

are also open to big game hunting, subject to State regulations and seasons.

The draft Plan and environmental assessment (EA) was made available to the public for review and comment following the announcement in the **Federal Register** on June 22, 2011 (76 FR 36571–36571). The public was given until July 25, 2011, to comment and a public meeting was held in Malta on June 29, 2011. More than 20 individuals and groups provided written comments and appropriate changes were made to the final plan. The draft CCP and final EA included the analyses of three different sets of alternatives including three alternatives for managing the refuge complex, two alternatives to evaluate the divestiture of Lake Thibadeau, and five alternatives for addressing the salinity and blowing salts issue on Bowdoin National Wildlife Refuge. The Region 6 Regional Director selected Alternative B for overall refuge management and the proposed divestiture of Lake Thibadeau and Alternative 4 for addressing the salinity and blowing salts issue. These preferred alternatives will serve as the final plan.

The final plan identifies goals, objectives, and strategies that describe the future management of the Bowdoin National Wildlife Refuge Complex. Alternative B for Lake Thibadeau National Wildlife Refuge recommends divestiture. The Service owns less than 1 percent of the lands within the 3,868-acre approved acquisition boundary; the remaining area is private lands encumbered by refuge and flowage easements. These easements give the Service the right to manage the impoundments and the uses that occur on that water and to control hunting and trapping, but these easements do not prohibit development, grazing, or agricultural uses. Due to upstream development in the watershed, the impoundments do not receive adequate water supplies and are often dry enough to be farmed; the surrounding upland areas are also farmed or heavily grazed.

This loss or lack of habitat has resulted in the Service's recommendation to divest this refuge. For the remaining refuge complex lands, Alternative B proposes to conserve natural resources by restoring, protecting, and enhancing native mixed-grass prairie and maintaining high-quality wetland habitat for target migratory and resident birds. Invasive and nonnative plants that are causing habitat losses and fragmentation would be controlled or eradicated, including Russian olive trees. Research would be conducted to control crested wheatgrass and restore treated areas. Enhanced

wetlands would be managed to mimic natural conditions for wetland-dependent migratory.

Visitor services programs would be enhanced, providing additional opportunities for staff- and volunteer-led. A sanctuary area would be created for waterfowl on the east side of the Bowdoin National Wildlife Refuge closing this area to all foot traffic during the hunting season. A new wildlife observation site would be added on the auto tour route. The Service would work with the State to determine the feasibility of offering a big game hunt at Bowdoin Refuge. The success of all of these additional efforts and programs would depend on added staff, research, and monitoring programs, including additional funding, infrastructure, and new and expanded partnerships.

Alternative 4 was chosen as the preferred alternative for addressing the salinity and blowing salts issue, improving plant and animal diversity. An underground injection well, possibly more than 6,000 feet, would be used to force saline water deep into the ground. An annual withdrawal of 800 acre-feet of water would be required to maintain the salt balance, assuming all water and salt inputs remained consistent with past inputs. Once the salinity objective of 7,000 mg/L was met and water in Lake Bowdoin met all applicable water quality standards, modifications to the lake's infrastructure would be evaluated to determine the best way to re-create a flow-through system that maximized the effects of natural flooding. If natural flooding did not occur or more water to be supplied from the Milk River was not granted, the injection well could be used periodically to maintain salinity at an acceptable level. It is estimated that it will take 10–20 years to achieve the salinity and water quality objectives. Throughout this process, the Service will also work with partners to determine how to best minimize salt inputs into the refuge.

The Service is furnishing this notice to advise other agencies and the public of the availability of the final Plan, to provide information on the desired conditions for the refuge complex and to detail how the Service will implement management strategies. Based on the review and evaluation of the information contained in the EA, the Regional Director has determined that implementation of the Final Plan does not constitute a major Federal action that would significantly affect the quality of the human environment within the meaning of section 102(2)(c) of the National Environmental Policy Act. Therefore, an Environmental Impact Statement will not be prepared.

Dated: December 23, 2011.

Noreen Walsh,

Deputy Regional Director.

Bureau of Indian Affairs

Land Acquisitions; Ione Band of Miwok Indians of California

AGENCY: Bureau of Indian Affairs, Interior.

ACTION: Notice of final agency determination.

SUMMARY: The Acting Assistant Secretary—Indian Affairs made a final agency determination to acquire 228.04 acres of land into trust for the Ione Band of Miwok Indians of California on May 24, 2012.

FOR FURTHER INFORMATION CONTACT: Paula L. Hart, Director, Office of Indian Gaming, Bureau of Indian Affairs, MS–3657 MIB, 1849 C Street NW., Washington, DC 20240; Telephone (202) 219–4066.

SUPPLEMENTARY INFORMATION: This notice is published in the exercise of authority delegated by the Secretary of the Interior to the Assistant Secretary—Indian Affairs by 209 Departmental Manual 8.1 and is published to comply with the requirements of 25 CFR 151.12(b) that notice be given to the public of the Secretary's decision to acquire land in trust at least 30 days prior to signatory acceptance of the land into trust. The purpose of the 30-day waiting period in 25 CFR 151.12(b) is to afford interested parties the opportunity to seek judicial review of final administrative decisions to take land in trust for Indian tribes and individual Indians before transfer of title to the property occurs. On May 24, 2012, the Acting Assistant Secretary—Indian Affairs decided to accept 228.04 acres of land into trust for the Ione Band of Miwok Indians of California under the authority of the Indian Reorganization Act of 1934, 25 U.S.C. 465.
