

	Aggregate limitation	Per-issuer limitation
(1) General obligations	None	None.
(2) Other obligations of a governmental entity (e.g., revenue bonds) if the issuer has an adequate capacity to meet financial commitments under the security for the projected life of the asset or exposure. An issuer has an adequate capacity to meet financial commitments if the risk of default by the obligor is low and the full and timely repayment of principal and interest is expected.	None	10% of the institution's total capital.
(3) Obligations of a governmental entity that do not qualify under any other paragraph but are approved by the OCC.	As approved by the OCC	10% of the institution's total capital.

* * * * *

(d) For all securities, the institution must consider, as appropriate, the interest rate, credit, liquidity, price, transaction, and other risks associated with the investment activity and determine that such investment is appropriate for the institution. The institution must also determine that the obligor has adequate resources and willingness to provide for all required payments on its obligations in a timely manner.

■ 15. In § 160.93, revise paragraph (d)(5) introductory text and paragraph (d)(5)(i) to read as follows:

§ 160.93 Lending limitations.

* * * * *

(d) * * *

(5) Notwithstanding the limit set forth in paragraphs (c)(1) and (c)(2) of this section, a savings association may invest up to 10 percent of unimpaired capital and unimpaired surplus in the obligations of one issuer evidenced by:

(i) Commercial paper or corporate debt securities that are, as of the date of purchase, investment grade.

* * * * *

■ 16. In § 160.121, revise paragraphs (b)(1) and (2) to read as follows:

§ 160.121 Investments in state housing corporations.

* * * * *

(b) * * *

(1) The obligations are investment grade; or

(2) The obligations are approved by the OCC. The aggregate outstanding direct investment in obligations under paragraph (b) of this section shall not exceed the amount of the Federal savings association's total capital.

BILLING CODE 4810-33-P

DEPARTMENT OF THE TREASURY

Office of the Comptroller of the Currency

12 CFR Parts 1 and 160

[Docket ID OCC-2012-0006]

RIN 1557-AD36

Guidance on Due Diligence Requirements in Determining Whether Securities Are Eligible for Investment

AGENCY: Office of the Comptroller of the Currency, Treasury (OCC).

ACTION: Final guidance.

SUMMARY: On November 29, 2011, the Office of the Comptroller of the Currency (OCC) proposed guidance to assist national banks and Federal savings associations in meeting due diligence requirements in assessing credit risk for portfolio investments. Today, the OCC is issuing final guidance that clarifies regulatory expectations with respect to investment purchase decisions and ongoing portfolio due diligence processes.

DATES: This guidance is effective January 1, 2013.

FOR FURTHER INFORMATION CONTACT: Kerri Corn, Director for Market Risk, or Michael Drennan, Senior Advisor, Credit and Market Risk Division, (202) 874-4660; or Carl Kaminski, Senior Attorney, or Kevin Korzeniewski, Attorney, Legislative and Regulatory Activities Division, (202) 874-5090; or Eugene H. Cantor, Counsel, Securities and Corporate Practices Division, (202) 874-5202, Office of the Comptroller of the Currency, 250 E Street SW., Washington, DC 20219.

SUPPLEMENTARY INFORMATION: Section 939A of the Dodd-Frank Wall Street Reform and Consumer Protection Act¹ requires each Federal agency, within one year of enactment, to review: (1) Any regulations that require the use of an assessment of the creditworthiness of a security or money market instrument and (2) any references to or

¹ Public Law 111-203, 939A (July 21, 2010) (Dodd-Frank Act).

requirements in those regulations regarding credit ratings. Section 939A then requires the Federal agencies to modify the regulations identified during the review to substitute any references to or requirements of reliance on credit ratings with such standards of creditworthiness that each agency determines to be appropriate. The statute provides that the agencies shall seek to establish, to the extent feasible, uniform standards of creditworthiness, taking into account the entities the agencies regulate and the purposes for which those entities would rely on such standards.

