

l. *Description of Project:* The Hostetter Modernization Project would consist of: (1) A proposed powerhouse containing two micro-hydroelectric turbine/generator units utilizing existing water supply pipelines with an installed capacity of 150 kilowatts; and (2) appurtenant facilities. The entire project would be below grade within the existing Hostetter Turnout Facility. The applicant estimates that when completed, the proposed project would allow the excess head in the water supply pipelines to produce electricity, energy that would otherwise be lost, and would have an average annual generation of 240 megawatt-hours.
