**SUPPLEMENTARY INFORMATION:**

**I. Introduction**

The NRC is issuing a revision to an existing guide in the NRC's "Regulatory Guide" series. This series was developed to describe and make available to the public information such as methods that are acceptable to the NRC staff for implementing specific parts of the agency's regulations, techniques that the staff uses in evaluating specific problems or postulated accidents, and data that the staff needs in its review of applications for permits and licenses.

This revision to Regulatory Guide 7.7 provides licensees and applicants with a method the NRC considers acceptable for meeting the administrative requirements for transporting licensed

material under 10 CFR part 71, "Packaging and Transportation of Radioactive Material" either in a Type B or a Type AF package and receipt, and for opening of the package under 10 CFR Part 20, "Standards for Protection Against Radiation." The NRC's administrative requirements for the shipment, receipt, and opening of a Type B package appear in Subpart J, "Precautionary Procedures" of 10 CFR part 20 and subpart G, "Operating Controls and Procedures," of 10 CFR part 71.

The staff developed and published this guidance to provide licensees with an acceptable method to satisfy the administrative requirements in 10 CFR part 20 and part 71 for transferring, shipping, and receiving radioactive material.

**II. Further Information**

Revision 1 of Regulatory Guide 7.7 was issued with a temporary identification as Draft Regulatory Guide, DG-7007. Draft Regulatory Guide, DG-7007, was published in the **Federal Register** on January 28, 2011 (76 FR 5215) for a 60 days public comment period. The public comment period closed on March 30, 2011. The NRC staff's responses to the public comments on DG-7007 are available under ADAMS Accession Number ML112160411.

Dated at Rockville, Maryland, this 19th day of March, 2011.

**SUPPLEMENTARY INFORMATION:**

**I. Introduction**

The NRC is issuing a revision to an existing guide in the NRC's "Regulatory Guide" series. This series was developed to describe and make available to the public information such as methods that are acceptable to the

NRC staff for implementing specific parts of the agency's regulations, techniques that the staff uses in evaluating specific problems or postulated accidents, and data that the staff needs in its review of applications for permits and licenses.

The recommendations in this guide describe actions that the staff of the NRC considers acceptable when the number of available electric power sources are less than the number of sources required by the limiting conditions for operation (LCOs) for a facility. This regulatory guide applies to single- and multiple-unit plants and is consistent with the improved standard technical specifications (iSTS) (NUREG-1430 through NUREG-1434). The LCO-required actions and specified completion times referred to in this guide are based on the completion times presented in Regulatory Guide 1.93, Revision 0, "Availability of Electric Power Sources," issued December 1974, which have been incorporated into the required actions in the iSTS.

The recommendations described in this guide are an approach that the NRC staff finds acceptable for satisfying some of the requirements of General design criterion (GDC) 17, "Electric Power Systems," of Appendix A, "General Design Criteria for Nuclear Power Plants," to 10 CFR part 50, "Domestic Licensing of Production and Utilization Facilities."

## II. Further Information

Revision 1 of RG 1.93 was issued with a temporary identification as Draft Regulatory Guide, DG-1244. The NRC staff's responses to the public comments on DG-1244 are available under ADAMS Accession Number ML090550693.