On November 29, 2011 (76 FR 73777), the OCC issued proposed guidance together with a notice of proposed rulemaking (NPRM) to remove references to credit ratings in the OCC's non-capital regulations. In particular, the OCC proposed to amend the definition of "investment grade" in 12 CFR part 1 to no longer reference credit ratings. Instead, "investment grade" securities would be those where the issuer has an adequate capacity to meet the financial commitments under the security for the projected life of the investment. An issuer has an adequate capacity to meet financial commitments if the risk of default by the obligor is low and the full and timely repayment of principal and interest is expected. Generally, securities with good to very strong credit quality will meet this standard. National banks will have to meet this new standard before purchasing investment securities. In addition, national banks and Federal savings associations should continue to maintain appropriate ongoing reviews of their investment portfolios to verify that their portfolios meet safety and soundness requirements that are appropriate for the institution's risk profile and for the size and complexity of their portfolios.

The OCC received 11 comments on the proposed rules and guidance from banks, bank trade groups, individuals, and bank service providers. The majority of the commenters generally supported the proposed rules and stated that the proposal presented a workable alternative to the use of credit ratings.

A few commenters raised specific issues, which are addressed in more detail in the preamble to the final rules published in today's **Federal Register**.

Text of Final Supervisory Guidance

The text of the final supervisory guidance on due diligence that national banks and Federal savings associations should conduct in assessing credit risk for portfolio investments as required by 12 CFR part 1 and 12 CFR part 160 (specifically, 12 CFR 1.5 and 12 CFR 160.1(b) and 160.40(c)) follows:

Purpose

The OCC has issued final rules to revise the definition of "investment grade," as that term is used in 12 CFR parts 1 and 160 in order to comply with section 939A of the Dodd-Frank Act. Institutions have until January 1, 2013, to ensure that existing investments comply with the revised "investment grade" standard, as applicable based on investment type, and safety and soundness practices described in 12 CFR 1.5 and this guidance. This implementation period also will provide management with time to evaluate and amend existing policies and practices to ensure new purchases comply with the final rules and guidance. National banks and Federal savings associations that have established due diligence review processes as described in previous guidance, and that have not relied exclusively on external credit ratings, should not have difficulty establishing compliance with the new standard.

The OCC is issuing this guidance ("Guidance") to clarify steps national banks ordinarily are expected to take to demonstrate they have properly verified their investments meet the newly established credit quality standards under 12 CFR Part 1 and steps national banks and Federal savings associations are expected to take to demonstrate they are in compliance with due diligence requirements when purchasing investment securities and conducting ongoing reviews of their investment portfolios. Federal savings associations will need to follow FDIC requirements when that agency promulgates credit quality standards under 12 U.S.C. 1831e. The standards below describe how national banks may purchase, sell, deal in, underwrite, and hold securities consistent with the authority contained in 12 U.S.C. 24(Seventh), and how Federal saving associations may invest in, sell, or otherwise deal in securities consistent with the authority contained in 12 U.S.C. 1464(c). The activities of national banks and Federal savings associations also must be consistent with safe and sound banking practices,

and this Guidance reminds national banks and Federal savings associations of the supervisory risk management expectations associated with permissible investment portfolio holdings under Part 1 and Part 160.

Background

Parts 1 and 160 provide standards for determining whether securities have appropriate credit quality and marketability characteristics to be purchased and held by national banks or Federal savings associations. These requirements also establish limits on the amount of investment securities an institution may hold for its own account. As defined in 12 CFR Part 1, an "investment security" must be "investment grade." For the purpose of Part 1, "investment grade" securities are those where the issuer has an adequate capacity to meet the financial commitments under the security for the projected life of the investment. An issuer has an adequate capacity to meet financial commitments if the risk of default by the obligor is low and the full and timely repayment of principal and interest is expected. Generally, securities with good to very strong credit quality will meet this standard. In the case of a structured security (that is, a security that relies primarily on the cash flows and performance of underlying collateral for repayment, rather than the credit of the entity that is the issuer), the determination that full and timely repayment of principal and interest is expected may be influenced more by the quality of the underlying collateral, the cash flow rules, and the structure of the security itself than by the condition of the issuer.

National banks and Federal savings associations must be able to demonstrate that their investment securities meet applicable credit quality standards. This Guidance provides criteria that national banks can use in meeting Part 1 credit quality standards and that national banks and Federal savings associations can use in meeting due diligence requirements.

