Fellowship applicants	1122	1	40/60
Fellowship alumni	454	1	15/60

Dated: December 29, 2011.

Daniel Holcomb,

Reports Clearance Officer, Centers for Disease Control and Prevention.

Proposed Project

Evaluation of the National Tobacco Prevention and Control Public Education Campaign—New—National Center for Chronic Disease Prevention and Health Promotion (NCCDPHP), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

The Centers for Disease Control and Prevention (CDC) requests OMB approval to collect information needed for evaluating the CDC's National Tobacco Prevention and Control Public Education Campaign (The Campaign). This campaign, which is expected to launch in February/March 2012, is the first Federally-funded media campaign in the U.S. that describes the harms from smoking and will feature televised advertisements that will air nationally along with complementary ads on radio, the Internet, in print, and other forms of media.

CDC plans to conduct an initial baseline survey of adults before the launch of The Campaign and a longitudinal follow-up survey of those participants approximately three to four months later. Information will be collected about adult smokers' awareness of and exposure to campaign advertisements, and about their knowledge, attitudes, and beliefs related to smoking and secondhand smoke. In

addition, the survey will measure behaviors related to smoking cessation and behaviors related to interpersonal communication about smoking. Information will also be collected on demographic variables including age, sex, race, education, income, primary language, and marital status.

Data from this survey will be used to estimate the extent to which smokers and non-smokers in the U.S. were exposed to The Campaign and to examine the statistical relationships between adults' exposure to The Campaign and changes in outcome variables of interest including attempts to quit smoking.

Information will be collected through on-line questionnaires involving adult smokers and non-smokers in the U.S., ages 18-54. Respondents who are smokers will be recruited from two sources: a probability sample drawn from the Knowledge Networks KnowledgePanel®, a panel that uses address-based postal mail sampling to generate a probability-based online panel of U.S. adults, and a supplemental sample from SSI, a leading provider of online sampling in the U.S. Respondents who are non-smokers will be recruited from Knowledge Networks. The target number of complete pre-/post-campaign questionnaires for smokers is 5,000. The target number of
