

system of posting debit transactions; adoption of a system that separates different types of debit transactions (e.g., ATM and point of sale debit, ACH, check, and various account fees) and applies different rules to order transactions in discrete buckets; and adoption of a system which orders debit transactions from smallest to highest dollar amount. The Bureau is interested in learning how these changes have affected consumers. Comments could include information regarding:

- a. The different ways in which institutions currently group and order different types of transactions;
- b. How institutions disclose the ways in which they currently group and order transactions;
- c. The consequences in practice of different grouping and ordering policies for the frequency with which consumers may incur overdrafts and related fees. Or the consequences for whether certain overdraft items will or will not be paid; or
- d. The impact of funds availability policies on when overdrafts are determined to have occurred.

10. In addition to transaction ordering policies, the Bureau is also aware that some institutions have adopted other new policies with respect to overdrafts. For example, some institutions have declined to permit consumers to opt in to overdraft coverage of electronic debits and instead reject those transactions or allow consumers to opt in at the point of the transaction. Other institutions have adopted cushions on the amount by which an account must be overdrawn to incur an overdraft fee; caps on the number of fees that may be incurred in a given day; tiered overdraft fees; a grace period to cover an overdraft item without incurring a fee; or a waiver of fees on a certain number of overdraft items per month. In what way do such changes—or other new policies with respect to overdraft—affect the incidence and/or severity of overdraft charges?

The Economics of Overdraft Programs

11. The Bureau is interested in the economics of overdraft programs, including their contribution to overall costs and revenues associated with checking accounts. There is concern based on the FDIC study's data from 2006 that many institutions are reliant on fees from a small group of frequent overdrafters for a disproportionate share of revenue from checking accounts, while many other accountholders benefit as "free riders."²⁷ The Bureau is

interested to learn the extent to which the FDIC study's findings from 2006 are representative of the market today. At the same time, the Bureau also seeks to learn what costs regulations affecting overdrafts might impose on institutions. Comments may address, among other things:

- a. How the distribution of overdraft revenue from consumers may have evolved since the FDIC study and the implementation of changes in Regulations DD and E;
- b. The distribution of overdraft fees by type of transaction (check, ACH, debit, ATM, etc.) today relative to what the FDIC found in its study;
- c. The extent to which different groups of consumers incur overdrafts and related fees disproportionately (for example, the FDIC study suggested that young adults and consumers with low or moderate incomes might incur overdrafts more frequently than other groups);
- d. The share of deposit service fees charged to consumer accounts that are attributable to overdrafts and NSF's today;
- e. The costs to institutions of administering overdraft programs; and
- f. The losses (e.g., charge-offs) that occur as a result of extending overdraft coverage.

Long-Term Impact on Consumers

12. The long term impact of overdraft programs on consumer behavior and options is of particular interest to the Bureau. Some have argued that overdraft programs allow consumers to meet liquidity challenges while others argue that overdraft eventually adds to liquidity issues because of the high recurring fees that frequent overdrafters must pay. Further, there is concern that heavy use may lead a significant percentage of users to damage their credit records in databases institutions use to qualify consumers for checking accounts and thereby to lose access to the services of competing providers or to the banking system altogether. To what extent are these various perspectives valid?

overdraft fees occur and the 23 percent of accounts with balances over \$3000 are responsible for the vast majority of bank revenue (the former based on overdraft fees and the latter based on interest earned on deposits) while the remaining 51 percent of accounts were unprofitable, earning less in fee income and interest than it cost the banks to service them.