Determining Whether Securities Are Permissible Prior to Purchase

The OCC's elimination of references to credit ratings in its regulations, in accordance with the Dodd-Frank Act, does not substantively change the standards institutions should use when deciding whether securities are eligible for purchase under Part 1. The OCC's investment securities regulations generally require a national bank or Federal savings association to determine whether or not a security is "investment grade" in order to determine whether

purchasing the security is permissible. Investments are considered "investment grade" if they meet the regulatory standard for credit quality. To meet this standard, a national bank must be able to determine that the security has (1) low risk of default by the obligor, and (2) the full and timely repayment of principal and interest is expected over the expected life of the investment.² A Federal savings association must meet the same standard when purchasing certain municipal revenue bonds pursuant to 12 CFR 160.24 and must meet the standards in 12 U.S.C. 1831e when purchasing corporate debt securities.

For national banks, Type I securities, as defined in Part 1, generally are government obligations and are not subject to investment grade criteria for determining eligibility to purchase. Typical Type I obligations include U.S. Treasuries, agencies, municipal government general obligations, and for well-capitalized institutions, municipal revenue bonds. While Type I obligations do not have to meet the investment grade criteria to be eligible for purchase, all investment activities should comply with safe and sound banking practices as stated in 12 CFR 1.5 and in previous regulatory guidance. Under OCC rules, Treasury and agency obligations do not require individual credit analysis, but bank management should consider how those securities fit into the overall purpose, plans, and risk and concentration limitations of the investment policies established by the board of directors. Municipal bonds should be subject to an initial credit assessment and then ongoing review consistent with the risk characteristics of the bonds and the overall risk of the portfolio.

Financial institutions should be well acquainted with fundamental credit analysis as this is central to a well-managed loan portfolio. The foundation of a fundamental credit analysis—character, capacity, collateral, and covenants—applies to investment securities just as it does to the loan portfolio. Accordingly, the OCC expects national banks and Federal savings

² Federal savings associations may invest in and hold investment securities under section 5(c) of the Home Owners' Loan Act (HOLA), to the extent specified in regulations of the OCC. While OCC regulations imposing investment limitations generally apply to Federal savings associations, the Federal Deposit Insurance Act (FDIA), 12 U.S.C. 1831e(d)(1) also applies. Under this provision, savings associations currently are prohibited from investing in corporate debt securities unless they are rated "investment grade." However, the Dodd-Frank Act provides that on July 21, 2012, this statutory requirement will be replaced by standards of creditworthiness established by the FDIC. Pub. L. 111–203, Section 939(a)(2) (July 21, 2010).

associations to conduct an appropriate level of due diligence to understand the inherent risks and determine that a security is a permissible investment. The extent of the due diligence should be sufficient to support the institution's conclusion that a security meets the investment grade standards. This may include consideration of internal analyses, third party research and analytics including external credit ratings, internal risk ratings, default statistics, and other sources of information as appropriate for the particular security. Some institutions may have the resources to do most or all of the analytical work internally. Some, however, may choose to rely on third parties for much of the analytical work. While analytical support may be delegated to third parties, management may not delegate its responsibility for decision-making and should ensure that prospective third parties are independent, reliable, and qualified.

The board of directors should oversee management to assure that an appropriate decision-making process is in place.

The depth of the due diligence should be a function of the security's credit quality, the complexity of the structure, and the size of the investment. The more complex a security's structure, the more credit-related due diligence an institution should perform, even when the credit quality is perceived to be very high. Management should ensure it understands the security's structure and how the security may perform in different default environments, and should be particularly diligent when purchasing structured securities.³ The OCC expects national banks and Federal savings associations to consider a variety of factors relevant to the particular security when determining whether a security is a permissible and sound investment. The range and type of specific factors an institution should

consider will vary depending on the particular type and nature of the securities. As a general matter, a national bank or Federal savings association will have a greater burden to support its determination if one factor is contradicted by a finding under another factor.

The following matrix provides examples of factors for national banks and Federal savings associations to consider as part of a robust credit risk assessment framework for designated types of instruments. The types of securities included in the matrix require a credit-focused pre-purchase analysis to meet the investment grade standard or safety and soundness standards. Again, the matrix is provided as a guide to better inform the credit risk assessment process. Individual purchases may require more or less analysis dependent on the security's risk characteristics, as previously described.

