Authority

Scientific research permits are issued in accordance with section 10(a)(1)(A) of the ESA of 1973 (16 U.S.C. 1531-1543) and regulations governing listed fish and wildlife permits (50 CFR parts 222-226). Application Received

Permit 14513

Dr. Stephanie Carlson, University of California at Berkeley, is requesting a 5-year permit to take adult, smolt and juvenile CC Chinook salmon, CCC coho salmon, SONCC coho salmon, NC steelhead, and CCC steelhead (ESA-listed salmonids) associated with four research projects in three watersheds in California. In the four studies described below, researchers do not expect to kill any listed fish, but a small number may die as an unintended result of the research activities. However, a low number of moribund CCC steelhead may

be collected for analysis as part of Project 3, in Pescadero Lagoon. A notice of receipt for application 14513 was published in the **Federal Register** on December 8, 2010 (75 FR 76400). No comments were received for this application, however due to substantial changes to the sampling locations and the amount taken NMFS decided to publish the revised notice for public comment.

Project 1 is a study on the summer ecology of juvenile salmonids in streams of the Lagunitas Creek (Marin County), Pescadero Creek (San Mateo County), and the South Fork Eel River (Mendocino County) watersheds. The study will examine the variation in growth and survival of juvenile CCC coho salmon, SONCC coho salmon, CCC steelhead and NC steelhead rearing in streams that experience elevated water temperatures and low stream flow volumes in summer. Annually, Dr. Carlson proposes to capture (backpack electrofisher, seine, dip-net), handle (identify, measure and weigh), mark (fin-clip, passive integrated transponder (PIT) tag or elastomer tag), sample (gastric lavage, scale collection), and release juvenile fish. A small number of adults may be captured (backpack electrofisher, seine), handled (identify, measure, weigh), and released. Supplemental surveys will be accomplished by snorkeling. Movements of PIT-tagged fish will be monitored throughout the summer using hand held and stationary PIT-tag readers. In September and October, the study areas will be re-sampled using the same methods as described above. Fish will be scanned for PIT-tags and those recaptured will be re-weighed and measured to determine growth rates. Throughout winter, fish will be monitored for their movements using hand held and stationary PIT-tag readers. Data gathered from this study will provide information on fish growth and survival rates and how these relate to abiotic and biotic variables within the watersheds.

Project 2 is a biotelemetry study of smolt migrations in the Lagunitas Creek and Pescadero Creek watersheds. In the Lagunitas Creek watershed, CCC coho salmon and CCC steelhead smolts will be captured in down migrant traps operated by permitted researchers (the National Park Service and the Marin Municipal Water District). In the Pescadero Creek Watershed, Dr. Carlson proposes to utilize CCC steelhead smolts captured (trap) by other researchers (permits pending); however if trapping is not conducted by others, Dr. Carlson will utilize CCC steelhead smolts captured (seine) associated with Study
