SUPPLEMENTARY INFORMATION: On November 18, 2011 (76 FR 71474), HUD published a proposed rule to revise the regulations governing the IHBG and Title VI Loan Guarantee programs, codified in 24 CFR part 1000. HUD's proposed rule would implement statutory amendments to the Native American Housing Assistance and Self-Determination Act of 1996 (25 U.S.C. 4101 *et seq.*) (NAHASDA) enacted by the Native American Housing Assistance and Self-Determination Reauthorization Act of 2008 (Pub. L. 110-411, approved October 14, 2008). Specifically, HUD's proposed rule would amend subpart A of 24 CFR part 1000 regarding the guiding principles of NAHASDA, definitions, labor standards, environmental review procedures, procurement, tribal and Indian preference, and program income. Proposed changes to subpart B of 24 CFR part 1000 would address eligible families, useful life of properties, and criminal conviction records. Proposed changes to subpart C of 24 CFR part 1000 would address the tribal program year, Indian Housing Plan (IHP) requirements, administrative and planning expenses, reserve accounts, local cooperation agreements, and exemption from taxation. Proposed changes to subpart D of part 24 would address certain formula information that must be included in the IHP and Annual Performance Report (APR), as well as the date by which HUD must provide data used for the formula and projected allocation to a tribe or Tribally Designated Housing Entity. Proposed changes to subpart E of 24 CFR part 1000 would address financing guarantees. Finally, proposed changes to subpart F of 24 CFR part 1000 would address HUD monitoring, APRs, APR review, HUD performance measures, recipient comments on HUD reports, remedial actions in the event of substantial noncompliance, audits, submission of audit reports, and records

Federal Motor Vehicle Safety Standards; Seat Belt Assembly Anchorages; Incorporation by Reference

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This NPRM proposes to amend Federal Motor Vehicle Safety Standard No. 210, "Seat belt assembly anchorages," to specify a new force application device for use as a testing interface to transfer loads onto the seat belt anchorage system during

compliance tests of anchorage strength. The device represents a human torso and pelvis. The new device comes in two sizes, one representative of a mid-size adult male, and the other of a small occupant. We propose both sizes be used in FMVSS No. 210. We believe that the devices provide a consistent test configuration and load path to the seat belt assembly anchorages. We are proposing this amendment because the devices are significantly easier to use than the current body blocks.

I. FMVSS No. 210

FMVSS No. 210, "Seat belt assembly anchorages," applies to passenger cars, multipurpose passenger vehicles (MPVs), trucks, and buses. The standard establishes requirements for seat belt assembly anchorages to ensure the anchorages are properly located for effective occupant restraint and to reduce the likelihood of their failure. As to the latter, the standard requires seat belt anchorages to withstand specified forces to increase the likelihood that the belts will remain attached to the vehicle structure in a crash. Under the standard, seat belt anchorage assemblies for lap/shoulder belts must withstand a 13,345 Newton (N) (3,000 pounds (lb)) force applied to the lap belt portion of the seat belt assembly simultaneously with a 13,345 N force applied to the shoulder belt portion of the seat belt assembly. The anchorage assemblies must withstand the force as it is increased over thirty seconds, and withstand that force as it is held for 10 seconds.¹ These forces are applied to the shoulder portion of the belt (for a lap/shoulder belt) by an upper torso body block (Figure 3 in FMVSS No. 210) and the lap belt portion of the belt by a pelvic body block² (Figures 2A and 2B in

¹ For lap belt only anchorages, the seat belt anchorage must withstand force as it is increased to 22,241 N (5,000 pounds) over thirty seconds and withstand that force as it is held for 10 seconds.

² The particular pelvic body block used depends on the type of seat. Typically the body block in