Key factors	Corporate bonds	Municipal government general obligations	Revenue bonds	Structured securities
Confirm spread to U.S. Treasuries is consistent with bonds of similar credit quality	X	X	X	X
Confirm risk of default is low and consistent with bonds of similar credit quality	X	X	X	X
Confirm capacity to pay and assess operating and financial performance levels and trends through internal credit analysis and/or other third party analytics, as appropriate for the particular security	X	X	X	X
Evaluate the soundness of a municipal's budgetary position and stability of its tax revenues. Consider debt profile and level of unfunded liabilities, diversity of revenue sources, taxing authority, and management experience		X		
Understand local demographics/economics. Consider unemployment data, local employers, income indices, and home values		X	X	
Assess the source and strength of revenue structure for municipal authorities. Consider obligor's financial condition and reserve levels, annual debt service and debt coverage ratio, credit enhancement, legal covenants, and nature of project			X	
Understand the class or tranche and its relative position in the securitization structure				X
Assess the position in the cash flow waterfall				X
Understand loss allocation rules, specific definition of default, the potential impact of performance and market value triggers, and support provided by credit and/or liquidity enhancements				X
Evaluate and understand the quality of the underwriting of the underlying collateral as well as any risk concentrations				X
Determine whether current underwriting is consistent with the original underwriting underlying the historical performance of the collateral and consider the affect of any changes				X
Assess the structural subordination and determine if adequate given current underwriting standards				X
Analyze and understand the impact of collateral deterioration on tranche performance and potential credit losses under adverse economic conditions				X

³ For example, a national bank or Federal savings association should be able to demonstrate an

understanding of the effects on cash flows of a

structured security assuming varying default levels in the underlying assets.

Additional Guidance on Structured Securities Analysis

The creditworthiness assessment for an investment security that relies on the cash flows and collateral of the underlying assets for repayment (*i.e.*, a structured security) is inherently different from a security that relies on the financial capacity of the issuer for repayment. Therefore, a financial institution should demonstrate an understanding of the features of a structured security that would materially affect its performance and that its risk of loss is low even under adverse economic conditions. Management's assessment of key factors, such as those provided in this guidance, will be considered a critical component of any structured security evaluation. Existing OCC guidance, including OCC Bulletin 2002-19, "Supplemental Guidance, Unsafe and Unsound Investment Portfolio Practices," states that it is unsafe and unsound to purchase a complex high-yield security without an understanding of the security's structure and performing a scenario analysis that evaluates how the security will perform in different default environments. Policies that specifically permit this type of investment should establish appropriate limits, and pre-purchase due diligence processes should consider the impact of such purchases on capital and earnings under a variety of possible scenarios. The OCC expects institutions to understand the effect economic stresses may have on an investment's cash flows. Various factors can be used to define the stress scenarios. For example, an institution could evaluate the potential impact of changes in economic growth, stock market movements, unemployment, and home values on default and recovery rates. Some institutions have the resources to perform this type of analytical work internally. Generally, analyses of the application of various stress scenarios to a structured security's cash flow are widely available from third parties. Many of these analyses evaluate the performance of the security in a base case and a moderate and severe stress case environment. Even under severe stress conditions, the stress scenario analysis should determine that the risk of loss is low and full and timely repayment of principal and interest is expected.

Maintaining an Appropriate and Effective Portfolio Risk Management Framework

The OCC has had a long-standing expectation that national banks implement a risk management process

to ensure credit risk, including credit risk in the investment portfolio, is effectively identified, measured, monitored, and controlled. The 1998 *Interagency Supervisory Policy Statement on Investment Securities and End-User Derivatives Activities* (Policy Statement) contains risk management standards for the investment activities of banks and savings associations.⁴ The Policy Statement emphasizes the importance of establishing and maintaining risk processes to manage the market, credit, liquidity, legal, operational, and other risks of investment securities. Other previously issued guidance that supplements OCC investment standards are OCC 2009-15, "Risk Management and Lessons Learned" (which highlights lessons learned during the market disruption and re-emphasizes the key principles discussed in previously issued OCC guidance on portfolio risk management); OCC 2004-25, "Uniform Agreement on the Classification of Securities" (which describes the importance of management's credit risk analysis and its use in examiner decisions concerning investment security risk ratings and classifications); and OCC 2002-19, "Supplemental Guidance, Unsafe and Unsound Investment Portfolio Practices" (which alerts banks to the potential risk to future earnings and capital from poor investment decisions made during periods of low levels of interest rates and emphasizes the importance of maintaining prudent credit, interest rate, and liquidity risk management practices to control risk in the investment portfolio).⁵

National banks and Federal savings associations must have in place an appropriate risk management framework for the level of risk in their investment portfolios. Failure to maintain an adequate investment portfolio risk management process, which includes understanding key portfolio risks, is considered an unsafe and unsound practice.

