

the bridge owner to make necessary repairs to the bridge. The bridge provides a vertical clearance of 5 feet above mean high water in the closed position and a horizontal clearance of 195 feet.

The normal operating schedule for the bridge is set forth in 33 CFR 117.325(b). 33 CFR 117.325(b) states that the draw is normally in the fully open position, displaying flashing green lights to indicate that vessels may pass. When a train approaches, large signs on both the upstream and downstream sides of the bridge flash "Bridge Coming Down," the lights go to flashing red, and siren signals sound. After an eight minute delay, the draw lowers and locks if there are no vessels under the draw. The draw remains down for a period of eight minutes or while the approach track circuit is occupied. After the train has cleared, the draw opens and the lights return to flashing green.

The deviation will be in effect from 8 a.m. on January 15, 2012 through 5 p.m. on March 29, 2012. As a result of this deviation, the Florida East Coast automated railroad bridge over the St. Johns River will remain closed to navigation from 8 a.m. until 11:30 a.m. and from 12:30 p.m. until 5 p.m. Sundays through Thursdays from 8 a.m. on January 15, 2012 through 5 p.m. on March 29, 2012. This deviation will affect all vessel traffic transiting under the bridge. Vessels may not pass underneath the bridge in closed position, and there are no alternate routes for vessel traffic. Due to the nature of the repair work, it would take a minimum of two hours to open in an emergency as the bridge would have to be rebalanced before it could open.

In accordance with 33 CFR 117.35(e), the drawbridge must return to its regular operating schedule immediately at the end of the designated time period. This deviation from the operating regulations is authorized under 33 CFR 117.35.

Dated: December 22, 2011.

W.D. Baumgartner,

Rear Admiral, U.S. Coast Guard, Commander, Seventh Coast Guard District.

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 117

[Docket No. USCG-2011-1139]

Drawbridge Operation Regulation; Corson Inlet, Stathmere, NJ

AGENCY: Coast Guard, DHS.

ACTION: Notice of temporary deviation from regulations.

SUMMARY: The Commander Fifth Coast Guard District has issued a temporary deviation from the regulations governing the operation of the Corson Inlet Bridge (County Route 619), across Corson Inlet, mile 0.9 in Strathmere, NJ. The deviation is necessary to facilitate the replacement of the steel railing. This deviation restricts operation of the draw span; no openings will be allowed during the course of the project, while the railings on the moveable span portion of the bridge are replaced.

DATES: This deviation is effective from 5 a.m. on January 15, 2012 until 5 p.m. on February 15, 2012.

ADDRESSES: Documents mentioned in this preamble as being available in the docket are part of docket USCG-2011-1139 and are available online by going to <http://www.regulations.gov>, inserting USCG-2011-1139 in the "Keyword" box and then clicking "Search". They are also available for inspection or copying at the Docket Management Facility (M-30), U.S. Department of Transportation, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email Terrance Knowles, Environmental Protection Specialist, Fifth Coast Guard District; telephone (757) 398-6587, email Terrance.A.Knowles@uscg.mil. If you have questions on viewing the docket, call Renee V. Wright, Program Manager, Docket Operations, telephone (202) 366-9826.

SUPPLEMENTARY INFORMATION: The Cape May County Bridge Commission, who owns and operates this bascule drawbridge, has requested a temporary deviation from the current operating

regulations set out in 33 CFR 117.714 to facilitate the replacement of the bridge railings.

Under the regular operating schedule, the bridge operates as follows: The draw shall open on signal; however, from October 1 through May 15 from 10 p.m. to 6 a.m. and from 6 a.m. to 10 p.m. on December 25 the draw need open only if at least two hours notice is provided.

The Corson Inlet Bridge (CR-619) at mile 0.9, across Corson Inlet in Strathmere, NJ has a vertical clearance in the closed position to vessels of 15 feet above mean high water (MHW).

Under this temporary deviation, the Corson Inlet Bridge will be closed to vessels requiring an opening, from 5 a.m. on January 15, 2012 to 5 p.m. on February 15, 2012. The drawbridge will not be able to open in the event of an emergency. Vessels that can pass under the bridge without a bridge opening may do so at all times. Vessels have an alternate ocean route to the south through Townsends Inlet.

Though the span will be closed for the project, the 15 feet of vertical navigation clearance will remain available throughout the project. Furthermore, the 50 feet of horizontal clearance will be reduced to 25 feet temporarily only if/when barges are used beneath the span to facilitate this project.

Historically, there were no vessel openings provided for the months of January through February in 2011. The Coast Guard has coordinated the restrictions with the Cape May County Bridge Commission/contractor and will inform the other users of the waterways through our Local and Broadcast Notices to Mariners of the closure periods for the bridge so that vessels can arrange their transits to minimize any impact caused by the temporary deviation.

In accordance with 33 CFR 117.35(e), the drawbridge must return to its regular operating schedule immediately at the end of the designated time period.

This deviation from the operating regulations is authorized under 33 CFR 117.35.

Dated: December 22, 2011.

Waverly W. Gregory, Jr.,

Bridge Program Manager, Fifth Coast Guard District.
