

“1 to 2 Golden Eagles over the 20 to 30 year life of the project.”

The applicant developed an eagle conservation plan, following recommendations provided by the Service (Draft Eagle Conservation Plan Guidance, January 2011, http://www.fws.gov/windenergy/docs/ECP_draft_guidance_2_10_final_clean_omb.pdf). As recommended in the Service's guidance, the applicant's plan outlines avoidance and minimization measures and potential advanced conservation practices, assesses risk from pre-construction monitoring data, makes commitments for mitigating eagle mortalities, and commits to post-construction monitoring. This plan was submitted as part of the permit application, and if we issue the permit following the National Environmental Policy Act (NEPA) process, then the conservation commitments would become conditions of the permit.

The Service independently evaluated the risk of eagle fatalities from the construction of this project and compared that risk to the conservation measures, largely mitigation actions, to which the applicant has committed. This is an essential step in the Service's evaluation of an application for a permit for programmatic take of eagles, since issuing criteria require permitted take to be in compliance with the BGEPA's preservation standard. The Service has interpreted this standard to require maintenance of stable or increasing breeding populations of eagles (74 FR 46836; September 11, 2009). The evaluation of risk and offsetting conservation measures, and the implications for direct, indirect, and cumulative effects under three alternatives, are discussed in detail in the DEA.

Next Steps

The public process for the proposed Federal permit action will be completed after the public comment period, at which time we will evaluate the permit application and comments submitted thereon to determine whether the application meets the permitting requirements under BGEPA, applicable regulations, and NEPA requirements. Upon completion of that evaluation, we will select our course of action.