Having a strong and robust risk management framework appropriate for the level of risk in an institution's investment portfolio is particularly critical for managing portfolio credit risk. A key role for management in the oversight process is to translate the

board of directors' tolerance for risk into a set of internal operating policies and procedures that govern the institution's investment activities. Policies should be consistent with the organization's broader business strategies, capital adequacy, technical expertise, and risk tolerance. Institutions should ensure that they identify and measure the risks associated with individual transactions prior to acquisition and periodically after purchase. This can be done at the institutional, portfolio, or individual instrument level. Investment policies also should provide credit risk concentration limits. Such limits may apply to concentrations relating to a single or related issuer, a geographical area, and obligations with similar characteristics. Safety and soundness principles warrant effective concentration risk management programs to ensure that credit exposures do not reach an excessive level.

The aforementioned risk management policies, principles, and due diligence processes should be commensurate with the complexity of the investment portfolio and the materiality of the portfolio to the financial performance and capital position of the institution. Investment review processes, following the pre-purchase analysis, may vary from institution to institution based on the individual characteristics of the portfolio, the nature and level of risk involved, and how that risk fits into the overall risk profile and operation of the institution. Investment portfolio reviews may be risk-based and focus on material positions or specific groups of investments or stratifications to enable analysis and review of similar risk positions.

As with pre-purchase analytics, some institutions may have the resources necessary to do most or all of their portfolio reviews internally. However, some may choose to rely on third parties for much of the analytical work. Third party vendors offer risk analysis and data benchmarks that could be periodically reviewed against existing portfolio holdings to assess credit quality changes over time. Holdings where current financial information or other key analytical data is unavailable should warrant more frequent analysis. High quality investments generally will not require the same level of review as investments further down the credit quality spectrum. However, any material positions or concentrations should be identified and assessed in more depth and more frequently, and any system should ensure an accurate and timely risk assessment and reporting process that informs the board of material changes to the risk profile

⁴ On April 23, 1998, the FRB, FDIC, NCUA, OCC, and OTS issued the "Supervisory Policy Statement on Investment Securities and End-User Derivatives Activities." As issued by the OTS, the Policy Statement applied to both state and Federal savings associations.

⁵ Similar requirements also apply to Federal savings associations as set forth in OTS Examination Handbook Section 540, *Investment Securities* (January 2010).

and prompts action when needed. National banks and Federal savings associations should have investment portfolio review processes that effectively assess and manage the risks in the portfolio and ensure compliance with policies and risk limits. Institutions should reference existing regulatory guidance for additional supervisory expectations for investment portfolio risk management practices.

Dated: June 4, 2012.

BILLING CODE 4810-33-P

SECURITIES AND EXCHANGE COMMISSION

17 CFR Part 275

[Release No. IA-3418; File No. S7-18-09]

RIN 3235-AK39

Political Contributions by Certain Investment Advisers: Ban on Third-Party Solicitation; Extension of Compliance Date

AGENCY: Securities and Exchange Commission.

ACTION: Final rule; extension of compliance date.

SUMMARY: The Securities and Exchange Commission (“Commission” or “SEC”) is extending the date by which advisers must comply with the ban on third-party solicitation in rule 206(4)-5 under the Investment Advisers Act of 1940, the “pay to play” rule. The Commission is extending the compliance date in order to ensure an orderly transition for advisers and third-party solicitors as well as to provide additional time for them to adjust compliance policies and procedures after the transition.

DATES: *Effective date:* The effective date for this release is June 11, 2012. The effective date for the ban on third-party solicitation under rule 206(4)-5 of the Investment Advisers Act of 1940 remains September 13, 2010.

COMPLIANCE DATE: The compliance date for the ban on third-party solicitation is extended until nine months after the compliance date of a final rule adopted by the Commission by which municipal advisor firms must register under the Securities Exchange Act of 1934. Once such final rule is adopted, we will issue the new compliance date for the ban on third-party solicitation in a notice in the **Federal Register**.

FOR FURTHER INFORMATION CONTACT:

Vanessa M. Meeks, Attorney-Adviser, or

Melissa A. Rovers, Branch Chief, at (202) 551-6787 or IArules@sec.gov, Office of Investment Adviser Regulation, Division of Investment Management, U.S. Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-8549.

SUPPLEMENTARY INFORMATION: On July 1, 2010, the Commission adopted rule 206(4)-5 [17 CFR 275.206(4)-5] (the “Pay to Play Rule”) under the Investment Advisers Act of 1940 [15 USC 80b] (“Advisers Act”) to prohibit an investment adviser from providing advisory services for compensation to a government client for two years after the adviser or certain of its executives or employees (“covered associates”) make a contribution to certain elected officials or candidates.¹ As adopted, rule 206(4)-5 also prohibited an adviser and its covered associates from providing or agreeing to provide, directly or indirectly, payment to any third-party for a solicitation of advisory business from any government entity on behalf of such adviser, unless such third-party was an SEC-registered investment adviser or a registered broker or dealer subject to pay to play restrictions adopted by a registered national securities association (the “third-party solicitor ban”).² Rule 206(4)-5 became effective on September 13, 2010, and, as adopted, the third-party solicitor ban’s compliance date was September 13, 2011. This compliance date was intended to provide advisers and third-party solicitors with sufficient time to conform their business practices to the rule, and to revise their compliance policies and procedures to prevent a violation. In addition, the transition period was intended to provide an opportunity for a registered national securities association to adopt a pay to play rule and for the Commission to assess whether that rule met the requirements of rule 206(4)-5(f)(9)(ii)(B).³ It was our understanding

¹ *Political Contributions by Certain Investment Advisers*, Investment Advisers Act Rel. No. 3043 (July 1, 2010) [75 FR 41018 (July 14, 2010)] (“Pay to Play Release”).

² See *id.* at Section II.B.2.(b). The Commission must find, by order, that those restrictions: (i) Impose substantially equivalent or more stringent restrictions on broker-dealers than the Pay to Play Rule imposes on investment advisers; and (ii) are consistent with the objectives of the Pay to Play Rule.

³ See note 2. While rule 206(4)-5 applies to any registered national securities association, the Financial Industry Regulatory Authority, or FINRA, is currently the only registered national securities association under section 19(a) of the Securities Exchange Act of 1934 [15 U.S.C. 78s(b)]. As such, for convenience, we will refer directly to FINRA in this Release when describing the exception for certain broker-dealers from the third-party solicitor ban.

at the time, and it still is, that FINRA is planning to propose a rule that would meet those requirements, but we also suggested that we may need to take further action to ensure an orderly transition.⁴

Not long after the Pay to Play Rule was adopted, Congress created a new category of Commission registrants called “municipal advisors” in the Dodd-Frank Act. The statutory definition of municipal advisor includes persons that undertake “a solicitation of a municipal entity.”⁵ These solicitors would be registered with us and also subject to regulation by the Municipal Securities Rulemaking Board (“MSRB”). In September 2010, we adopted an interim final rule establishing a temporary means for municipal advisors to satisfy the registration requirement.⁶ In December 2010, we proposed permanent rules and forms that would interpret the term “municipal advisor” and create a new process by which municipal advisors must register with the SEC.⁷ On January 14, 2011, the MSRB requested comment on a draft proposal to establish a number of rules applicable to municipal advisors, including a pay to play rule.⁸ In December 2011, we extended the expiration date of the interim final rule to September 30, 2012.⁹

With the understanding that municipal advisors would be subject to permanent registration requirements with the Commission and could be subject to an MSRB pay to play rule, on June 22, 2011, we amended the Pay to Play Rule to add municipal advisors to the categories of registered entities—referred to as “regulated persons”—excepted from the rule’s third-party solicitor ban.¹⁰ For a municipal advisor to qualify as a “regulated person,” it must be registered with us as such and subject to a pay to play rule adopted by the MSRB. In addition, the Commission
